**Administrative Report**

---

March 5, 2009

Dear Readers:

This Biennial Report is being published in 2009 even though it covers the years of 2005-2006. The Biennial Report for 2003-2004 was never published. As you will see through reading the Administrative Report section of this publication, in 2004, LB 962 was initiated which was a major change in water law. During the last several years, the Department was working through changes in process under this new law; initiating new programs to meet the Republican River Settlement; working with Colorado, Wyoming, and the Federal government on the Platte River Recovery Program; and dealing with a continuing drought situation. These major activities took priority over the publication of the Biennial Report and are the reason the 2003-2004 report was never published and the reason why this report is so late.

The Department hopes to continue this publication, at least through making it available on the Department's website and is in the process of putting the 2007-2008 report together.

## Department of Natural Resources

### NEW DEVELOPMENTS

#### Director Patterson Retires

Roger Patterson, Director of the Department since January 1999, retired August 19, 2005. Roger began as the Director of the Department of Water Resources, and then became the Director of the Department of Natural Resources when the Department of Water Resources was merged with the Nebraska Natural Resources Commission. Roger helped negotiate settlements to the U.S. Supreme Court cases with Wyoming on the North Platte River and with Kansas and Colorado on the Republican River. Roger helped form the current Water Policy Task Force and worked with them to bring about LB 962, a major change in Nebraska water law. Ann Bleed was appointed as Acting Director upon Roger's retirement.

#### Ann Bleed Appointed Director

On January 3, 2006, Governor Dave Heineman appointed Ann Bleed to serve as the Director of the Department. Director Bleed has been with the Department since 1988 and served as the State Hydrologist from 1988 to 2000 at which time she became the Deputy Director. Ann holds degrees in ecology and industrial and management systems engineering and earned her doctorate at the University of Wisconsin-Madison. Ann hired Brian Dunnigan to serve as Deputy Director. Brian is a registered engineer who has worked for the Department for 20 years.

#### Nebraska Platte-Republican Conservation Reserve Enhancement Program (CREP)

On March 19, 2005, Governor Heineman and Deputy Under Secretary of Agriculture Floyd Gaibler signed an agreement approving the State's application for a Conservation Reserve Enhancement Program (CREP). The agreement establishes the Nebraska Platte-Republican Conservation Reserve Enhancement Program. The CREP is part of the federal conservation reserve program (CRP) which was authorized in 1985 with the goal of establishing habitat cover on highly erodible cropland. While the CRP was established to enroll individual parcels of land, the CREP is based on dealing with problems on an area basis. The Nebraska CREP is the first one of its kind. While other approved CREP areas have dealt with water quality and related environmental issues only, the Nebraska CREP is being used to conserve water quantity.

The goals of the Nebraska Platte-Republican CREP are to convert 100,000 acres of irrigated land to grass or similar habitat cover, thereby significantly reducing the amount of irrigation water consumption, improving fish and wildlife habitat, and preventing agricultural chemicals and sediment from entering waters of the state. In exchange, the landowner would be paid an annual payment for a period of ten or fifteen years that would approximate current irrigation rental rates. This payment is made by the U.S. Farm Service Agency. The landowner will also receive financial assistance for the cost of establishment of habitat cover. This payment is split between funds from the State of Nebraska, through the Department of Natural Resources, and funds from the U.S. Farm Service Agency. The Department has committed to pay up to five million dollars for its share of habitat establishment costs. The federal cost over the contract period is estimated at 158 million dollars. Non-federal entities including state agencies,

## Report of the

local natural resources districts and irrigation districts will provide in-kind matching, which along with the five million dollars from the Department, must provide 20 percent of the total program costs.

The Department entered into a water use contract with each participant to insure that the enrolled cropland will not be irrigated and that the water that was previously used for the enrolled acres is not applied to other lands or is diverted for other purposes. In 2005-2006, the Department received 635 applications for contracts. By September 30, 2006, the annual report indicates that the Department had contracted for 43,266.26 acres.

The program is eligible only for areas located in the Republican River Basin and the Platte River Basin. The eligible area includes approximately two and one-half miles on each side of the Republican River and its major tributaries, two miles on each side of the North Platte and Platte Rivers down to the Kearney Canal diversion, plus all project surface water areas along those river reaches.

The acreage goal for enrollment is 100,000 acres equally divided between the Platte and Republican River areas. For the Platte River Basin, up to 40,000 acres may be enrolled below Lake McConaughy and 10,000 acres above Lake McConaughy. The 10,000 acres above Lake McConaughy is further divided as being up to 5,000 acres served solely by ground water wells and 5,000 acres served by either ground water wells and/or surface water sources.

### Republican River Basin Environmental Quality Incentives Program (EQIP)

The Department, the U.S. Natural Resources Conservation Service (NRCS) and the Republican River Basin natural resources districts entered into an innovative partnership as part of the NRCS administered Environmental Quality Incentives Program (EQIP) to reduce irrigated cropland acres and water use in the basin. The "Nebraska Ground and Surface Water Special Incentives" practice is targeted to the Republican River Basin because of the water supply issues in that basin and the need to meet the requirements of the Republican River Compact.

Landowners who voluntarily enroll in the program cannot irrigate the enrolled acres, but may raise crops under dry land conditions. The practice, which began in 2004, provides for federal payments of \$50 per acre for three years and requires the landowner/operator to not irrigate for four years. Only a very few acres (approximately 600) were enrolled in the program in 2004 because the NRCS payment was not considered adequate compensation. As a result the Department agreed to provide a one-time incentive payment of \$100 per acre in 2005 to attract more interest. NRCS allocated \$1,500,000 to the program for 2005 and the Department has agreed to provide \$1,000,000 which will enroll a total of 10,000 acres. Initial enrollment was approximately 150 applications that exceeded the 10,000 acre limitation. Sixty percent of the acreage was in the Lower Republican Natural Resources District with most of the rest being in the Middle Republican Natural Resources District. There was minimal sign-up in the Upper Republican Natural Resources District.

## Department of Natural Resources

### Pumpkin Creek Environmental Quality Incentives Program (PCEQIP)

The Department, NRCS, and the North Platte Natural Resources District entered into a cooperative agreement to offer another EQIP program in the Pumpkin Creek (also known as Pumpkinseed Creek) Watershed. This program was different than the EQIP program described above in that it required a permanent retirement of irrigation from the land enrolled. The purpose of the program was to reduce the consumptive use of ground water and surface water in the Pumpkin Creek Watershed.

Landowners had to meet the eligibility requirements of both the federal EQIP and the PC EQIP. To be eligible, landowners had to participate in the federal EQIP, the well or wells used to irrigate the property had to lie within the North Platte Natural Resources District's Pumpkin Creek Ground Water Management Sub-Area, and the property had to be certified as irrigated acreage by the natural resources district. The landowners contracted and conveyed a perpetual easement to the North Platte Natural Resources District relinquishing all rights to irrigate the property. All existing wells had to be decommissioned or their capacity reduced in a manner satisfactory to the Department and the natural resources district.

The program was to retire 2,500 irrigated acres, and 27 applications were received amounting to 2,794 acres. Landowners would be paid \$75 per acre from the natural resources district and \$75 per acre from the Department. This \$150 would be in addition to payments from the NRCS which could amount up to \$300 per acre.

### Republican River Environmental Quality Incentives Program (REPEQIP)

Like the Pumpkin Creek EQIP, the Republican River Environmental Quality Incentives Program was a cooperative agreement between the Department, the NRCS, and the Upper Republican, Lower Republican and Middle Republican Natural Resources Districts. This again was a permanent retirement of irrigated acres.

Eligibility requirements were the same as the PC EQIP, with additional requirements being that all lien holders on the property must be willing to subordinate their liens to the Easement, and the Landowner must pay the Middle Republican Natural Resources District a \$100 deposit for a title search and recording fees. In this program, the Department is paying \$250 per acre, and the natural resources districts will pay \$125 per acre. The total budget allowed for this program was \$669,000.

### Floodplain Management Division Receives State And National Recognition

The Department's Floodplain Management Division received the Tom Lee Award for Excellence for "Comprehensive Floodplain Management Program with Special Strengths in Mitigation, Planning, Mapping and Community Outreach." This award is given annually by the Association of State Floodplain Managers.

## Report of the

### Staff Members Receive Recognition

Jim Williams, Kim Menke and Josh Lear won the "Excellence in GIS Award" for the development of the Large Area Mapping Initiative (LAMI.) This award is presented by the Nebraska GIS/LIS Association to highlight outstanding examples of Geographic Information Systems excellence. Department intern Ryan Jester won the Student GIS Award from the same association. This award is given to individuals who are actively involved with, learning about, and promoting GIS technologies. Ryan won the award for the creation and implementation of 93 countywide ArcReader maps.

Deputy Director Brian Dunnigan was one of ten state officials to represent all fifty states at a National Map Modernization Conference. Definition of a flood risk, section 7 MHIP quality standards, levees, and LOMC delegation to states were the four main topics discussed at the conference.

Jim Williams was chosen to testify on behalf of the Association of State Floodplain Managers before the Subcommittee on Housing and Community Opportunity House Committee on Financial Services in Washington D.C. on the implementation of FEMA's flood map modernization program.

### Legislative Update/2005 Session

#### LB 335

The Safety of Dams and Reservoirs Act was adopted by enactment of this legislation. The Act was a coordinated effort by the Department to codify the Department's practices and the suggestions of a national review committee on the Safety of Dams. Definitions, procedures, requirements for approval of dam permits, inspections, and regulation were all included in the legislation. This bill also included a section that changed the Industrial Ground Water Regulatory Act to make it clear that a public water supplier using water for industrial purposes was exempt from the provisions of the Industrial Ground Water Regulatory Act.

#### LB 342

The Technical Advisory Committee to the Natural Resources Commission which assisted in the coordination and dissemination of information from the soil and water data bank was eliminated by enactment of this bill.

### Legislative Update/2006 Session

#### LB 508

LB 508 changed cost-share provisions for the Water Well Decommissioning Fund administered by the Department to: (1) ensure that landowners would be compensated at least 60 percent for decommissioning illegal wells; and (2) allow allocations to natural resources districts from the Fund for cost-shares based upon three-year averages. The bill changed the definition of a replacement well, allowed natural resources districts to further define replacement wells,

## Department of Natural Resources

changed the time period by which the original well had to be decommissioned when drilling a replacement well, added a provision that allowed the original well to be modified and recertified to pump 50 gallons per minute or less and imposed restrictions on consumptive use. The Water Well Standards and Contractors' Licensing Act was modified. The bill also modified the irrigation water reuse pit statutes.

### LB 1226

LB 1226 was an omnibus bill of the Natural Resources Committee. The bill created and provided funding to the Interrelated Water Management Plan Program in order to facilitate and fund duties of natural resources districts arising under the Ground Water Management and Protection Act. The annual appropriation for funding under the grant program was \$2.5 million per year for two years. The grant program is administered by the Department and the Natural Resources Commission.

LB 1226 increased the taxing and spending authorities of natural resources districts in fully or over appropriated basins. The bill clarified the language regarding the Department's notice and hearing procedures on surface water cancellations and relinquishments. Language was added to the adjudication statutes that allowed irrigation district and canal companies to reassign rights to other lands within the district or company area that had been cancelled due to voluntary relinquishments. The bill also modified certain requirements regarding surface water transfers, including the requirement that entities owning or using facilities to be used receive notice, and an applicant's duties to record temporary transfers in the County.

Under the provisions enacted by LB 1226, water well contractors or pump installation contractors are now required to notify the Department on any modifications of water wells within 60 days of the modification. Public water suppliers filing a notice of intent or notice of renewal must provide a copy of the notice to the owners of land falling within the spacing protection area. The statute requiring persons intending to withdraw ground water from any water well and transport of that water off the overlying land for use as augmenting water supplies in a Nebraska wetland or natural stream for the purpose of benefiting fish or wildlife or producing other environmental or recreational benefits to obtain a permit from the local natural resources district was modified to make it clear that certain additional permits may also be needed.

One of the major amendments included within LB 1226 was language that allows a natural resources district which has imposed a limit or prohibition on additional irrigated acres or consumptive uses under their ground water management plan to request the Department place an immediate stay on new surface water appropriations.

The laws governing the determination of fully appropriated basins were modified. A requirement was added that the Department must use the best methodologies as well as the best scientific data in developing the annual report of water of interrelated ground and surface water supplies in the state's basins. Construction of new wells in areas determined to be fully appropriated were allowed if a permit for construction was issued prior to the determination. Increases in ground water irrigated acres from such wells could, however, be subject to conditions imposed

## **Report of the**

by the natural resources district, and a district could treat them differently from wells which existed prior to the declaration of fully appropriated.

Municipal and industrial wells were provided certain exemptions from limitations on the use of ground water through integrated management plans, rules, or orders after November 1, 2005, until January 1, 2026. Per capita allowances for limits on amounts of ground water used for governmental, commercial, and industrial uses were established based on geographic location and populations. Exemptions to these limits would be allowed through approved municipal conservation plans.

### Lower Loup Natural Resources District Moratorium

On March 1, 2006, the Lower Loup Natural Resources District passed a moratorium on new ground water wells within its district. This was followed up with a request to the Department of Natural Resources to place a stay on new surface water rights. This stay was granted on September 11, 2006, to be in effect until January 1, 2008. The purpose was to allow more time to study the district's water supply to prevent being determined fully appropriated.

### Ground Water Management And Protection Act Implementation

In 2005 and 2006 the Department worked with natural resources districts on implementation of the Ground Water Management and Protection Act. Much of that activity centered on new requirements adopted with passage of LB 962 in 2004. Under those provisions the Department annually makes a determination on whether any additional basins have become fully appropriated. A fully appropriated basin is where existing uses of both surface water and hydrologically connected ground water supplies are equal to but do not exceed the available water supplies over the long term. In those areas that are fully or over appropriated the Department and the respective natural resources district are charged with jointly developing and implementing an integrated surface water and ground water management plan.

Stays on new uses of surface water and ground water are also implemented in fully and over appropriated areas until a plan is in place or the stays are removed by the respective natural resources district following a public hearing. Districts may also impose moratoriums on new well permits or to prevent the expansion of new consumptive ground water uses through provisions of the Ground Water Management and Protection Act.

Initial fully appropriated determinations and the over appropriated designation along with related activity due to changes brought about by LB 962 occurred in 2004. The new activities related to LB 962 (2004) and the moratoriums imposed by the natural resources districts occurring in 2005 and 2006 are detailed below.

#### **Fully Appropriated Designations**

December 20, 2005 – a portion of the Upper Platte Basin including portions of Tri-Basin NRD, Little Blue NRD, and Upper Big Blue NRD were determined to be preliminarily fully appropriated.

## Department of Natural Resources

April 21, 2006 – a portion of the Upper Platte Basin including portions of Tri-Basin NRD and Upper Big Blue NRD were determined to be fully appropriated.

### Integrated Management Plans

Upper Republican NRD – The Integrated Management Plan was adopted in May 2005 and was implemented subsequent to that.

Middle Republican NRD – The Integrated Management Plan was adopted in December 2004 and was implemented in 2005.

Lower Republican NRD – The Integrated Management Plan was adopted in May 2005 and was implemented subsequent to that.

Upper Niobrara White NRD, North Platte NRD, South Platte NRD, Twin Platte NRD, Central Platte NRD, and Tri-Basin NRD – Work was continued on the Integrated Management Plans with the respective stakeholder groups.

Upper Big Blue NRD – work had not yet begun on the Integrated Management Plan.

Over appropriated Basin Plan – Work was continued on this plan with the stakeholder group.

### Ground Water Stays

Stays (related to the fully appropriated determinations and the over appropriated designation) on new ground water irrigated acres and new well construction permits were in place in the entirety of Upper Republican NRD, Middle Republican NRD, Lower Republican NRD, North Platte NRD, and South Platte NRD. The same stays were in place in the over appropriated area of Twin Platte NRD and Central Platte NRD and the over appropriated and fully appropriated areas and the Republican Basin portion of Tri-Basin NRD and the fully appropriated portion of Upper Big Blue NRD and Upper Niobrara White NRD.

### Surface Water Stays

Stays (related to fully appropriated determinations and the over appropriated designation) on new surface water appropriations and new surface water irrigated acres were in place in the entirety of Upper Republican NRD, Middle Republican NRD, Lower Republican NRD, the Platte Basin upstream of the Loup confluence, and in the Hat Creek Basin, the White River Basin, the portion of the Niobrara River Basin upstream of the Mirage Flats diversion dam, the Snake Creek subbasin, and the Box Butte Creek subbasin.

### Moratoriums

The Upper Niobrara White NRD instituted a moratorium on new well permits on the non-fully appropriated portion of their district in late 2004, and so for 2005 and 2006, the entire district was under a stay or moratorium.

## **Report of the**

The Central Platte NRD instituted a moratorium district-wide on new well permits, new acres and increased or expanded uses of ground water for beneficial uses in February 2006. So after that, the entire district was covered by a stay or moratorium.

The Twin Platte NRD instituted a district-wide moratorium on new well permits in February 2006. So after that, the entire district was covered by a stay or moratorium.

The Nemaha NRD instituted a district-wide moratorium on new well permits in May 2006.

The Little Blue NRD instituted a moratorium on new well permits and the new acres in Hydrologic Unit 8 in March 2006.

### Integrated Water Information Project

The Integrated Water Information Project mission is to integrate geospatial, tabular, and all other information for ground water, surface water, and dam safety such that one information system is used agency-wide and is available for public access. At the end of 2006, DNR completed improved workflows to streamline project efficiency by eliminating duplicate efforts and reducing unnecessary work. The tasks needed to accomplish the improved workflows were outlined and prioritized. An enhanced surface water rights web interface was produced and presented to the public. Surface water rights project was modified to use the centralized contacts data structure. The above efforts are the foundation for a one-stop information system within DNR.

**Department of Natural Resources**

ONGOING ACTIONS

Missouri River

After a year of stakeholder, technical and plenary group meetings, the Corps of Engineers in their draft 2006 Annual Operating Plan have released criteria for a spring pulse flow for 2006 and subsequent years. Although no consensus on a spring pulse flow was found, the Corps of Engineers used much of the information from the groups to set the criteria. The plan calls for two spring pulses annually, the first coinciding with the start of the navigation season and the second beginning between May 1 and May 19. If the pulses occur in 2006, the first peak would increase flows by 5,000 cubic feet per second for two days and the second is expected to increase flows by 12,000 cubic feet per second for two days as well.

A coalition of states and tribes are in the process of forming the Missouri River Association of States and Tribes (MoRAST.) The purpose of MoRAST will be to address issues of concern to the basin states relating to the Missouri River and its ecosystem. The organization will consolidate the work done by existing multi-state and tribal Missouri River organizations into one that will be able to speak on all issues with one voice.

Funds

Nebraska Natural Resources Development Fund (NRDF)

Established by the Legislature in 1974, the NRDF provides financial assistance for local water resources projects. To date the NRDF has sponsored or co-sponsored 68 projects with nineteen Natural Resources Districts, six irrigation districts, and twelve municipalities. A number of the projects have been tied to Corps of Engineers Section 205 flood reduction projects or the Natural Resources Conservation Service P.L. 566 Small Watersheds Program to stretch funding as far as possible. Flood control projects continue to demonstrate their effectiveness year after year while the public is heavily utilizing recreation facilities many of these projects provide. With the growing demand for water-based recreation, the importance of adequate inflow and excellent water quality are key factors in project planning and are carefully considered to assure delivery of broad and long-term benefits.

Nebraska Soil and Water Conservation Fund (NSWCF)

The Nebraska Soil and Water Conservation Fund was established in 1977 to provide cost-share funds to private landowners to install eligible soil and water conservation practices. The Natural Resources Commission approves rules and regulations for the fund, the list of eligible practices, and the annual allocation of funds. The administration of the fund is handled jointly by the Department and the State's Natural Resources Districts, and the Natural Resources Conservation Services (USDA) provides technical assistance.

## **Report of the**

Interrelated Water Management Plan Program Fund (IWMPPF) must be added

The Interrelated Water Management Plan Program (IWMPP) was created in 2006 with the passage of LB 1226 Section 20. This grant program is intended to facilitate the duties of Natural Resource Districts (NRDs) arising under the Nebraska Ground Water Management and Protection Act, and to help offset costs incurred in performing those duties.

This program fund is administered by the Natural Resources Commission (the Commission) and DNR upon recommendations of the NRC. Funds appropriated from the program are allocated by the Commission to NRDs based on guidelines adopted by the Commission. Amounts requested and approved must be supported by a minimum local revenue match comprising twenty percent (20%) of the total project cost.

### **Small Watershed Flood Control Fund (SWFCF)**

This program provides state funding for the acquisition of necessary land rights for local flood control projects. The Small Watersheds Flood Control Fund was established by the Legislature in 1963 when the federal P.L. 566 Small Watersheds Flood Control program was very active in Nebraska. Nearly 900 watershed dams have been constructed in Nebraska and their development has involved the issuance of storage permits and storage use permits, along with periodic dam safety inspections.

### **Water Well Decommissioning Fund (WWDF)**

The 1994 Legislature established the Water Well Decommissioning Fund to provide cost-share dollars to assist landowners in the decommissioning of abandoned or unused wells to prevent them from being a conduit for pollutants to the ground water aquifer, as well as being a safety hazard. This program is operated under rules and regulations established by the Natural Resources Commission and administered jointly by the Department and the participating Natural Resources Districts. While the original source of funds for this program was a general fund appropriation, since August of 1999 a portion of each well registration fee received by the Department is deposited in this fund and used for the purposes of the fund.

### **Natural Resources Water Quality Fund (NRWQF)**

Beginning in June of 2001 the Natural Resources Water Quality Fund replaced the Natural Resources Enhancement Fund. A portion of pesticide registration fees and pesticide applicators license fees paid to the Nebraska Department of Agriculture are deposited in this new fund. The funds available are passed through to Natural Resources Districts (NRDs) to support their water quality program. NRDs must provide three dollars from their own funds for their water quality funds for each two dollars received from the Natural Resources Water Quality Fund. Approximately \$1,250,000 are made available to NRDs each year.

## Department of Natural Resources

### Flood Mitigation

**Flood Mitigation:** Flood mitigation has changed quite a bit since the last update in 2000. The biggest changes are a necessary change of focus on “repetitive loss” properties, requirements for mitigation planning, and in the increase in number of FEMA mitigation programs.

**Repetitive Loss:** The National Flood Insurance Program (NFIP) has been in a fight for solvency, which was made much more difficult in the aftermath of Hurricane Katrina and its \$17 billion in claims to the NFIP. Large drains on the National Flood Insurance Fund come from “repetitive loss” properties, which are defined specifically in statute as having had at least two claims in excess of \$1000 in any ten-year period. For example there are repetitive loss properties in DeWitt because of claims filed on the same property from the floods of 1984 and 1993 – with a ten year period. It is estimated that repetitive loss properties amount to only 2% of the total NFIP policies, but account for 40% of the claims. By mitigating these repetitive loss properties, the solvency of the NFIP can be more easily ensured without asking for Congressional bailouts after heavy loss years like 2005 (Hurricanes Katrina, Rita, Wilma). Nebraska has 307 repetitive loss properties, and the five communities the most repetitive loss properties are: Sarpy County (117), Fremont (22), Dodge County (17), Douglas County (17), and Saunders County (17).

**Severe Repetitive Loss:** As the name suggests, severe repetitive loss properties are the “worst of the worst” properties which have made excessive claims against the NFIP – often well in excess of the value of the property. Some of these losses are natural while others are fraudulent since some dishonest people have learned how to “game” the system. Naturally, mitigating these worst offenders will benefit the National Flood Insurance Fund. This is why the Severe Repetitive Loss Mitigation Program was developed by FEMA (see below). Nebraska does not have any severe repetitive loss properties.

**Mitigation Planning:** The Disaster Mitigation Act of 2000 created the requirement that any community wishing to apply for FEMA mitigation project funds must have an adopted and approved hazard mitigation plan. This requirement was instituted with the Pre-Disaster Mitigation program, Hazard Mitigation Grant Program, and Flood Mitigation Assistance program. In Nebraska, to make most efficient use of limited resources, the primary focus has been to complete all-hazards mitigation plans for multi-jurisdictional areas – meaning natural resources districts or counties. The first NRD mitigation plan was approved in September 2006 for the Pappio-Missouri River NRD. There are several NRD and county plans currently ongoing.

### FEMA’s Mitigation Programs

**Pre-Disaster Mitigation (PDM) –** The PDM program is a nationally-competitive mitigation program which can fund mitigation projects for all hazards. Congress has the authority to allocate \$150 million for PDM each year, and starting in the 2007 cycle (which was announced in October 2006), each state is guaranteed at least \$500,000 each year. Looking back, the entire \$150 million has not been allocated each year; however, Congress has at least allocated some funds each year. The State of Nebraska has received PDM planning grants, but has not received a project grant under this program.

## Report of the

### Floodplain Management

The Floodplain Management Division is directed by statute to encourage communities in the state to implement a program of floodplain management and apply for participation in the National Flood Insurance Program.

The Department of Natural Resources is the state coordinating agency for the National Flood Insurance Program. These activities are conducted by the department's Floodplain Management Division.

As of December 31, 2006:

- 351 communities in Nebraska participate in the NFIP
- Of those:
- 340 communities participate in the Regular Program
  - 11 communities participate in the Emergency Program
  - 5 of those Emergency Program Communities are participating with flood hazards identified.
  - 4 communities are suspended from the NFIP
  - 71 communities are not participating in the program. Flood hazards have been identified in those communities

During Calendar Years 2005 and 2006:

- DNR mapped 19 counties for special flood hazards.
- Upon request, provided Base Flood Elevation information at 447 locations
- Provided 9 workshops for training of floodplain administrators
- Visits to 63 communities to meet with local boards or floodplain administrators to discuss floodplain management programs and the National Flood Insurance Program.
- Provided technical assistance and floodplain management ordinance/resolution information to counties or communities on 1220 occasions.
- Provided floodplain management, flood insurance, and flood zone information to the public on 1240 occasions.
- Assisted in establishing a non-profit organization (Nebraska Floodplain and Stormwater Managers Association) to promote sound floodplain and stormwater management practices in Nebraska.

## Department of Natural Resources

Severe Repetitive Loss Program (SRL) – SRL is the newest FEMA mitigation program and is another nationally-competitive mitigation program. The goal of the SRL program is to reduce or eliminate claims under the NFIP through project activities that will result in the greatest savings to the National Flood Insurance Fund (NFIF). To address the problems that severe repetitive loss properties represent to the NFIP (see above), SRL funds are being first targeted to states with 51 or more SRL properties. Since Nebraska has zero SRL properties, no further discussion is given.

Repetitive Flood Claim Program (RFC) – The RFC program was started in FY 2006 and has \$10 million allocated each year from Congress with the intent of reducing flood damages to insured properties that have had one or more claims to the NFIP. RFC is another nationally-competitive mitigation program. Eligible activities are limited to acquisition, elevation, dry floodproofing, or minor structural projects. The traditional 75% federal match can be moved to 100% if the applicant can demonstrate financial need. RFC is the only FEMA mitigation program which does not have a local mitigation plan requirement, but the State mitigation plan requirement still exists. Nebraska has not applied for RFC funds due to plentiful HMGP funds and because coastal states receive a higher priority for the limited amount of funds.

Hazard Mitigation Grant Program (HMGP) – The HMGP program is FEMA's oldest mitigation program. The defining difference for the HMGP is that it is funded directly to states as a result of a federally-declared disaster. If a state has no declared disasters, it gets no HMGP funds. However, the opposite is also true, and since Nebraska had its largest disaster on record in December 2006 (New Year's Ice Storm) and is currently flush with HMGP mitigation money.

Flood Mitigation Assistance Program (FMA) – The FMA program has lost a good deal of popularity with many states as HMGP funds have been plentiful and with the rising popularity of the PDM program. FMA planning funds can be used for flood mitigation planning only, which limits its usage since FEMA's well-funded mitigation programs require an all-hazards plan. FMA funds are distributed to states annually based on a formula which takes the number of flood insurance policies into consideration. Since Nebraska does not compare in this arena to the coastal states, Nebraska does not receive a great deal of FMA funds – typically about \$13,000 for planning and \$120,000 each year. Project funds must be used to benefit properties which have a flood insurance policy.

### Current Mitigation Activities at NDNR:

NDNR completed in-house mitigation plans for the City of Lexington, City of Valley, and Pappio-Missouri River NRD in the 2005 to 2006 timeframe. Using PDM funds, NDNR is completing all-hazards mitigation plans for Hall County, Elmwood, and South Bend. NDNR is also assisting consultants in the development of several NRD and countywide mitigation plans funded by PDM funds and by HMGP funds from the December 2006 New Year's Ice Storm federal declaration.

## Report of the

### Dam Safety Report

The State of Nebraska Dam Safety Program has seen quite a few advances in FY 2005 and 2006. Most importantly, the Safety of Dams & Reservoirs Act, was introduced by Senator Schrock on January 19, 2005 and signed by Governor Heineman on April 7, 2005 as part of LB 335. LB 335 went into effect on September 3, 2005.

The Act consolidates program authorization and legal requirements, provides for civil enforcement authority, updates and simplifies fee schedules, provides authority to establish dam safety rules and regulations, and incorporates other aspects of FEMA's Model Dam Safety Law.

Some of the highlights of LB 335:

- Makes it clear that dams that are regulated under a federal dam safety program may continue to be regulated primarily by the federal program provided that the federal program has objectives, standards, and requirements that meet or exceed the purposes of the Act, and the owner has entered into a cooperative agreement with the Department.
- Adds requirement that plans, specifications, and construction supervision be the responsibility of a licensed professional engineer.
- Provides that a city, village, or county may institute overlay zoning precluding construction of structures downstream of a state permitted dam that is classified as having other than a high hazard potential, if a breach inundation study performed by an engineer, in accordance with generally accepted engineering practice, determines that construction of such structures would require that such dam be reclassified as having a high hazard potential. The owners of such dam shall provide such engineering study as a condition to requesting overlay zoning.
- Allows department employees to enter onto private property, as necessary, to perform their official duties.
- Modifies the criteria for a jurisdictional size dam: Any dam 25 feet or more in height or having 50 acre-ft. or more maximum storage capacity; or any dam in a high hazard location regardless of size. The following exemptions exist: Any dam that is less than six feet tall or any dam with less than 15 acre-ft. total storage is exempt; also canal control structures and highway and railroad embankments are exempt unless they are intended to be dams.
- Removes requirements for repair, operation, and maintenance from the law because these types of work are not, and have not been regulated by the Department in the past.
- Changes the fee structure from the current one dollar per foot in height of dam to a flat fee to be established by rule and regulation of not to exceed two hundred dollars for dams less than twenty-five feet in height, three hundred dollars for dams twenty-five feet in height to not more than fifty feet in height, and four hundred dollars for dams in excess of fifty feet in height.
- Adds a civil penalty provision that provides that any person who violates the Act or an application approval, an approval to operate, a rule, a regulation, an order, or a requirement of the department under the Act may be assessed a civil penalty in an amount not to exceed five hundred dollars per day. The Department would have to bring an action in the court in the jurisdiction in which the violation occurred.

### Department of Natural Resources

- Adds “no fault” language with respect to the state, department, its employees and agents.
- Adds provision for the appointment of a consulting board to report on safety matters when requested by the owner.
- Expands on the authority of the department to investigate or require the owner to investigate, gather data, study, etc. as necessary for safety.
- Restates and expands on department authority to adopt rules and regulations.
- Expands on and strengthens the construction completion certification requirement for new or reconstructed dams.
- Adds requirement for the department to issue an approval to operate prior to the dam going into service.
- Expands on the department’s action and authority upon receipt of a complaint relative to a dam.
- Expands on the owner’s responsibilities and actions during emergencies. Also, provides the department authority to take control of a dam during an emergency.
- States requirements for dams completed prior to the enactment of LB 335.
- Expands on requirements for emergency action plans.

During this period, dam safety staff increased from 2.5 FTE’s to 4 FTE’s of which three are licensed professional engineers. The inspection schedule that had been over 700 dams behind is now current. The dam safety staff has taken over the responsibility for the inspection of significant hazard dams in the Lincoln field office area as recommended by the peer review by the Association of State Dam Safety Officials.

Cooperation with other agencies has been excellent. A major project, to verify and/or reclassify over 1,100 NRCS funded dams was completed in cooperation with the Natural Resources Conservation Service.

Our relationship with ASDSO has been extended and strengthened over this period and its help has been instrumental in the improvement of the program.

Our Federal Dam Safety grants average around \$90,000 per year and have been used for the staff augmentation discussed above. Of course, this helps us in all areas of our mission to keep the state’s dams safe.

In addition to the direct program work, staff also reviews applications for the Resources Development Fund and the Nebraska Environmental Trust Fund.

Other initiatives include work on a pocket-pc inspection checklist system that promises more efficient, better quality inspections due to automatic draft report production and reminders of what to look for during the inspection.

Probable Maximum Precipitation values are currently being studied by Applied Weather Associates for a new state-wide PMP rainfall maps for use in design of dams.

**Report of the**

The following two annual reports to FEMA through ASDSO contain a very detailed look at the key statistics of the program:

**National Dam Safety Review Board  
State Dam Safety Evaluation Report for  
July 1, 2005 – June 30, 2006**

DATE OF REPORT COMPLETION:	05/01/2006
STATE/AGENCY NAME:	Nebraska
AUTHOR:	Patrick J. Diederich, P.E.
TITLE:	Chief of Dam Safety
ADDRESS:	Department of Natural Resources 301 Centennial Mall South PO Box 94676 Lincoln, NE 68509-4676

Low	244
<b>Total</b>	<b>356</b>

**New Dam Construction Accomplishments**

A. Number of State regulated new dams (not enlargements) that have had construction permits approved during this reporting period.

<b>HAZARD POTENTIAL</b>	<b># PERMITS APPROVED</b>
High	1
Significant	2
Low	41
<b>Total</b>	<b>44</b>

## Report of the

### Planning And Assistance Division

In 2005 and 2006 the Natural Resources Planning and Assistance Division conducted state level planning work, organized research efforts in response to new provisions of the Groundwater Management and Protection Act, provided statewide mapping, provided technical assistance to the Director, and coordinated Departmental stream gaging efforts. Division activities discussed under other headings in this Biennial Report include Platte River Cooperative Agreement Efforts, North Platte Decree Implementation, Integrated Management Plan efforts, moratoriums and stays related to those efforts, Republican River Compact administration, and stream gaging.

Other Division activity included compilation of annual evaluations of the availability of hydrologically connected water supplies for 2006 and 2007, work on the Platte River Cooperative Hydrology Study (COHYST), work on the National Hydrography Dataset, cooperative work on the SSURGO digital soil survey effort, work on the Nebraska Rainfall Assessment and Information Network (NERAIN), and drafting, signing and monitoring agreements or task orders for ten separate research efforts designed to help implement new provisions of the Groundwater Management and Protection Act.

Of the items previously mentioned, the annual reports on hydrologically connected water supplies are among the Departmental activities receiving the most attention. Those reports must meet a statutory requirement to reach a preliminary conclusion on whether any additional basins, subbasins or reaches are fully appropriated beyond those previously identified by the Department. If the Department subsequently makes a final determination the basin is fully appropriated, a joint integrated management plan is prepared with the Department and the natural resources district working together to develop a plan to achieve a sustainable balance of surface water and ground water uses. The 2006 report was the first issued.

### Water Policy Task Force

The Water Policy Task Force was created in response to the passage of LB 1003 in 2002 and charged with addressing issues relating to Nebraska laws governing surface water and ground water use, including conjunctive use management. In December 2003 the Task Force issued a report to the Governor and legislature. In 2004 recommendations in the report became a basis for much of the language adopted with passage of LB 962, which made significant changes in how Nebraska addresses hydrologically connected ground water and surface water. Since that time the Task Force has continued to address a variety of water issues, including issues raised in implementation of LB 962.

The Task Force has 50 members with almost all appointed by the Governor and a few designated by virtue of their office. Members consist of five representatives from the Natural Resources Districts, four from the power industry, five from municipalities, three from agricultural groups, two from recreation interests, three from environmental interests, twenty irrigators representing Nebraska's river basins, four members serving at large, a representative from the Department of Natural Resources, a member from the Attorney General's Office, and the Chair and Vice-Chair of the Natural Resources Committee of the Legislature.

## Department of Natural Resources

The Water Policy Task Force met a total of eight times in 2005 and 2006. Task Force subcommittees that met during the period included: Funding, Municipalities, Surface Water Rights, Ground Water Rights, Sustainability and Instream Flow. The Task Force agreed on short-term funding recommendations. Members also provided input on potential legislative changes and provided input on a variety of issues arising from implementation of LB 962. An important role of the Task Force members is keeping their constituent group informed on the discussions of the Task Force and bringing input to the Task Force from people they are representing.

### Information Technology

The Information Technology staff was busy developing and enhancing software to support the CREP and EQIP programs. It was also processing more GIS data to share via the USGS National Map program. DNR is the prime supplier of Nebraska data to the National Map.

### North Platte Decree Committee

(Nebraska V Wyoming) 2001 - 2006

As mentioned in the previous biennial, the Bureau of Reclamation (Reclamation), Wyoming and Nebraska entered into a Final Settlement Stipulation that was presented to the special master on March 15, 2001, and approved by the Supreme Court on November 13, 2001. Many new procedures were outlined in the settlement documents. To keep all of the procedures on target, the settlement also created the North Platte Decree Committee (NPDC). The NPDC has met at least twice every year since 2001, with other special meetings scheduled as needed.

In the first year, the NPDC designated a chairperson and adopted a procedure for the rotation of the position of chair. In 2004, the position of NPDC chair rotated to the State of Wyoming and in 2006 it rotated to the State of Nebraska. Other procedural concerns were also addressed such as the designation of alternates, the management of official documents and the adoption of a working document on deadlines in the Modified Decree and Final Settlement Stipulation.

Each year, the NPDC has addressed various procedural items. In the first year, the NPDC agreed to continue the practice of sharing these costs of monitoring the five stream gages that had remote monitoring. In the spring of 2005 and 2006, the NPDC consented to an addendum to Exhibit 3 of the NPDC Charter, "2006 Procedures for Grayrocks Groundwater Temporary Storage Account." These addendums were accepted with the understanding that each was temporary procedure to deal with the extreme drought conditions the Laramie River Basin was experiencing.

In April, 2006, the committee approved proposed changes to Exhibit 3 which removed the Corn Creek Project because it was dissolved. In the fall of 2006, a workshop was scheduled to discuss revision of Appendix E to the Final Settlement Stipulation, allocation of water during periods of shortage. To further address procedures, the By-laws Ad Hoc Subcommittee (BAHSC) was created; by laws were adopted by the NPDC in the fall of 2003. Other subcommittees created included the Control Crest Subcommittee (CCSC), Groundwater Wells Subcommittee (GWSC), Consumptive Use Subcommittee (CUSC), Official Files Subcommittee (OFSC), Finance Subcommittee (FSC) and Replacement Water Subcommittees (RWSC).

## Report of the

### Natural Flow and Ownership Accounting

At each spring meeting, the NPDC adopts the Natural Flow and Ownership Accounting Procedures (NFO), Exhibit 2 of the NPDC Charter. These procedures govern how water is allocated among the irrigation districts and each state on a daily basis. In July of 2003, the NPDC held a special meeting to address issues with the NFO that became evident due to the fact that the year was declared an allocation year under the new definitions set out in the Final Settlement Stipulation and Modified Decree. An allocation year is declared when the expected supply for the North Platte projects is less than 1,100,000 acre-feet. Changes in the procedures to account for the declaration of an allocation were approved by the NPDC.

#### Control Crest Subcommittee

The duties of the CCSC include: monitoring the performance of the stream gages that have control crest structures, assuring accurate measurements, and performing other duties as assigned. Each spring, this committee meets and discusses the performance of the stream gages and presents a report to the NPDC. An issue that continues to be of concern to Nebraska is the measurement of stream flow at the state line gage. Tom Hayden, supervisor of the Bridgeport field office, frequently takes measurements at this gage. In the spring of 2006, the NPDC members agreed that if Mr. Hayden judiciously makes additional stream flow measurements at the stateline gage, the measurements will be accepted by Reclamation; however, the expectation is that a measurement will not be taken every day unless absolutely necessary. If this becomes a concern to the NPDC members, the CCSC will be asked to meet again to resolve the outstanding issues.

Another duty has been that of reviewing the trigger day analysis performed by Reclamation as described in Exhibit 10.B of the NPDC Charter. During the fall 2004 NPDC meeting, the NPDC agreed to change the trigger day analysis and decided that the corrected trigger day analysis would need to be performed for the previous years, 2002, 2003 and 2004. In the fall of 2006, the NPDC accepted the 2002-2005 trigger day numbers as presented in Appendix B of the CCSC report.

#### Groundwater Wells Subcommittee

The GWSC is assigned the task of defining an acceptable process for reviewing well permits and evaluating hydrological connections as well as reviewing baseline wells and other duties as assigned. The document, "The Review of Wells in Areas Defined by Exhibits 4 and 12 Concerning Hydrologically Connected Wells," was adopted by the NPDC in the fall of 2002. The GWSC reported on their first analysis done according to the procedures previously developed by the subcommittee to determine whether or not a groundwater well would be considered hydrologically connected to the North Platte River or its tributaries. The subcommittee determined that the proposed well was not hydrologically connected under the definition in the Final Settlement Stipulation and Modified Decree. To further refine the review of hydrologically connected wells, the NPDC directed the subcommittee to develop maps delineating areas where wells would be presumed to not be hydrologically connected to the rivers under the definition of the Final Settlement Stipulation and Modified Decree. The subcommittee developed maps for the area above Guernsey Reservoir where appropriate based upon the geology. All maps were approved by the NPDC. Additionally, the subcommittee

## Department of Natural Resources

reviewed Exhibit B to Exhibit 4 of the NPDC Charter and recommended revisions to the list to remove wells that were determined to not be hydrologically connected to the stream.

The baseline well list was developed after various field investigations and detailed review by the subcommittee. As new information has come to light, the baseline well list has been revised. These additions to the baseline wells list were approved with the understanding that the total number of wells on the list shall not exceed the number of wells cited in Exhibit 10 of the NPDC Charter, 335 wells.

### Consumptive Use Subcommittee

The CUSC is tasked with scoping the work tasks and coordinating future consumptive use studies and other duties as assigned. One area of study and data collection that has a large impact on the calculation of the consumptive use of irrigated crops is weather data. In 2002, the NPDC agreed that the existing climate center weather station in Torrington would be used to fulfill the requirement in Exhibit 10, Article D.4 of the NPDC Charter and that there was a need to explore the possibility of relocating the Torrington weather station. In the fall of 2003, NPDC authorized the CUSC to initiate discussion with the High Plains Regional Climate Center (HPRCC) for the installation and operation of two weather stations for a not to exceed cost of \$20,000. In the spring of 2005, the subcommittee presented estimated costs of up to \$54,500 for the installation and operation of three weather stations over five years of operation. This estimated cost was revised to \$83,824 at the fall 2006 NPDC meeting. Additionally, the CUSC was tasked with determining the cooperator status of the Torrington weather station, and if the weather station was without a cooperator, the subcommittee would be authorized to spend up to \$1,770 to have the NPDC enter into a contract and become a cooperator for one year. Subsequently, the subcommittee and HPRCC could seek a better location for the weather station. Three weather stations above Guernsey Reservoir were installed in 2007 and the NPDC entered into an agreement with HPRCC as a cooperator on the Torrington weather station.

Another area of study relevant to the calculation of consumptive use concerns irrigation practices, which include things like crop type, density of crop, fertilizer use, crop management and water management. At the spring 2005 meeting, the NPDC approved an estimated cost of up to \$8,126 for work on the consumptive use questionnaire. During a special NPDC meeting on January 9, 2006, the CUSC presented final documents on the survey of irrigation practices, the associated correspondence and supporting documents. These documents were approved with the understanding that Mr. Tyrrell would sign all the correspondence as the Wyoming representative to the NPDC and as the Wyoming State Engineer. The questionnaire was mailed in 2006 and had a response rate of nearly 70 percent. Preliminary analysis of the data has been performed by the subcommittee to help in determining how to proceed with other tasks necessary for the estimation of consumptive use.

The final area of study on which the subcommittee is working is the water balance study sites. In 2004, the subcommittee and the NPDC members held a special workshop to discuss this matter. It was determined that the water balance study needed to be retooled to a field study of evapotranspiration. The subcommittee continues to work on this task.

## **Report of the**

### **Official Files Ad Hoc Subcommittee**

The OFSC was tasked with developing the protocol for the NPDC filing system that addresses all information to be retained in the NPDC files, both paper files and electronic data. The NPDC also assigned the task of identifying all potential data referenced in the Final Settlement Stipulation to the OFSC. The NPDC decided that documents generated by Reclamation concerning the determination of the forecasted supply and the notification as to whether or not the current water year is likely to be an allocation year would be included in the NPDC repository. The NPDC also agreed that the repository is open to public access. In the fall of 2003, the NPDC adopted the protocol for the repository of documents with the understanding that further additions to the document needed to be completed.

### **Finance Standing Subcommittee**

Also in 2003, the FSC was created and tasked with investigating how the NPDC would address future expenditures and financial organization. A special meeting was held January 9, 2006, to discuss budget and disbursement procedures. The "Budget and Disbursement Procedures," as presented by the FSC, were approved as a stand-alone document with a date of January 9, 2006.

Initially, the FSC recommended and the NPDC approved the selection of the Wyoming Community Foundation as the entity to handle the NPDC's finances. However, when the Wyoming Community Foundation was presented with the final contract, the board decided to not enter into the agreement. The FSC reported that after the Wyoming Community Foundation declined to enter into an agreement, the subcommittee approached the Nebraska Community Foundation to enter into a memorandum of agreement for handling the finances of the NPDC. The NPDC agreed to the memorandum with the Nebraska Community Foundation.

### **Replacement Water Subcommittee**

The RWSC was created in the fall of 2006 to look at Exhibit 10, paragraph D.2 to the NPDC Charter (collecting information on the basic parameters used to estimate the replacement water requirements).

Department of Natural Resources

WATER SUPPLY

Platte River, White River, Upper Niobrara River & Hat Creek Basins

2005

The 2005 water year runoff was better than the last five years. Precipitation in the upper system of the North Platte River Basin varied widely from month to month. In 2005, there was below average mountain snowpack and above average temperatures.

The North Platte Project ownership ended at 402,055 acre-feet compared to 75,242 acre-feet in 2004. The April through July runoff from the North Platte drainage ended at 771,600 acre-feet or 96 percent of the 30-year average. Seminole Reservoir inflow was the 48<sup>th</sup> lowest for period of record (1906-2005.) Total precipitation received in 2005 in the North and South Platte Basins was normal to below average.

Districts held off diverting until mid- to late-June. Even by using such a late start date, the average district had only 55 to 65 days of water supply. Diversions continued until September 10, 2005.

The U.S. Bureau of Reclamation declared an allocation year on June 29, 2005 for the North Platte Project.

Rainfall from the Wyoming/Nebraska State Line to Lewellen helped the irrigators. For the months of April, June, July, August and October, the precipitation averaged 100 to 350 percent of normal. This precipitation helped by holding down the closings of appropriations below the state line.

Lake McConaughy declined to 443,042 acre-feet, which is 35 percent of a 45-year average. Maximum storage reached 658,000 acre-feet, or 41 percent of the 45-year average. With the declining inflow to the reservoir, The Central Nebraska Public Power and Irrigation District has had to alter their storage releases.

Water supply for the White River Basin was not sufficient to meet the requirements of all the appropriators. They have been working together, the best they can, to utilize the limited amount available. Regulation in the White River Basin was not required in 2005. Whitney Reservoir had a maximum storage content of 10,880 acre-feet.

Likewise in the Hat Creek and Upper Niobrara River Basins, water shortages occurred. The maximum storage in the Box Butte Reservoir was 15,169 acre-feet. Precipitation was normal. No requests for administration were received in the Lodgepole Creek Basin, even though the supply was insufficient to meet the requirements of all appropriators.

## Report of the

2006

This year continues to show the cumulative effects of the past seven years of drought. Below average mountain snowpack, above normal temperatures, deficient spring and summer precipitation characterized the 2006 water supply in the North Platte River Basin. The 2006 water year runoff was lower than 2005. The April through July runoff from the North Platte drainage ended at 591,600 acre-feet, or 60 percent of the 30-year average of 978,800 acre-feet. Seminoe Reservoir inflow was the 27<sup>th</sup> lowest, 751,700 acre-feet, for the period of record (1905-2006).

The continuation of the drought in the North Platte River Basin produced reduced runoff and no ownerships were filled for the North Platte Project appropriators. Mitchell Irrigation District started the irrigation season with only 3,400 acre-feet of storage water available in their account. On August 15, that district depleted their account. On August 16, Farmers Irrigation District agreed to forego 100 cubic feet per second (cfs) of their natural flow appropriation so that Mitchell could divert the 100 cfs. This year ownership in the North Platte Project ended at 328,600 acre-feet. The U.S. Bureau of Reclamation declared an allocation because of the low ownership accounts and the low forecasted runoff. This marked the fifth consecutive allocation year.

Irrigation districts held off the start of diversions until mid to late June. Even with starting late, most districts had only a 65- to 80-day water supply. Precipitation helped extend their season to September 7, 2006.

Lake McConaughy declined to 364,200 acre-feet, which is only 29 percent of a 47-year average. Maximum storage in Lake McConaughy was 733,500 acre-feet which is 47 percent of the 47-year average. The Central Nebraska Public Power and Irrigation District was able to provide eight inches of water to their customer's which was an increase over the 2005 irrigation season.

The South Platte River was basically dry for most of the irrigation season with flows averaging 18 to 50 cfs.

The Hat Creek Basin did receive more precipitation throughout the basin than in the past several years. Even with the increase in precipitation, the basin still continues to be a water short basin because of all the appropriations and riparian uses. Water shortages occurred in the Hat Creek Basin.

Water supply for the White River Basin was not sufficient to meet the requirements of all the appropriators. Whitney Reservoir had a maximum storage of 10,700 acre-feet.

In the Upper Niobrara River Basin the maximum storage in the Box Butte Reservoir was 14,988 acre-feet.

The water supply for Lodgepole Creek was not sufficient to meet the requirements of all appropriations. However, there were no requests for administration.

## Department of Natural Resources

### Republican River Basin

#### 2005

Precipitation at the five U.S. Bureau of Reclamation project reservoirs located in Nebraska ranged from 98% of normal at Harlan County Reservoir to 113% of normal at Hugh Butler Reservoir. However, inflows continue to decline. Enders and Hugh Butler Lake Reservoirs recorded the lowest annual inflow on record. Swanson recorded the third lowest inflow on record and Harry Strunk recorded the fifth lowest inflow on record. The 2005 inflow for Harlan County Reservoir was slightly over 53,600 acre-feet with the majority of the inflow occurring during the first six months of the year. Due to the extremely low water supply, no releases were made from Harlan County Reservoir. This is the second time since the 1950s that no deliveries were made for irrigation.

A total of 29,000 acre-feet of water was diverted at Guide Rock into Courtland canal during the non-irrigation season and stored in Lovewell Reservoir which is located in Kansas. This water accounted for approximately 66 percent of the total storage supply in Lovewell Reservoir.

Due to the limited storage water supply, no irrigation releases were made from Swanson, Enders, Hugh Butler or Harlan County reservoirs. Storage water was released from Harry Strunk Reservoir for Cambridge Canal. Culbertson and Superior canals diverted a limited amount of natural flow.

Irrigation wells located in the Upper Republican Natural Resources District were allocated 13.5 acre-inches per certified acre. An allocation of 13 acre-inches per certified acre was granted by the Middle Republican Natural Resources District, and 12 acre-inches per certified acre was granted in the Lower Republican Natural Resources District west of State Highway 183 and 11 acre-inches per certified acre east of state Highway 183. That portion of Tri-Basin Natural Resources District that is within the water shed of the Republican River Basin had unlimited allocations for irrigation wells.

#### 2006

Precipitation at four of the five U.S. Bureau of Reclamation project reservoirs located in Nebraska was above normal and ranged from 100 percent at Hugh Butler Lake Reservoir to 111 percent at Harry Strunk Reservoir. Harlan County Reservoir recorded precipitation was below normal at 91 percent of average.

Despite the near normal precipitation, Swanson, Enders, Hugh Butler and Harry Strunk reservoirs recorded the lowest annual inflows on record. Harlan County reservoir recorded the second lowest annual inflow on record.

Limited storage releases were made from Hugh Butler Lake Reservoir for Bartley Canal, Harry Strunk Reservoir for Cambridge Canal and Harlan County Reservoir for Kansas Bostwick Irrigation District.

## Report of the

A total of 19,000 acre-feet was diverted into Courtland canal in the non-irrigation season and stored in Kansas' Lovewell Reservoir. This water accounted for approximately 63 percent of the total storage supply in Lovewell Reservoir.

Water supplies were insufficient for Meeker-Driftwood, Red Willow and Culbertson Extension canals. This is the fourth consecutive year that no diversions were made by these canals.

In an effort to reduce irrigated acres and reduce Nebraska's consumptive use, Frenchman Valley Irrigation District, Nebraska Bostwick Irrigation District and Riverside Irrigation Company signed a Memorandum of Agreement (MOA) with Nebraska Department of Natural Resources to forgo irrigation in 2006.

Irrigation wells located in the Upper Republican Natural Resources District were allocated 13.5 acre-inches per certified acre. The Middle Republican Natural Resources District allocated 13 acre-inches per certified acre, and 12 acre-inches per certified acre was allocated in the Lower Republican Natural Resources District west of State Highway 183 and 11 acre-inches per certified acre east of State Highway 183. The Tri-Basin Natural Resources District that is within the watershed of the Republican River Basin did not have any limits on the amount of water pumped by irrigation wells.

### Loup River Basin

#### 2005

In 2005, rainfall amounts were above normal in both the Lower Niobrara and Loup Basins. Rainfall for Valentine was 128 percent above normal, providing normal flows during the irrigation season. In the Loup Basin, Valley County rainfall was 143 percent above normal, again providing adequate flows during the irrigation season. The four major reservoirs; Merritt, Calamus, Sherman, and Davis Creek were filled and supplied a full allotment of water to project lands.

#### 2006

If water supply for the summer of 2006 for the Ord Field Office was a newspaper headline, it might read, "The Drought Continues." In the first nine months of 2006, only three months have reached above average (March, April, and September). May was the driest in 118 years of record, receiving only 0.20 inches. May's average is 3.46 inches. In the critical months of May through August, only 53 percent of normal rainfall fell.

Of the four major reservoirs, only three filled. They were Calamus, Merritt, and Sherman. Davis Creek Reservoir did not fill, reaching approximately 88 percent of capacity. Nevertheless, all the reservoirs supplied a full allotment of water to project lands. All the major rivers provided adequate water supply during the irrigation season.

The lower Niobrara Basin in 2006 was much drier, at least in the Valentine area, receiving only 72 percent of normal precipitation. Merritt Reservoir did fill and supplied a full allotment of water to project lands. Despite less rain in parts of the basin, at the Niobrara River

## Department of Natural Resources

near Verdel stream gaging station, records indicate the annual daily mean was 9 percent more in the 2006 water year than in the 2005 water year. As for the Loup Basin, precipitation was also less in 2006, although closer to normal at least in Valley County, reaching 101 percent of normal. The month of May in many counties was the driest on record, some records going back over 100 years. Of the three major reservoirs, only two filled. They were the Calamus and Sherman reservoirs. Davis Creek reservoir did not fill, reaching approximately 88 percent of capacity. Nevertheless all three reservoirs supplied a full allotment of water to project lands. All the major rivers in both basins provided an adequate water supply during the irrigation season.

### Nemaha Rivers, Blue Rivers, and Salt Creek Basins

#### 2005

In 2005 water supplies were short at times in all the basins. We administered for water for localized shortages on Oak Creek, Weeping Water Creek, and on the North Fork of the Big Blue River above Lincoln Creek. Flows in the Nemaha basin were very low, but no shortages were reported. The Lower Platte River fluctuated around the target flows for Nebraska Game and Parks Commission Instream Flow Permit and was administered accordingly. Both the Little and Big Blue rivers required administration for the state-line flows set out in Nebraska's compact with Kansas.

#### 2006

During 2006 water supplies grew shorter. The entire Big Blue River Basin was under intermittent administration from the beginning of July through August 7 while the Little Blue River basin was under varying degrees of pumping restrictions from the beginning of July through August 17 to comply with terms of the Blue River Compact with Kansas. We administered for the Nebraska Game and Parks Commission's instream flow permits on the Lower Platte River from the middle of May through the later part of November. We also administered for localized shortages on Oak Creek and on the North Fork of the Big Blue River above Lincoln Creek. Flows in the Nemaha River Basin were near historic lows; however, no calls on the river were made.

### Elkhorn River and Missouri River Tributaries Basins

#### 2005

During the 2005 calendar year, the water supply of the Elkhorn River was above average. This reversed a three-year trend (2002, 2003 and 2004 where the river supply was below historical annual average. The river supply in 2005 was 1,079,076 acre feet at the Waterloo gage. This 2005 river supply is 110 percent of the historical average yearly yield for the period of 1929-2004. Due to heavy runoff in June 2005, summer flows for 2005 (June, July and August) were also quite robust at 119 percent of the historical record.

## Report of the

### 2006

In calendar year 2006, the Elkhorn River supply diminished considerably due to droughty hot summer weather that gripped northeast Nebraska. The Elkhorn River basin water supply was untypically below average. The 2006 river supply was 678,132 acre feet at the Waterloo gage. This is about 69 percent of the historical average yearly yield (1929-2005). Summer flows for 2006 were also dramatically lower at Waterloo at 32 percent of historical record reflecting the hot, dry weather. 2006 summer flows were similar to the mid-1950's, but not as low as 1976 or 1936.

Trends in flow and water supply for the Missouri River Tributaries are largely unknown because there is only one gage (Omaha Creek at Homer) which quantifies flow amounts over the long term. There are many stage recording gages on the Big Papillion Creek system, but flow quantities are not established.

Department of Natural Resources

**WATER ADMINISTRATION**

Loup River Basin

Water administration for the summer of 2005 for the Ord Field Office was very close to normal. The four major reservoirs (Calamus, Davis Creek, Merritt, and Sherman) were filled and a full allotment of water was supplied to project lands. All the major rivers provided adequate water supply during the irrigation season.

On July 12, 2005, closing orders were mailed to 73 junior natural flow permits and 18 junior storage permits in the Loup Basin for the benefit of A-17330 or A-17331 (Game and Parks Commission's Platte River instream flow appropriations.) Also on this same date, 1,008 permits were regulated.

On July 20, 2005, a closing notice was handed out to an illegal pump diversion on Victoria Creek near Gates, NE.

On August 29, 2005, opening notices were mailed to the 73 junior direct flow permits and the 18 junior storage permits in the Loup Basin, because water levels in the Platte River were high enough to meet A-17330 or A-17331. This however was short lived. Closing orders were again mailed out on September 2, 2005. These permits remained closed until the end of the irrigation season.

On May 15, 2006, closing orders were mailed to 73 junior natural flow permits and 18 junior storage permits in the Loup Basin for the benefit of A-17330 and A-17331, Nebraska Game and Parks Commission's instream flow permits. On June 2, 845 permits were sent regulating notices in the Loup Basin.

On June 20, 2006, opening notices were mailed to all of the permits that were closed the instream flow appropriations were being met. This condition did not last long as closing orders were again mailed out on June 26, 2006.

On June 27, 2006, at the request of downstream water users, an investigation was made on a possible illegal pump diversion on Victoria Creek near Gates, NE. It was discovered that a large pit (open well) had been dug some distance from Victoria Creek. This was turned over to the Lower Loup NRD office because of the moratorium placed on ground water wells in the Loup Basin on March 1, 2006.

On August 10, 2006, opening notices were mailed to the 91 permits that were closed. This again was short lived. Closing orders were mailed out on August 14<sup>th</sup>, 2006. The permits were opened on September 11, 2006.

**Report of the**

Niobrara River Basin

On September 9, 2005, the Ord Field Office investigated a livestock water complaint on Soldier Creek in Knox County. At this time, ample water was found to be in the creek and no further action was taken.

SPEAR T RANCH, INC., appellant,  
v.  
Melvin G. KNAUB et al., appellees.  
NEBRASKA SUPREME COURT CASE No. S-03-789.

Jan. 21, 2005.

1. **Motions to Dismiss: Appeal and Error.** A district court's grant of a motion to dismiss is reviewed de novo.
2. **Pleadings: Proof.** Complaints should be liberally construed in the plaintiff's favor and should not be dismissed for failure to state a claim unless it appears beyond doubt that the plaintiff cannot prove any set of facts in support of the claim that would entitle him or her to relief.
3. **Pleadings.** A complaint should not be dismissed merely because it does not state with precision all elements that give rise to a legal basis for recovery.
4. **Rules of the Supreme Court: Pleadings.** Dismissal under Neb. Ct. R. of Pldg. in Civ. Actions 12(b)(6) (rev.2003) should be granted only in the unusual case in which a plaintiff includes allegations that show on the face of the complaint that there is some insuperable bar to relief.
5. **Waters: Words and Phrases.** Ground water is defined as that water which occurs or moves, seeps, filters, or percolates through the ground under the surface of the land.
6. **Waters: Statutes.** Statutory surface water appropriation rules do not apply to conflicts between surface and ground water users.
7. **Torts: Conversion: Property: Words and Phrases.** Tortious conversion is any distinct act of dominion wrongfully asserted over another's property in denial of or inconsistent with that person's rights.
8. **Waters: Property.** A right to appropriate surface water is not an ownership of property.
9. **Waters: Property: Conversion: Trespass.** Because a surface water user does not have a property interest in its surface water appropriation and only has a right to use, it cannot state a claim for conversion or trespass.
10. **Waters.** Under the English rule of water law, also referred to as the absolute ownership rule, a landowner had absolute ownership of the waters under his or her land and could withdraw any quantity of water for any purpose without liability, even though the result was to drain water from beneath surrounding lands.
11. **Waters.** Under what is termed the "American rule" of water law, the owner of the land is entitled to appropriate subterranean or other waters accumulating on the land, but cannot extract and appropriate them in excess of a reasonable and beneficial use of land, especially if the exercise of such use is injurious to others.
12. **Waters: Words and Phrases.** Under the American rule of water law, the term "reasonable use" relates to the manner in which water is used upon the appropriator's land. The adjacent landowners' interests are in issue only when the appropriator uses water in excess of the reasonable and beneficial use of it upon his or her land and that excess use is injurious to the adjacent landowner.

## Report of the

13. **Waters.** The correlative rights rule of water law provides that the rights of all landowners over a common aquifer are coequal or correlative and that one cannot extract more than his or her share of the water even for use on his or her own land if others' rights are injured by the withdrawal.
14. **Waters.** The Restatement (Second) of Torts §§ 858 and 850A (1979) are adopted to govern conflicts between users of hydrologically connected surface water and ground water.
15. **Waters: Liability.** A proprietor of land or his or her grantee who withdraws ground water from the land and uses it for a beneficial purpose is not subject to liability for interference with the use of water of another, unless the withdrawal of the ground water has a direct and substantial effect upon a watercourse or lake and unreasonably causes harm to a person entitled to the use of its water.
16. **Waters: Courts.** Whether a ground water user has unreasonably caused harm to a surface water user is decided on a case-by-case basis. In making a reasonableness determination, Restatement (Second) of Torts § 850A (1979) provides a valuable guide, but the test is flexible, and a trial court should consider any factors it deems relevant.
17. **Pleadings.** Leave to amend should be granted liberally when justice so requires.
18. **Legislature.** The Legislature is free to create and abolish rights as long as no vested right is disturbed.
19. **Statutes.** Statutes which change or take away a common-law right must be strictly construed.
20. **Statutes.** Any statutory construction restricting or abolishing common-law rights should not be adopted, unless the plain words of the statute compel such result.
21. **Waters: Statutes.** The Nebraska Ground Water Management and Protection Act does not show either an express or implied abrogation of the common law.
22. **Administrative Law: Jurisdiction: Claims.** The primary jurisdiction doctrine applies whenever enforcement of a claim, originally cognizable in the courts, requires the resolution of issues that have been placed within the special competence of an administrative body in accordance with the purposes of a regulatory scheme.
23. **Administrative Law: Jurisdiction.** Under the primary jurisdiction doctrine, whether the purposes of an administrative act require that the administrative agency should first pass on a question depends on whether the question raises policy issues that should be considered by the administrative agency in the interests of uniformity and administrative expertise.
24. **Administrative Law: Jurisdiction.** Application of the primary jurisdiction doctrine does not excuse the court from deciding the issue. Instead, it delays the process pending referral of the issues to the administrative body for its views.
25. **Administrative Law: Jurisdiction.** Under the primary jurisdiction doctrine, the controverted question and the inquiry necessary for its solution are the determining factors.
26. **Administrative Law: Jurisdiction.** The primary jurisdiction doctrine does not apply when a pure question of law is at issue.
27. **Administrative Law: Jurisdiction: Damages: Nuisances: Torts.** Exercise of the primary jurisdiction doctrine is inappropriate in actions seeking damages for nuisance or other common-law tort actions.
28. **Parties: Jurisdiction: Waiver.** The presence of necessary parties to a suit is a jurisdictional matter and cannot be waived by the parties; it is the duty of the plaintiff to join all persons who have or claim any interest which could be affected by the judgment.

Department of Natural Resources

29. **Parties: Words and Phrases.** An indispensable or necessary party to a suit is one who has an interest in the controversy to an extent that such party's absence from the proceedings prevents a court from making a final determination concerning the controversy without affecting such party's interest.
30. **Parties: Pleadings: Tort-feasors: Damages.** A plaintiff need not join all tort-feasors as defendants in an action for damages.
31. **Parties: Tort-feasors: Damages: Liability.** Every joint tort-feasor is liable for all damages to which his or her conduct has contributed, and it is no defense that these damages would not have occurred without the concurring misconduct of another person.

## Report of the

HENDRY, C.J., WRIGHT, CONNOLLY, GERRARD, STEPHAN, McCORMACK, and  
MILLER-LERMAN, JJ.  
CONNOLLY, J.

This appeal presents the question whether a surface water appropriator has a claim against a ground water user for interference with a surface water users' appropriation.

Spear T Ranch, Inc. (Spear T), a surface water appropriator, appeals a district court order dismissing with prejudice its complaint seeking an injunction and damages for the loss of surface water from Pumpkin Creek. The appellees are ground water irrigators in the Pumpkin Creek basin.

On appeal, Spear T argues that it has stated a claim for conversion, injunction, or trespass. The appellees, however, argue that any common-law claims are abrogated by the Nebraska Ground Water Management and Protection Act (GWMPA), Neb.Rev.Stat. §§ 46-656.01 through 46-656.67 (Reissue 1998 & Cum.Supp.2002) (now found at Neb.Rev.Stat. §§ 46-701 through 46-753 (Reissue 2004)). In the alternative, they argue that the issues should be determined by the North Platte Natural Resources District under the doctrine of primary jurisdiction.

### I. BACKGROUND

Spear T filed a complaint alleging that it has surface water appropriations on Pumpkin Creek, which runs through Banner and Morrill Counties. The appellees own real property in the Pumpkin Creek basin and have irrigation wells within the boundaries of the basin. The complaint alleged that the ground water irrigation wells are hydrologically connected to Pumpkin Creek. According to Spear T, the appellees' pumping of ground water over the four years preceding the complaint drained water from Pumpkin Creek and deprived Spear T of its surface water appropriations; the complaint alleged that the appellees have continued to pump ground water and that Spear T has been unable to irrigate crops and provide water for livestock. Spear T alleged that the appellees converted its surface water rights to their own use without compensating Spear T and that it would be irreparably harmed if the appellees continued to use their ground water irrigation wells. The complaint sought compensation for the value of the surface water appropriations taken by the appellees or, in the alternative, special damages for the value of the water rights and other damages; it also sought an injunction.

The appellees moved under Neb. Ct. R. of Pldg. in Civ. Actions 12(b) (rev.2003) to dismiss, alleging that (1) the court lacked subject-matter jurisdiction, (2) the complaint failed to state a claim upon which relief could be granted, and (3) the complaint failed to join necessary parties. Without giving its reasoning, the court dismissed the complaint with prejudice on all three grounds. Spear T appealed.

We initially heard oral arguments in March 2004. After arguments, the appellees moved for additional briefing and reargument to address the primary jurisdiction issue. Also after arguments, 2004 Neb. Laws, L.B. 962, was passed, which changed provisions of the GWMPA. We granted the motion and ordered additional briefing and argument on the following issues: (1) primary jurisdiction; (2) primary jurisdiction because of L.B. 962; (3) the effect of L.B. 962,

## Department of Natural Resources

if any, on the appeal; and (4) whether the GWMPA or L.B. 962 has abrogated any common-law remedies that Spear T might have.

### II. ASSIGNMENTS OF ERROR

Spear T assigns that the district court erred when it dismissed its complaint for lack of subject-matter jurisdiction, failure to state a claim, and failure to join necessary parties.

### III. STANDARD OF REVIEW

This action involves a rule 12 motion to dismiss for failure to state a claim and a rule 12 motion to dismiss for failure to join indispensable parties. In 2003, the Nebraska rules of pleading were changed to reflect the federal rules. Thus, we apply the new rules for notice pleading. See Neb. Ct. R. of Pldg. in Civ. Actions 1 (rev.2004).

A district court's grant of a motion to dismiss is reviewed de novo. *Weeder v. Central Community College*, 269 Neb. 114, 691 N.W.2d 508 (2005). Complaints should be liberally construed in the plaintiff's favor and should not be dismissed for failure to state a claim unless it appears beyond doubt that the plaintiff cannot prove any set of facts in support of the claim that would entitle him or her to relief. *Kellogg v. Nebraska Dept. of Corr. Servs.*, 269 Neb. 40, 690 N.W.2d 574 (2005).

The federal courts have made it clear that a complaint should not be dismissed merely because it does not state with precision all elements that give rise to a legal basis for recovery. *Schmedding v. Tnemec Co., Inc.*, 187 F.3d 862 (8th Cir.1999). As a practical matter, dismissal under rule 12(b)(6) should be granted only in the unusual case in which a plaintiff includes allegations that show on the face of the complaint that there is some insuperable bar to relief. See *id.*

### IV. ANALYSIS

The term "surface water" encompasses all waters found on the earth's surface. Richard S. Harnsberger & Norman W. Thorson, *Nebraska Water Law & Administration* § 1.04 at 9-10 (Butterworth Legal Publishers 1984). Here, the surface water is the stream on which Spear T has water appropriations. In contrast, ground water is defined as "that water which occurs or moves, seeps, filters, or percolates through the ground under the surface of the land." *Id.* at 12. Accord Neb.Rev.Stat. § 46-635 (Reissue 2004).

Hydrologically, ground water and surface water are inextricably related. Ground water pumping can cause diminished streamflows. Streamflow can support the potential for subirrigation. Seepage from surface water supplies canals, and deep percolation of applied irrigation water from surface projects can recharge ground water aquifers. Harnsberger & Thorson, *supra*, § 5.30. Water law commentators have colorfully described this phenomenon: "[A]ll water is interrelated and interdependent. If groundwater were red, most streams would be various shades of pink; if groundwater were poisoned, the streams would also be poisoned." Richard S. Harnsberger et al., *Groundwater: From Windmills to Comprehensive Public Management*, 52 Neb. L.Rev. 179, 183 (1973).

## Report of the

But Nebraska water law ignores the hydrological fact that ground water and surface water are inextricably linked. Instead of an integrated system, we have two separate systems, one allocating streamflows and the other allocating ground water. Under constitutional and statutory provisions, streamflows are allocated by priority in time. See Neb. Const. art. XV, § 6. Ground water, in contrast, is governed by a common-law rule of reasonableness and the GWMPA. Moreover, the lack of an integrated system is reinforced by the fact that different agencies regulate ground water and surface water. The Department of Natural Resources regulates surface water appropriations. See Neb.Rev.Stat. § 61-201 et seq. (Reissue 2003 & Cum.Supp.2004). In contrast, under the GWMPA, ground water is statutorily regulated by each Natural Resources District (NRD).

The tension between the two systems has long been recognized by commentators. See Harnsberger et al., *supra* at 182 (“[g]round and stream diverters in Nebraska are on a collision course which may occur sooner than most people think”). That day has arrived.

### 1. Does Spear T Have Common-Law Claim Against Appellees?

We begin by determining whether Spear T has stated a claim. Spear T argues that it has stated a claim based either on the statutory rule of prior appropriation of surface water or on the tort of conversion; we reject these arguments. But as we explain below, we determine that the common law does recognize a tort claim by a surface water appropriator against a ground water user and that Spear T's complaint could be amended to state a claim.

#### (a) Prior Appropriation

As noted, under constitutional and statutory provisions, streamflows are allocated by priority in time. In its first attempt to state a claim, Spear T relies on prior appropriation. Spear T argues that because the water is hydrologically connected and because it has a prior surface water appropriation, it has priority to the water. According to Spear T, the water is all one “stream” and, as such, Spear T's prior appropriation takes priority over other users of the water, including those who withdraw the water from under its lands. Thus, Spear T essentially asks this court to apply legislatively created surface water priorities to ground water use without considering existing common-law rules. We decline to adopt this approach for several reasons.

First, an application of surface water priorities to ground water requires this court to agree with a legal fiction that considers the ground water to be an “underground stream.” We take as true that the water is hydrologically connected, but water rarely runs in a true underground stream. See Richard S. Harnsberger & Norman W. Thorson, *Nebraska Water Law & Administration* § 1.07 at 13-14 (Butterworth Legal Publishers 1984). Adherence to such a view ignores reality.

Second, no statutory or case law authority supports applying surface water appropriations to ground water. We recognize that most legislatures in western states have developed comprehensive appropriation systems overseen by administrative agencies. See *Restatement (Second) of Torts*, ch. 41, topic 4 (1979). But in Nebraska, the Legislature has not developed an appropriation system that addresses direct conflicts between users of surface and ground water that is hydrologically connected.

## Department of Natural Resources

Finally, the prior appropriation rule that Spear T advocates would give first-in-time surface water appropriators the right to use whatever water they want to the exclusion of later-in-time ground water users. This could have the effect of shutting down all wells in any area where surface water appropriations are hydrologically connected to ground water. Richard S. Harnsberger et al., *Groundwater: From Windmills to Comprehensive Public Management*, 52 Neb. L.Rev. 179, 248 (1973) (“[i]f the doctrine of prior appropriation [was] carried to [its] logical conclusion, all Nebraska wells would be shut down”). This would unreasonably deprive many ground water users. Accordingly, we decline to apply the statutory surface water appropriation rules to conflicts between surface and ground water users.

### (b) Conversion

Next, Spear T contends that it has stated a claim for conversion. Tortious conversion is any distinct act of dominion wrongfully asserted over another's property in denial of or inconsistent with that person's rights. *Baye v. Airlite Plastics Co.*, 260 Neb. 385, 618 N.W.2d 145 (2000).

A right to appropriate surface water however, is not an ownership of property. Instead, the water is viewed as a public want and the appropriation is a right to use the water. As one article has stated in reference to ground water: “Trespass is unavailable in a typical well interference case because a physical invasion of the plaintiff's property is lacking. Similarly, an action in conversion is unavailable, since the plaintiff has no private property interest in groundwater, at least not prior to capture.” Harnsberger & Thorson, *supra*, § 5.27 at 266-67, citing *State ex rel. Douglas v. Sporhase*, 208 Neb. 703, 305 N.W.2d 614 (1981), reversed on other grounds 458 U.S. 941, 102 S.Ct. 3456, 73 L.Ed.2d 1254 (1982). Because Spear T does not have a property interest in its surface water appropriation and only has a right to use, it cannot state a claim for conversion or trespass.

### (c) Has Spear T Stated Claim Under Other Common-Law Doctrines or, Alternatively, Should It Be Given Leave to Amend?

Although Spear T cannot state a claim under the statutory surface water appropriation rules or for the tort of conversion, this does not end our analysis. The question remains whether it has stated a claim under other common-law principles or if it should be allowed leave to amend to state such a claim.

#### (i) Review of Common-Law Rules

We begin by reviewing common-law rules that courts have employed to adjudicate disputes between water users.

##### a. English Rule

Under the English rule of water law-also referred to as the absolute ownership rule-a landowner had absolute ownership of the waters under his or her land. Therefore, the owner could withdraw any quantity of water for any purpose without liability, even though the result was

## Report of the

to drain water from beneath surrounding lands. *Prather v. Eisenmann*, 200 Neb. 1, 261 N.W.2d 766 (1978). See, also, *Cline v. American Aggregates*, 15 Ohio St.3d 384, 474 N.E.2d 324 (1984).

The English rule was predicated on protection for the property rights of landowners whose activities resulted in ground water diversion. See, *Cline v. American Aggregates*, *supra*; Restatement (Second) of Torts § 858 (1979) (describing English rule). The basis for the rule has also been described as a “feeling that the ways of underground water were too mysterious and unpredictable to allow the establishment of adequate and fair rules for regulation of competing rights to such water.” *State v. Michels Pipeline Construction, Inc.*, 63 Wis.2d 278, 290-91, 217 N.W.2d 339, 344 (1974). Thus, the English courts adopted the position that everyone was permitted to take and use all the ground water of which they could get possession. *Id.*

Most American courts, however, have criticized the English rule, recognizing that the rule protected landowners from liability even when water was diverted for malicious purposes. *Maerz v. U S Steel Corp.*, 116 Mich. App. 710, 323 N.W.2d 524 (1982), citing *Huber v. Merkel*, 117 Wis. 355, 94 N.W. 354 (1903). The rule has also been criticized because, although a landowner theoretically had a property right in waters beneath his or her land, the overlying owner with the deepest well or largest pump could control water that would otherwise be available to all. *Maerz v. U S Steel Corp.*, *supra*. See, also, *Cline v. American Aggregates*, *supra*; *Meeker v. East Orange*, 77 N.J.L. 623, 74 A. 379 (1909).

An extreme minority of jurisdictions still adhere to the English rule or a rule that has the same effect as the English rule. See, *Maddocks v. Giles*, 728 A.2d 150 (Me.1999); *Sipriano v. Great Spring Waters of America*, 1 S.W.3d 75 (Tex.1999). These jurisdictions refuse to apply to ground water the rules applicable to surface water and treat ground water as an entirely separate and unconnected resource that may be used at will by the owner of the overlying land. In each case, the court recognized problems with the reasoning behind the English rule, but in *Maddocks*, the court deferred to the Legislature, which was already taking some action. Likewise, in *Sipriano*, a constitutional amendment placed the regulation of water in the Legislature's hands.

### b. American Rule

Because of disagreement with the English rule, American courts have modified it in different ways. Under what is termed the “American rule” of water law, the owner of the land is entitled to appropriate subterranean or other waters accumulating on the land, but cannot extract and appropriate them in excess of a reasonable and beneficial use of land, especially if the exercise of such use is injurious to others. *Prather v. Eisenmann*, *supra*.

Under the American rule, the term “reasonable use” relates to the manner in which water is used upon the appropriator's land. The adjacent landowners' interests are in issue only when the appropriator uses water in excess of the reasonable and beneficial use of it upon his or her land and that excess use is injurious to the adjacent landowner. *Prather v. Eisenmann*, 200 Neb. 1, 261 N.W.2d 766 (1978). The American rule has at times also been referred to as a rule of

## Department of Natural Resources

“reasonable use,” although it does not consider a balancing of the parties' interests. Thus, one court has stated:

This [reasonable use] designation is unfortunate and in no small measure responsible for the confusion concerning the rule. If applied to this rule, the words reasonable use cannot be given their inherent broad meaning of a use reasonable under all the circumstances. Instead, the words must be given the contrived meaning of a use reasonably related to enjoyment of the land from which the waters are taken.

Maerz v. U S Steel Corp., 116 Mich. App. at 715 n. 2, 323 N.W.2d at 527 n. 2.

Under the American rule, a person who is deprived of surface water because of the use of ground water by a nearby landowner will recover only when the water was not used for a beneficial purpose on the ground water user's land.

### c. Correlative Rights

The correlative rights rule of water law originated in California and provides that the rights of all landowners over a common aquifer are coequal or correlative and that one cannot extract more than his or her share of the water even for use on his or her own land if other's rights are injured by the withdrawal. *Prather v. Eisenmann*, supra. The rule first arose in *Katz v. Walkinshaw*, 141 Cal. 116, 70 P. 663 (1902). Under the rule, the overlying landowners have no proprietary interest in the water under their ground and each owner over a common pool has a correlative right to make a beneficial use of the water on his or her land. Priority of use is irrelevant because in times of shortage, the common supply is apportioned among the landowners based on their reasonable needs. Richard S. Harnsberger et al., *Groundwater: From Windmills to Comprehensive Public Management*, 52 Neb. L.Rev. 179 (1973) (describing correlative rights rule).

The principal difficulty with the correlative rights rule is how to allocate the water, and courts have approached the question in different ways. See *id.* For example, some courts interpret the correlative rights rule as essentially the same as the Restatement view described below. See *Maddocks v. Giles*, 728 A.2d 150 (Me.1999). Others view the rule as providing apportionment in times only when there is an insufficient supply for all users. See *State v. Michels Pipeline Construction, Inc.*, 63 Wis.2d 278, 217 N.W.2d 339 (1974).

Some courts, however, have adopted a reasonable use rule that combines the American rule and correlative rights rule. Under such rules, reasonableness is determined by both the use of the water and the rights of other landowners. Such cases still refer to correlative rights, but differ from the California doctrine. See *id.*

### d. Restatement

The Restatement (Second) of Torts § 858 (1979) essentially adopts a correlative rights rule that allows for a balancing of many factors to determine reasonableness. Although the rule is initially

### Report of the

stated in terms of “reasonable use” similar to the American rule, it adds exceptions that draw on principles of correlative rights. The Restatement rule finds its support in principles of nuisance law and has been suggested as the basic framework for well interference cases. See Richard S. Harnsberger & Norman W. Thorson, *Nebraska Water Law & Administration* § 5.27 (Butterworth Legal Publishers 1984).

The Restatement, § 858 at 258, states in part as follows:

(1) A proprietor of land or his grantee who withdraws ground water from the land and uses it for a beneficial purpose is not subject to liability for interference with the use of water by another, unless

- (a) the withdrawal of ground water unreasonably causes harm to a proprietor of neighboring land through lowering the water table or reducing artesian pressure,
- (b) the withdrawal of ground water exceeds the proprietor's reasonable share of the annual supply or total store of ground water, or
- (c) the withdrawal of the ground water has a direct and substantial effect upon a watercourse or lake and unreasonably causes harm to a person entitled to the use of its water.

Although § 858 is under chapter 41, topic 4, entitled “Interference With the Use of Water,” id. at 253, a note on that topic's scope shows that it is intended to apply to water that is hydrologically connected to ground water. The note states in part: “This Topic covers the rights and liabilities of possessors of land and others withdrawing ground water. It also states the rules governing the rights and liabilities of persons using water where ground water is interconnected with the water of watercourses and lakes.” Id. Several courts have adopted the Restatement approach. *Cline v. American Aggregates*, 15 Ohio St.3d 384, 474 N.E.2d 324 (1984); *State v. Michels Pipeline Construction, Inc.*, supra; *Maerz v. U S Steel Corp.*, 116 Mich. App. 710, 323 N.W.2d 524 (1982).

In addition, the Restatement keeps older definitions of ground water and surface water, but abandons any common-law distinctions between underground watercourses and percolating water. Ground water is defined as “water that naturally lies or flows under the surface of the earth.” Restatement, supra, § 845 at 198. See, also, *Maddocks v. Giles*, 728 A.2d 150 (Me.1999). Comment b. of the Restatement, supra, recognizes that ground water may be connected to other forms of water. The comment states: “Most ground water is moving in the hydrologic cycle. It originates from infiltration of precipitation and inflow of streams; it discharges into springs, streams, lakes and oceans. Some ground water is sidetracked from the cycle in closed basins where geologic formations isolate it from recharge or discharge.” Id. at 199.

Although the Restatement rule is derived from principles of reasonable use, the rule differs from the American rule because it balances the equities and hardships between competing users.

**Department of Natural Resources**

Maddocks v. Giles, *supra*. The Restatement (Second) of Torts § 858, comment b. at 259 (1979), notes in part:

The general rule is phrased in terms of nonliability in order to carry forward the policy of encouraging ground water use by permitting more or less unrestricted development of the resource by those who have access to it. The policy and the rule are justified by the fact that since most ground water basins are very large and contain vast quantities of water, it is usually impossible for a single water user to capture the entire supply and leave no water for others.

Comment c. at 259-60 provides:

Exceptions to the general rule are stated in Clauses (a), (b), and (c) of Subsection (1). They incorporate all grounds of liability for use of ground water recognized by the common law but remove some of the restrictions contained in those rules of liability. The majority “American rule of reasonable use” ... was phrased in terms of the overlying landowner's right to capture ground water, limited by restrictions on the place of use of the water. In operation this protected small wells for domestic and agricultural uses from the harmful effects of large wells for municipal and industrial supply. The first exception to nonliability, contained in Clause (1)(a), continues this protection but follows a modern tendency to extend similar protection to cases of harm done by unreasonably large withdrawals for operations conducted on overlying lands.

The second exception, Clause (1)(b), imposes liability upon a landowner who withdraws more than his reasonable share of the common supply. This has always been a possible outcome of a controversy concerning ground water if the source could be classified as an underground stream or if the rule of correlative rights were applied. The concept of underground streams was unscientific and its application could be quite arbitrary and the applicability of the rule of correlative rights was in doubt in many states. This exception merges the two rules and makes it possible to apportion shares of the water in the source to the owners of overlying land whenever total withdrawals reach such magnitude that it is necessary to protect the share of an individual landowner from appropriation by others.

The last exception, Clause (1)(c), restates the conditions for recognizing that ground water and surface water are often closely interrelated and should be treated as a single source. In the past this took many forms. Withdrawals of ground water have been called unreasonable when they reduced the flow of springs. A variant of the underground stream concept has enabled the courts to regulate some ground water as the underground segment of a surface stream. The part of an aquifer in contact with the bed and banks of a stream has been called the underflow of the stream and treated as part of it. This Section substitutes a pragmatic test for determining the interconnection instead of employing these doubtful and unscientific categorizations.

### Report of the

Thus, under the Restatement, reasonableness of use is determined on a case-by-case basis and many factors can be considered; the test is flexible. The test for reasonableness is provided in the Restatement:

The determination of the reasonableness of a use of water depends upon a consideration of the interests of the riparian proprietor making the use, of any riparian proprietor harmed by it and of society as a whole. Factors that affect the determination include the following:

- (a) The purpose of the use,
- (b) the suitability of the use to the watercourse or lake,
- (c) the economic value of the use,
- (d) the social value of the use,
- (e) the extent and amount of harm it causes,
- (f) the practicality of avoiding the harm by adjusting the use or method of use of one proprietor or the other,
- (g) the practicality of adjusting the quantity of water used by each proprietor,
- (h) the protection of existing values of water uses, land, investments and enterprises, and
- (i) the justice of requiring the user causing harm to bear the loss.

Restatement (Second) of Torts § 850A at 220 (1979).

#### e. Common-Law Claims in Disputes Between Ground Water Users in Nebraska

We have never been confronted with whether a surface water appropriator may bring a common-law claim against the user of hydrologically connected ground water. We have, however, recognized that a ground water user may bring a common-law claim against another ground water user. We generally have stated the common law in a manner consistent with the American rule blended with a rule of correlative rights. For example, we have stated:

[T]he owner of land is entitled to appropriate subterranean waters found under his land, but he cannot extract and appropriate them in excess of a reasonable and beneficial use upon the land which he owns, especially if such use is injurious to others who have substantial rights to the waters, and if the natural underground supply is insufficient for all owners, each is entitled to a reasonable proportion of the whole, and while a lesser number of states have adopted this rule, it is in our opinion, supported by the better reasoning.

*Olson v. City of Wahoo*, 124 Neb. 802, 811, 248 N.W. 304, 308 (1933). See, also, *Metropolitan Utilities Dist. v. Merritt Beach Co.*, 179 Neb. 783, 140 N.W.2d 626 (1966); *Luchsinger v. Loup*

## Department of Natural Resources

River Public Power District, 140 Neb. 179, 299 N.W. 549 (1941); *Osterman v. Central Nebraska Public Power and Irrigation District*, 131 Neb. 356, 268 N.W. 334 (1936), overruled on other grounds, *Wasserburger v. Coffee*, 180 Neb. 149, 141 N.W.2d 738 (1966). We have also discussed, but never applied, the Restatement, *supra*. *Prather v. Eisenmann*, 200 Neb. 1, 261 N.W.2d 766 (1978).

### (ii) Adoption of Restatement for Disputes Between Surface Water Users and Ground Water Users

Having reviewed the common-law rules, we now consider whether we will recognize a common-law claim for interference with surface water by the user of hydrologically connected ground water.

Initially, we reject a rule that would bar a surface water appropriator from recovering in all situations. Such a rule would ignore the hydrological fact that a ground water user's actions may have significant, negative consequences for surface water appropriators. Instead, the common law should acknowledge and attempt to balance the competing equities of ground water users and surface water appropriators; the Restatement approach best accomplishes this. The Restatement recognizes that ground water and surface water are interconnected and that in determining the rights and liabilities of competing users, the fact finder needs broad discretion. Thus, when applying the Restatement, the fact finder has flexibility to consider many factors such as those listed in § 850A, along with other factors that could affect a determination of reasonable use.

Adoption of the Restatement is the modern trend. See *Cline v. American Aggregates*, 15 Ohio St.3d 384, 474 N.E.2d 324 (1984); *State v. Michels Pipeline Construction, Inc.*, 63 Wis.2d 278, 217 N.W.2d 339 (1974); *Maerz v. U S Steel Corp.*, 116 Mich. App. 710, 323 N.W.2d 524 (1982). Further, commentators have recommended the adoption of the Restatement to both this court and the Legislature. See Richard S. Harnsberger et al., *Groundwater: From Windmills to Comprehensive Public Management*, 52 Neb. L.Rev. 179 (1973).

Accordingly, we adopt the Restatement to govern conflicts between users of hydrologically connected surface water and ground water. Specifically, we hold:

A proprietor of land or his [or her] grantee who withdraws ground water from the land and uses it for a beneficial purpose is not subject to liability for interference with the use of water of another, unless ... the withdrawal of the ground water has a direct and substantial effect upon a watercourse or lake and unreasonably causes harm to a person entitled to the use of its water.

Restatement (Second) of Torts § 858(1)(c) at 258 (1979). Whether a ground water user has unreasonably caused harm to a surface water user is decided on a case-by-case basis. In making the reasonableness determination, the Restatement, *supra*, § 850A, provides a valuable guide, but we emphasize that the test is flexible and that a trial court should consider any factors it deems relevant.

### **Report of the**

We digress momentarily to offer a word of caution. Although the issue of available remedies is not yet before us, courts should be cautious when considering remedies for interference with surface water. For example, because the recharge of a stream that has dried up because of well pumping could take years, an injunction against pumping might only serve to deprive everyone in a water basin. Such a remedy would be unreasonable and inequitable. Likewise, a court can consider a surface water appropriator's ability to obtain an exception to stays on drilling new wells, or any additional programs that might provide relief.

#### **(iii) Has Spear T Stated Claim Under Restatement?**

Having adopted the Restatement approach, we next consider whether Spear T has stated a claim upon which relief can be granted. Our review of Spear T's complaint shows that it did allege—although not precisely—that the appellees' withdrawal of ground water has directly and substantially affected Pumpkin Creek. However, although Spear T alleged that it has suffered harm, it did not allege that the appellees have unreasonably caused that harm. Thus, Spear T has failed to state a claim upon which relief can be granted.

We determine, however, that Spear T should be allowed to amend its complaint. Leave to amend should be granted liberally when justice so requires. *Frey v. City of Herculaneum*, 44 F.3d 667 (8th Cir.1995). Accordingly, we determine that the district court erred when it dismissed Spear T's complaint with prejudice for failure to state a claim.

### **2. Abrogation**

Having concluded that a common-law claim exists and that Spear T could amend its claim, we turn to the appellees' contention that by passing the GWMPA, the Legislature has abrogated the common-law claim. We have also asked the parties to brief whether 2004 Neb. Laws, L.B. 962, has abrogated any common-law claim.

#### **(a) GWMPA**

The Legislature is free to create and abolish rights as long as no vested right is disturbed. *Colton v. Dewey*, 212 Neb. 126, 321 N.W.2d 913 (1982). But statutes which change or take away a common-law right must be strictly construed. Any statutory construction restricting or abolishing common-law rights should not be adopted, unless the plain words of the statute compel such result. *Macku v. Drackett Products Co.*, 216 Neb. 176, 343 N.W.2d 58 (1984).

Nothing in the GWMPA expressly abrogates a common-law claim by a surface water user against a ground water user. Thus, any abrogation would have to be plainly compelled by the operation of the GWMPA.

We begin with the findings that the Legislature made in support of the GWMPA. The GWMPA initially states in part at § 46-656.02:

## Department of Natural Resources

The Legislature finds that ground water is one of the most valuable natural resources in the state and that an adequate supply of ground water is essential to the general welfare of the citizens of this state and to the present and future development of agriculture in the state. The Legislature recognizes its duty to define broad policy goals concerning the utilization and management of ground water and to ensure local implementation of those goals.

Every landowner shall be entitled to a reasonable and beneficial use of the ground water underlying his or her land subject to the provisions of Chapter 46, article 6, and the Nebraska Ground Water Management and Protection Act and the correlative rights of other landowners when the ground water supply is insufficient for all users. The Legislature determines that the goal shall be to extend ground water reservoir life to the greatest extent practicable consistent with beneficial use of the ground water and best management practices.

The Legislature further recognizes and declares that the management, protection, and conservation of ground water and the beneficial use thereof are essential to the economic prosperity and future well-being of the state and that the public interest demands procedures for the implementation of management practices to conserve and protect ground water supplies and to prevent the contamination or inefficient or improper use thereof. The Legislature recognizes the need to provide for orderly management systems in areas where management of ground water is necessary to achieve locally determined ground water management objectives and where available data, evidence, or other information indicates that present or potential ground water conditions, including subirrigation conditions, require the designation of areas with special regulation of development and use.

(Emphasis supplied.) The Legislature further provided at § 46-656.05:

- (1) The management, conservation, and beneficial use of hydrologically connected ground water and surface water are essential to the continued economic prosperity and well-being of the state, including the present and future development of agriculture in the state;
- (2) Hydrologically connected ground water and surface water may need to be managed differently from unconnected ground water and surface water in order to permit equity among water users and to optimize the beneficial use of interrelated ground water and surface water supplies;
- (3) Natural resources districts already have significant legal authority to regulate activities which contribute to declines in ground water levels and to nonpoint source contamination of ground water and are the preferred entities to regulate, through ground water management areas, ground water related activities which are contributing to or are, in the reasonably foreseeable future, likely to contribute to conflicts between ground water users and surface water appropriators or which may be necessary in order to resolve disputes over interstate compacts or decrees, or to carry out the provisions of other formal state contracts or agreements;
- (4) The Department of Natural Resources is responsible for regulation of water resources and local surface water project sponsors are responsible for much of the structured irrigation utilizing surface water supplies, and these entities should be responsible for regulation of surface water

## Report of the

related activities which contribute to such conflicts or provide opportunities for such dispute resolution;

(6) All involved natural resources districts, the department, and surface water project sponsors should cooperate and collaborate on the identification and implementation of management solutions to such conflicts or provide opportunities for mitigation or elimination of such disputes or difficulties.

These legislative findings do not indicate an intent to abrogate the common law. In fact, the language that we have italicized in § 46-656.02 indicates that, at least concerning disputes between multiple ground water users, the Legislature was aware of and meant to preserve the common law.

Further, if the Legislature wanted to preempt a common-law claim, then the GWMPA would contain adjudicative procedures and remedies designed to resolve individual disputes between water users. But that is not the case. Instead, a review of the GWMPA shows that it contains procedures meant to identify areas where water issues exist and to create general regulations to address those issues.

To address issues involving the quantity and quality of ground water, the GWMPA requires the NRD's to prepare a ground water management plan. § 46-656.12. The plan's purpose is to set out each NRD's broad policy goals. In the plan, the NRD's are to set out their ground water supplies and needs. In addition, the NRD's are required to set out any proposals for conservation and or supply augmentation, as well as any proposed management areas. Once an NRD completes its management plan, the Department of Natural Resources (hereinafter Department) reviews it for approval. § 46-656.14. If the Department denies approval, then the NRD may either amend the plan or keep it the same. It must then submit the amended or original plan to the Department with explanations on how the changes, if any, have met the Department's concerns. § 46-656.15.

Once the Department has approved the management plan or the NRD has complied with § 46-656.15, the NRD may create a management area within the NRD, but it is not required to do so. The procedures for creating and modifying a management area are set out in §§ 46-656.19 through 46-656.21. After a public hearing on whether to create a management area, the NRD must determine whether to do so. If it decides to create the management area, then the GWMPA provides that it shall adopt a control from a list in § 46-656.25. This list, however, is not specifically tailored to adjudicate conflicts between ground water users and surface water appropriators. Instead, it contains a list of regulatory suggestions that can be used to meet an array of water issues.

In fact, the only provision of the GWMPA that might be construed as addressing individual conflicts between ground water users and surface water appropriators is § 46-656.28. But we do not read this as abrogating a common-law claim that a surface water user might have against a ground water user. Under § 46-656.28(1):

If a district on its own motion or following a request by a surface water appropriator, surface water project sponsor, ground water user, the Department of Natural Resources, or another state

## Department of Natural Resources

agency has reason to believe that a management area should be designated for integrated management of hydrologically connected ground water and surface water or that controls in a management area should be adopted to include such integrated management, the district may utilize the procedures established in sections 46-656.19 to 46-656.21 or may request that the affected appropriators, the affected surface water project sponsors, and the Department of Natural Resources consult with the district and that studies and a hearing be held on the preparation of a joint action plan for the integrated management of hydrologically connected ground water and surface water. Thus, under this section, surface water appropriators and ground water users can request that the NRD take action concerning disputes arising out of hydrologically connected ground water.

But § 46-656.28(1) is ambiguous as to what happens once a party requests that an NRD take action. The statute may be read in several ways. First, it could allow the NRD discretion to (1) use §§ 46-656.19 to 46-656.21 to either create a management area and adopt controls or modify controls in an existing management area, (2) begin the process for adopting a joint action plan under the remainder of § 46-656.28, or (3) do nothing. Alternatively, § 46-656.28(1) could be read to mean that if the NRD concludes there is a problem, then it must either (1) use §§ 46-656.19 to 46-656.21 to either create a management area and adopt controls or modify controls in an existing management area or (2) begin the process for adopting a joint action plan.

But regardless whether § 46-656.28 gives the NRD discretion or requires the implementation of a management area, the statute does not, as the appellees suggest, provide a surface water user with an administrative adjudication. Instead, it provides a method for the surface water user to commence administrative rulemaking. If, following a request by the surface water user, the NRD chooses to create a management plan, the goal is not to adjudicate a specific dispute with trial proceedings, but to develop controls to address the area's water problems by employing the traditional tools of rulemaking, i.e., studies and public meetings. The same is true if the NRD begins the process of creating a joint action plan, except that if the NRD chooses this route, the Department is also involved.

Moreover, regardless of which process is chosen, § 46-656.28 does not authorize the NRD or the Department to remedy any past harm done to a complaining party. The steps that the NRD and the Department can take are only prospective: This is consistent with rulemaking, not adjudication, and further demonstrates that § 46-656.28 does not abrogate the common law.

To the extent there is ambiguity regarding the GWMPA, the legislative history also shows that the Legislature did not intend for the GWMPA to abrogate a common-law claim. The GWMPA was significantly revised in 1996 to address the relationship between surface and ground water in response to concerns that the State of Kansas might file a lawsuit over issues arising from the Republican River Compact. A reading of the history as a whole shows that the concern was implementing a system that could reduce future conflicts. Nothing indicates an intent for the GWMPA to replace common-law tort actions or to provide a procedure to address disputes between individual parties. Instead, the intent was to allow the NRD greater flexibility to create plans in areas of conflict and create cooperation between the NRD's and the Department when necessary, but not to resolve specific existing conflicts. See, e.g., Floor Debate, 1996 Neb. Laws, L.B. 108, 94th Leg., 2d Sess. (Mar. 13, 1996). In the floor debate, it was recognized that

### Report of the

“litigation ... is out there, and the lawsuits are going to happen or not happen, separate and apart from the legislation ... in 108.” *Id.* at 12772. After a discussion recognizing that a person harmed by ground water use could sue, it was noted that the Legislature’s goal was to mitigate litigation, but there was no discussion of abrogating claims. Instead, when asked about compensation for harm, the senator introducing the bill stated:

[T]he question of compensation is something that is beyond this bill. The council approached it several times and was unable to address it. My position has been what we need to do now is to take care of the conjunctive use problem. If there are significant groups that are interested in talking about the whole question of compensation and who should be compensated when, that’s certainly one I’d be willing to sit down and help organize and look at, but you have some very complicated questions there.

*Id.* at 12816.

Thus, we determine that the GWMPA does not show either an express or implied abrogation of the common law. Although we believe the GWMPA is a step toward reducing future conflicts through general regulation and not an attempt to replace a common-law claim with a system of administrative adjudication, we do not intend to discourage the Legislature from acting in this area. Ideally, the Legislature would develop a comprehensive administrative appropriation system, including procedures and remedies, to adjudicate direct conflicts between ground water and surface water users in Nebraska. This would be consistent with how most legislatures in western states have addressed conflicts between water users. See Restatement (Second) of Torts, ch. 41, topic 4 (1979).

(b) L.B. 962

We asked the parties to also address 2004 Neb. Laws, L.B. 962, which allows further action by the NRD’s and the Department to regulate ground water pumping and avoid overpumping in areas where depletion of surface water is a concern. Although we note that L.B. 962 takes further steps to help prevent conflicts, we do not address the application of L.B. 962 because the act does not operate retroactively and, thus, does not affect this appeal.

### 3. Primary Jurisdiction

Next, we consider the appellees’ argument that the rule of primary jurisdiction requires this court to defer to the NRD before determining the issues presented in this appeal. The appellees’ arguments on this issue are blurred. In their supplemental brief, the appellees contend that this court should defer deciding the issues presented and allow the NRD to decide them. The appellees, however, concede in their brief that the appeal involves questions of law that are not subject to the primary jurisdiction doctrine. Thus, the parties appear to agree that this court must decide what, if any, claim is available. But the appellees argue that issues of remedies for any given claim should be decided by the NRD, stating:

Appellees’ reliance upon the doctrine of primary jurisdiction relates more specifically to the second level of inquiry when evaluating the questions at hand. That level of inquiry relates to

## Department of Natural Resources

the nature of the remedies that are available to surface water users (or other ground water users) when the water supply in a particular basin ... is inadequate for all of the demands. The primary jurisdiction doctrine requires that the resolution of the technical matters associated with the relative rights of surface water users and ground water users be made by the agencies that have the special competence, or administrative expertise, to make such decisions.

Consolidated supplemental brief for appellees at 23.

The primary jurisdiction doctrine applies whenever enforcement of a claim, originally cognizable in the courts, requires the resolution of issues that have been placed within the special competence of an administrative body in accordance with the purposes of a regulatory scheme. *In re Interest of Battiato*, 259 Neb. 829, 613 N.W.2d 12 (2000). Whether the purposes of the administrative act require that the administrative agency should first pass on a question depends on whether the question raises policy issues that should be considered by the administrative agency in the interests of uniformity and administrative expertise. *Id.*

Application of the primary jurisdiction doctrine does not excuse the court from deciding the issue. Instead, it delays the process pending referral of the issues to the administrative body for its views. See, e.g., *People v. Fremont Energy Corp.*, 651 P.2d 802 (Wyo.1982). The controverted question and the inquiry necessary for its solution are the determining factors. *In re Interest of Battiato*, *supra*. But of most importance, the doctrine does not apply when a pure question of law is at issue. *Id.*

Moreover, courts commonly hold that actions seeking damages for nuisance or other common-law tort actions for impairment of water rights are traditionally cognizable by the courts without reference to agency expertise or discretion. Accordingly, exercise of the primary jurisdiction doctrine is inappropriate in those cases. See, e.g., *Freels v. Northrup*, 678 S.W.2d 55 (Tenn.1984); *G & A Contractors, Inc. v. Alaska Greenhouses, Inc.*, 517 P.2d 1379 (Alaska 1974).

Here, applying the primary jurisdiction doctrine is inappropriate for a number of reasons. First, as the appellees admit, the present appeal involves issues of law that are not subject to the primary jurisdiction doctrine. The primary issue in the action is whether a common-law claim has been stated. Such a determination is appropriately made by the court.

Further, to the extent the appellees contend that the NRD should determine the remedy, the issue of appropriate remedy is not before this court. But, if it were, applying the primary jurisdiction doctrine would be inappropriate. The determination of facts and award of damages, an injunction, or other equitable remedy for a common-law tort or equity action is in the province of the judicial system. See *Gourley v. Nebraska Methodist Health Sys.*, 265 Neb. 918, 663 N.W.2d 43 (2003) (issue of available remedies is question of law). Moreover, as we discussed in the abrogation portion of our analysis, there is no statutory requirement that the NRD's provide a remedy to a surface water appropriator who has been denied water because of the use of ground water. In particular, there is no statutory authority for the NRD's to award damages. At most, the GWMPA appears to allow the NRD's the ability to take regulatory action to prevent future conflicts, and to issue cease and desist orders to enforce those regulations.

#### Report of the

Moreover, policy considerations also make the application of the primary jurisdiction doctrine inappropriate. One of the principal considerations of the doctrine is to avoid inconsistent results. With 23 NRD's in Nebraska, all of which consist of elected officials, applying the primary jurisdiction doctrine would allow for the future possibility of up to 23 different rules and remedies in Nebraska for interference with surface water by a ground water user. See Nebraska Blue Book 2002-03 at 919-21. Instead of deferring jurisdiction to NRD's who might act inconsistently and apply differing rules, it is better to allow the courts, which are bound by legal precedent, to try the actions. Because of the questions of law involved and the lack of statutory authority to provide all forms of relief prayed for in the complaint, exercise of the primary jurisdiction doctrine is inappropriate.

#### 4. Joinder of Parties

Spear T alleges that the district court erred when it dismissed for failure to join all necessary parties. The appellees argue that all well users in the Pumpkin Creek basin must be joined in the lawsuit.

The presence of necessary parties to a suit is a jurisdictional matter and cannot be waived by the parties; it is the duty of the plaintiff to join all persons who have or claim any interest which could be affected by the judgment. *Robertson v. School Dist. No. 17*, 252 Neb. 103, 560 N.W.2d 469 (1997); *Hoiengs v. County of Adams*, 245 Neb. 877, 516 N.W.2d 223 (1994). An indispensable or necessary party to a suit is one who has an interest in the controversy to an extent that such party's absence from the proceedings prevents a court from making a final determination concerning the controversy without affecting such party's interest. See, Neb.Rev.Stat. § 25-323 (Cum.Supp.2004); *Robertson v. School Dist. No. 17*, supra; *Calabro v. City of Omaha*, 247 Neb. 955, 531 N.W.2d 541 (1995).

A plaintiff, however, need not join all tort-feasors as defendants in an action for damages. Every joint tort-feasor is liable for all damages to which his or her conduct has contributed, and it is no defense that these damages would not have occurred without the concurring misconduct of another person. *Battle Creek State Bank v. Preusker*, 253 Neb. 502, 571 N.W.2d 294 (1997).

We determine that all well users in the basin are not indispensable parties who would need to be joined to satisfy jurisdiction. Accordingly, the district court erred when it dismissed the complaint with prejudice for failure to join necessary parties.

#### V. CONCLUSION

We adopt Restatement (Second) of Torts §§ 858 and 850A (1979) for resolving disputes between users of hydrologically connected ground water and surface water. Because we adopt the Restatement, we determine that the district court erred when it dismissed the complaint with prejudice for failure to state a claim. Although Spear T did not precisely state a claim under the Restatement, it should be provided the opportunity to amend its complaint to state a claim.

**Department of Natural Resources**

We further determine that the district court erred when it dismissed the complaint for lack of subject-matter jurisdiction and failure to join necessary parties. Accordingly, we reverse, and remand for further proceedings.

Reversed and remanded for further proceedings.

270 Neb. 108, 699 N.W.2d 372

In re Complaint of CENTRAL NEBRASKA PUBLIC POWER AND IRRIGATION DISTRICT.  
Central Nebraska Public Power and Irrigation District (CNPPID), appellant,

v.

The persons identified as registered irrigation well owners located in the Platte River watershed as listed in the Department of Natural Resources' database upstream of CNPPID's diversion dam and Nebraska Department of Natural Resources, appellees.

NEBRASKA SUPREME COURT CASE No. S-04-836.

July 1, 2005.

1. **Administrative Law:** Appeal and Error. On questions of law, which include the meaning of statutes, a reviewing court is obligated to reach its conclusions independent of the legal determinations made by the director of the Department of Natural Resources.
2. **Irrigation.** The system of irrigation in Nebraska has its foundation in statutory enactments and constitutional provisions.
3. **Irrigation.** Rights of irrigation in Nebraska exist only as they have been created and defined by the law and are therefore limited in their scope by the language of their creation.
4. **Waters:** Legislature. In Nebraska, the Legislature has not developed an appropriation system that addresses direct conflicts between users of surface water and ground water that is hydrologically connected.
5. **Administrative Law:** Waters: Natural Resources Districts. Nebraska has two separate systems for the distribution of its water resources: One allocates surface water, and the other allocates ground water. The Department of Natural Resources regulates surface water appropriators, see Neb. Rev. Stat. § 61-201 et seq. (Reissue 2003 & Cum.Supp.2004), and ground water users are statutorily regulated by the natural resources districts through the Nebraska Ground Water Management and Protection Act, see Neb. Rev. Stat. § 46-701 et seq. (Reissue 2004).

WRIGHT, J.

NATURE OF CASE

The Central Nebraska Public Power and Irrigation District (Central) filed an amended complaint with the Nebraska Department of Natural Resources (Department) alleging that “registered irrigation well owners located in the Platte River watershed” were diverting waters of the Platte River without having first obtained appropriations from the Department. Central requested that the irrigation well owners be ordered to cease such “unpermitted diversions.” The Department issued an order summarily dismissing Central’s amended complaint for lack of jurisdiction to grant the relief requested. Central appealed.

SCOPE OF REVIEW

On questions of law, which include the meaning of statutes, a reviewing court is obligated to reach its conclusions independent of the legal determinations made by the director of the Department. See *In re Applications T-851 & T-852*, 268 Neb. 620, 686 N.W.2d 360 (2004).

FACTS

Central is a political subdivision of the State of Nebraska organized pursuant to Neb. Rev. Stat. § 70-601 et seq. (Reissue 2003 & Cum.Supp.2004). It owns and operates a system of reservoirs, canals, and laterals utilized for the purpose of hydropower production, delivery of irrigation water, recreation, and environmental enhancement. One of the principal features of this system is Lake McConaughy.

Central’s amended complaint alleged that persons identified as registered irrigation well owners located in the Platte River watershed were diverting waters of the Platte River and its tributaries without first obtaining appropriations from the Department. Central asserted that these unpermitted diversions caused an average annual depletion of approximately 100,000 acre feet which would otherwise be available for Central’s use pursuant to its appropriations. The complaint alleged that the ground water users were subject to the prior appropriations doctrine set forth in Neb. Const. art. XV, § 6.

In its prayer for relief, Central requested that the Department order the well owners to cease the unpermitted diversions, declare Central’s appropriations prior and superior to such diversions, take all necessary and appropriate actions to protect Central’s appropriations, and enforce the regulation of unpermitted diversions.

On July 1, 2004, the director of the Department issued an order dismissing the amended complaint for lack of jurisdiction to grant the relief requested. The director concluded as to the issue presented

### **Report of the**

that the Department's legal authority was limited to working cooperatively with the natural resources districts to address conflicts between surface water appropriators and ground water users by jointly developing and implementing integrated management plans. The order stated: "The Legislature has not given the Department ... any independent authority to regulate or administer ground water users for the benefit of surface water appropriators." Central timely perfected an appeal.

### **ASSIGNMENTS OF ERROR**

Central's assignments of error may be summarized and restated as follows: The Department erred in finding that it was without jurisdiction to "regulate or administer" ground water users for the benefit of surface water appropriators.

### **ANALYSIS**

#### **Issue Presented**

The issue presented is whether the Department has jurisdiction to adjudicate disputes between surface water appropriators and ground water users. On questions of law, which include the meaning of statutes, a reviewing court is obligated to reach its conclusions independent of the legal determinations made by the director of the Department. See *In re Applications T-851 & T-852*, 268 Neb. 620, 686 N.W.2d 360 (2004).

#### **Background of Irrigation Law in Nebraska**

The system of irrigation in Nebraska has its foundation in statutory enactments and constitutional provisions. See *Drainage District No. 1 v. Suburban Irrigation District*, 139 Neb. 460, 298 N.W. 131 (1941). Rights of irrigation in the state exist only as they have been created and defined by the law and are therefore limited in their scope by the language of their creation. *Id.* The first enactment relating to irrigation was 1889 Neb. Laws, ch. 68, p. 503, entitled " 'An act to provide for water rights and irrigation, and to regulate the right to the use of water for agricultural and manufacturing purposes.' " 139 Neb. at 468, 298 N.W. at 135. This act provided: " 'The right of the use of running water, flowing in a river or stream or down a canyon, or ravine, may be acquired by appropriation by any person or persons, company or corporation organized under the laws of the state of Nebraska....' " *Id.*

Subsequently, 1895 Neb. Laws, ch. 69, §§ 42-43, p. 260, provided:

" 'Sec. 42. The water of every natural stream not heretofore appropriated, within the state of Nebraska, is hereby declared to be the property of the public, and is dedicated to the use of the people of the state, subject to appropriation as heretofore provided.

**Department of Natural Resources**

“ ‘Sec. 43. The right to divert unappropriated waters of every natural stream for beneficial use shall never be denied. Priority of appropriation shall give the better right as between those using the water for the same purposes....’ ”

Drainage District No. 1 v. Suburban Irrigation District, 139 Neb. at 468, 298 N.W. at 135.

In 1920, the Nebraska Constitutional Convention amended Neb. Const. art. XV, §§ 4 through 6, to mimic the previously enacted legislation:

“ ‘Sec. 4. Water a Public Necessity. The necessity of water for domestic use and for irrigation purposes in the state of Nebraska is hereby declared to be a natural want.

“ ‘Sec. 5. Use of Water Dedicated to People. The use of the water of every natural stream within the State of Nebraska is hereby dedicated to the people of the state for beneficial purposes, subject to the provisions of the following section.

“ ‘Sec. 6. Right to Divert Unappropriated Waters. The right to divert unappropriated waters of every natural stream for beneficial use shall never be denied except when such denial is demanded by the public interest. Priority of appropriation shall give the better right as between those using the water for the same purpose....’ ”

(Emphasis in original.) Drainage District No. 1 v. Suburban Irrigation District, 139 Neb. at 469, 298 N.W. at 136.

In Drainage District No. 1, we first acknowledged that certain kinds of water were not subject to appropriation. There, the defendant irrigation district sought the right by eminent domain to place obstructions or dams in the plaintiff's drainage ditches. One of the controlling questions was from what source and how did the irrigation district become vested with power to use and appropriate the water out of such drainage ditches. From the history of our irrigation laws and constitutional provisions, the court concluded that the right of appropriation for irrigation was limited to the waters of the “ ‘natural streams’ of the state.’ ” Id. at 470, 298 N.W. at 136. The source of the waters contained in the drainage ditches was low-lying land which was too wet to farm, over which surface waters were diffused, and through which subterranean waters percolated. The court concluded that the drainage ditches were not natural streams or natural watercourses and that their inherent nature excluded them from the class or kind of waters to which state laws of appropriation were applicable. Because such waters were not subject to appropriation for irrigation purposes, the attempt to secure them for the irrigation district by exercising the right of eminent domain was unauthorized. Id.

Subsequent to Drainage Dist. No. 1, we recognized the potential conflicts between ground water users and surface water appropriators in Metropolitan Utilities Dist. v. Merritt Beach Co., 179 Neb. 783, 140 N.W.2d 626 (1966). In that case, an order by the director of Water Resources authorized Omaha's Metropolitan Utilities District to supplement its water supply with ground water. Pursuant to Neb.Rev.Stat. § 46-638 (Cum.Supp.1963), the director was authorized to grant permits

### Report of the

to cities to develop ground water supplies in the area served by the city. The use of ground water pursuant to a permit was governed by Neb. Rev. Stat. § 46-613 (Cum.Supp.1963).

In discussing the history of irrigation law, the court noted that it was not until 1957 that the Legislature undertook any form of ground water regulation. Such legislation provided for registration of irrigation wells, spacing of such wells, and preferences in the use of ground water. *Metropolitan Utilities Dist. v. Merritt Beach Co.*, supra. In 1959, the Legislature provided for the creation of ground water conservation districts. *Id.* In 1963, the Legislature defined ground water and required that a permit be obtained to pump underground water within 50 feet of the bank of a natural stream. *Id.* At that time, ground water was defined by Neb. Rev. Stat. § 46-635 (Cum.Supp.1963) as that water which occurs or moves, seeps, filters, or percolates through the ground under the surface of the land.

In recognizing the beginning of conflicts between ground water and surface water rights, we stated:

Acts of the Legislature were mere beginnings in the exercise of possible control and regulation of ground water. While the rights of appropriators to the use of water from rivers and streams have been protected over the years, rights in the use of ground water have not been determined nor protected, nor the public policy with reference to the use of such underground waters legislatively declared. The difficulties in administering dual conflicting principles, and fixing the rights of users thereunder, are readily apparent.

*Metropolitan Utilities Dist. v. Merritt Beach Co.*, 179 Neb. at 799, 140 N.W.2d at 636.

Recently, in *Spear T Ranch v. Knaub*, 269 Neb. 177, 691 N.W.2d 116 (2005), we addressed whether a surface water appropriator had a claim against a ground water user for interference with a surface water appropriation. *Spear T Ranch (Spear T)* had filed a complaint in the district court, alleging that it had surface water appropriations on Pumpkin Creek and that certain ground water users who had irrigation wells within the boundaries of the Pumpkin Creek basin were converting *Spear T*'s surface water rights to their own use without compensating *Spear T*. *Spear T* alleged it would be irreparably harmed if the ground water users continued to use their irrigation wells. It sought compensation for the value of the surface water appropriations allegedly taken by such ground water users and, in the alternative, special damages for the value of the water rights and injunctive relief.

*Spear T* argued that because the water in question was hydrologically connected and because *Spear T* had a prior surface water appropriation, it had priority to the water in the Pumpkin Creek basin. It asked this court to apply legislatively created surface water priorities to ground water use without considering existing common-law rules. We declined to apply the statutory surface water appropriation rules to conflicts between surface water appropriators and ground water users. While we accepted as true that the water in question was hydrologically connected, we pointed out that water rarely runs in a true underground stream. *Id.*

## Department of Natural Resources

We found no statutory authority or case law that supported applying surface water appropriations to ground water. While we recognized that most legislatures in western states had developed comprehensive appropriation systems which were overseen by administrative agencies, we pointed out that in Nebraska, the Legislature has not developed an appropriation system that addresses direct conflicts between users of surface water and ground water that is hydrologically connected. *Id.*

We recognized that the prior appropriation rule which Spear T advocated would give first-in-time surface water appropriators the right to use whatever water they wanted to the exclusion of later-in-time ground water users. We pointed out that this rule could have the effect of shutting down all the wells in any area where surface water appropriations were hydrologically connected to ground water. *Id.*

### Central's Argument

Central claims that the Nebraska Constitution charges the Department with regulating all waters of the state based upon the doctrine of prior appropriation. It relies upon Neb. Const. art. XV, § 6, and also argues that the Department is charged with administering all water of the state through a number of statutory provisions. Specifically, Central notes Neb. Rev. Stat. § 61-206(1) (Cum.Supp.2004), which provides: “The Department ... is given jurisdiction over all matters pertaining to water rights for irrigation, power, or other useful purposes except as such jurisdiction is specifically limited by statute.” In addition, Neb. Rev. Stat. § 46-226 (Reissue 2004) states: “The department shall make proper arrangements for the determination of priorities of right to use the public waters of the state and determine the same. The method of determining the priority and amount of appropriation shall be fixed by the department.”

Central asserts that Neb. Rev. Stat. § 61-201 et seq. (Reissue 2003 & Cum.Supp.2004) grants authority to the Department and that these statutes contain no limitation upon the Department's jurisdiction over matters concerning water rights.

### Department's Argument

The Department argues that it does not have authority to regulate ground water users for the benefit of surface water appropriators. It emphasizes that the jurisdiction delegated by § 61-206(1) is limited by the phrase “except as such jurisdiction is specifically limited by statute.” Brief for appellee Department at 7. It argues that Neb. Const. art. XV, § 6, refers only to “natural stream[s]” and that this is a reference to surface water only. Brief for appellee Department at 6.

The Department also relies upon Neb. Rev. Stat. § 46-703(5) (Reissue 2004), which provides: “The Department ... is responsible for regulation of surface water resources....” The Department does not claim that it lacks statutory authority to regulate surface water, but, rather, that the regulation of ground water users is beyond its authority. It cites § 46-703(3), which provides:

### Report of the

Natural resources districts ... are the preferred entities to regulate, through ground water management areas, ground water related activities which are contributing to or are, in the reasonably foreseeable future, likely to contribute to conflicts between ground water users and surface water appropriators or to water supply shortages in fully appropriated or overappropriated river basins, subbasins, or reaches.

Based upon the above statutes, the Department asserts that the regulation of ground water has been statutorily delegated to the natural resources districts.

### Resolution

In *Spear T Ranch v. Knaub*, 269 Neb. 177, 691 N.W.2d 116 (2005), we addressed whether a surface water appropriator had a claim against a ground water user for interference with a surface water appropriation. The issue of the Department's jurisdiction to hear disputes between surface water appropriators and ground water users was not presented; however, the issue is now squarely before us.

Nebraska has two separate systems for the distribution of its water resources: One allocates surface water, and the other allocates ground water. *Id.* The Department regulates surface water appropriators, see § 61-201 et seq., and ground water users are statutorily regulated by the natural resources districts through the Nebraska Ground Water Management and Protection Act, see Neb. Rev. Stat. § 46-701 et seq. (Reissue 2004).

The Nebraska Constitution does not address the use of ground water, and historically, the regulation of ground water has been governed by the rule of reasonable use. In *Metropolitan Utilities Dist. v. Merritt Beach Co.*, 179 Neb. 783, 800, 140 N.W.2d 626, 636-37 (1966), we stated: "Without any declaration of public policy as to the use of underground waters other than the constitutional declaration that they are a natural want, we adhere to the rule that such waters must be reasonably used for a beneficial purpose without waste." *Metropolitan Utilities Dist.* impliedly recognized that ground water was included in article XV, § 4 ("water ... declared to be a natural want"), but was not included in article XV, § 5 ("the water of every natural stream").

After the constitutional amendments in 1920, the Legislature did not address any form of ground water regulation until 1957. By then, the difficulties in administering dual conflicting principles between the rights of appropriators and the rights in the use of ground water and in fixing the rights of users had become readily apparent. See *Metropolitan Utilities Dist. v. Merritt Beach Co.*, *supra*.

In this case, we are presented with a question of law, and we are obligated to reach a conclusion independent of the legal determinations made by the director of the Department. See *In re Applications T-851 & T-852*, 268 Neb. 620, 686 N.W.2d 360 (2004). We conclude that the Department has no independent authority to regulate ground water users or administer ground water rights for the benefit of surface water appropriators. We do not address what relief, if any, Central might obtain under § 46-701 et seq.

**Department of Natural Resources**

This conclusion is clearly supported by our decision in *Spear T Ranch v. Knaub*, *supra*, in which we declined to apply legislatively created surface water priorities to ground water use for the reason that no statutory authority or case law supported the rationale of applying the rules relating to surface water appropriations to ground water use. We recognized that the Legislature has not developed an appropriation system that addresses direct conflicts between users of surface water and ground water that is hydrologically connected. We noted that the lack of an integrated system was reinforced by the fact that different agencies regulate ground water and surface water.

**CONCLUSION**

For the reasons set forth herein, the decision of the Department's director, which dismissed Central's amended complaint for lack of jurisdiction to grant the relief requested, is affirmed.

Affirmed.

**Report of the**

2270 Neb. 130, 699 N.W.2d 379

SPEAR T RANCH, INC., appellant and cross-appellee,  
v.

NEBRASKA DEPARTMENT OF NATURAL RESOURCES, appellee and cross-appellant.

NEBRASKA SUPREME COURT CASE No. S-04-639.

July 8, 2005.

1. **Summary Judgment:** Appeal and Error. In reviewing a summary judgment, an appellate court views the evidence in the light most favorable to the party against whom the judgment is granted and gives such party the benefit of all reasonable inferences deducible from the evidence.
2. **Pleadings: Appeal and Error.** Whether a petition states a cause of action is a question of law, regarding which an appellate court has an obligation to reach a conclusion independent of that of the trial court.
3. **Negligence.** The threshold issue in any negligence action is whether the defendant owes a legal duty to the plaintiff.
4. **Negligence.** The question of whether a legal duty exists for actionable negligence is a question of law dependent on the facts in a particular situation.
5. **Irrigation.** The system of irrigation in Nebraska has its foundation in statutory enactments and constitutional provisions.
6. **Negligence.** One cannot be negligent in failing to perform an act which it did not in the first instance have a duty or obligation to perform.
7. **Demurrer: Pleadings: Appeal and Error.** In an appellate court's review of a ruling on a demurrer, the court is required to accept as true all the facts which are well pled and the proper and reasonable inferences of law and fact which may be drawn therefrom, but not the conclusions of the pleader.

Thomas D. Oliver for appellant.

Jon Bruning, Attorney General, and Justin D. Lavene for appellee.

Steven C. Smith, of Pahlke, Smith, Snyder, Pettitt & Eubanks, G.P., Scottsbluff, for amici curiae Pathfinder Irrigation District et al.

Michael C. Klein, of Anderson, Klein, Swan & Brewster, Holdrege, for amicus curiae Central Nebraska Public Power and Irrigation District.

**Department of Natural Resources**

**HENDRY, C.J., WRIGHT, CONNOLLY, GERRARD, STEPHAN, McCORMACK, and  
MILLER-LERMAN, JJ.**

**WRIGHT, J.**

**I. NATURE OF CASE**

Spear T Ranch, Inc. (Spear T), filed a claim for damages with the State Claims Board under the State Tort Claims Act, Neb.Rev.Stat. § 81-8,209 et seq. (Reissue 2003). The board denied the claim, and Spear T subsequently brought an action against the Nebraska Department of Natural Resources (Department). Spear T alleged that the Department was negligent in failing to protect Spear T's surface water appropriations and that the Department had permitted the diversion of water from Spear T's land, which greatly reduced the value of the land and resulted in an unauthorized taking of its property without compensation. Spear T appeals from the order of the Morrill County District Court which granted the Department's motion for summary judgment and dismissed its amended petition with prejudice.

**II. SCOPE OF REVIEW**

In reviewing a summary judgment, an appellate court views the evidence in the light most favorable to the party against whom the judgment is granted and gives such party the benefit of all reasonable inferences deducible from the evidence. *Johnson v. United States Fidelity & Guar. Co.*, 269 Neb. 731, 696 N.W.2d 431 (2005).

Whether a petition states a cause of action is a question of law, regarding which an appellate court has an obligation to reach a conclusion independent of that of the trial court. *McGinn v. State Farm Mut. Auto. Ins. Co.*, 268 Neb. 843, 689 N.W.2d 802 (2004).

**III. FACTS**

Spear T is a Nebraska corporation that owns land in Morrill County. Pumpkin Creek flows through Spear T's land, and it has two surface water appropriations on Pumpkin Creek. Water appropriation A-6811 is a permit dated November 16, 1954, to divert 2.57 cubic feet per second of water. Water appropriation A-9051 is dated December 21, 1956, and permits a diversion of 1.6 cubic feet per second.

Spear T initially filed a claim for damages with the State Claims Board pursuant to the State Tort Claims Act. The board denied the claim, and Spear T subsequently brought this suit against the Department.

### **Report of the**

In its first cause of action, Spear T claimed that the Department had negligently failed to protect its appropriations by controlling the amount of ground water taken from the Pumpkin Creek basin by hydrologically connected ground water users. It claimed that this negligence arose from a common-law duty of the Department to protect surface water appropriations. Spear T claimed that as a result of the Department's negligence, Pumpkin Creek had become brackish and unsuitable for raising crops or watering livestock. Spear T claimed damages for the loss of crops and a reduction in property and aesthetic value.

Spear T also alleged that Neb.Rev.Stat. § 46-226 (Reissue 2004) imposed a duty upon the Department to make proper arrangements for the determination of priorities of the right to use the public waters of the state and to determine the same. It alleged that the Department's failure to determine priorities between surface water appropriators and ground water users had directly resulted in damages to Spear T.

As to its cause of action for inverse condemnation, Spear T claimed that Neb.Rev.Stat. § 46-159 (Reissue 2004) prohibited the diverting of water from the creek to the detriment of a party unless previous compensation is ascertained. Spear T asserted that the Department's inaction had resulted in the inverse condemnation of its vested property rights without just compensation, in violation of the Fifth Amendment to the U.S. Constitution and Neb. Const. art. I, § 21. It also claimed that the Department's actions deprived it of its constitutional rights under color of law, thereby violating 42 U.S.C. § 1983 (2000).

Spear T sought general damages for the reduction in value of its property caused by the Department's alleged negligence and for the resulting loss of hay and reduced pasture rental. It requested special damages for the loss of aesthetic value of the property and other damages allowed by law. It also sought an injunction requiring the Department to cease issuance of well permits in the Pumpkin Creek basin and to restrict the amount of water pumped from upstream wells.

The Department demurred, claiming that the petition was insufficient to state a cause of action sounding in either negligence or inverse condemnation. The district court sustained the demurrer as to Spear T's action for inverse condemnation, and Spear T was allowed to amend. Its amended petition was identical to the original petition in nearly all respects, the main exception being that Spear T eliminated all references to a violation of 42 U.S.C. § 1983.

The Department moved for summary judgment, claiming that Spear T's action was barred by applicable statutes of limitation and that it had no duty to regulate ground water use to protect Spear T's surface water rights. The Department also asserted other affirmative defenses.

Following a hearing, the district court sustained the Department's motion for summary judgment. It found that the Department had no legal duty to protect surface water appropriators from the activities of ground water users. The court also granted the Department's motion for an order dismissing Spear T's claim for inverse condemnation. Spear T timely perfected an appeal, and the Department has cross-appealed.

**Department of Natural Resources**

**IV. ASSIGNMENTS OF ERROR**

Spear T assigns the following restated errors to the order of the district court: The court erred (1) in finding that the Department had no duty to protect surface water appropriators from the effects of ground water use and (2) in finding that Spear T had no cause of action for inverse condemnation against the Department.

The Department assigns the following restated errors on cross-appeal: The district court erred (1) in failing to find that Spear T's claim was barred by the statute of limitations; (2) in failing to find that even if the Department had a duty to protect surface water appropriators from the effects of ground water irrigation, such claims were not appropriate under the State Tort Claims Act; and (3) in failing to find that Spear T had not exhausted all available administrative remedies prior to seeking judicial review.

**V. ANALYSIS**

**1. Spear T's Argument**

Spear T asserts that the Department had both a common-law duty and a statutory duty to protect the rights of surface water appropriators. As to the statutory duty, it relies upon § 46-226, which provides: "The department shall make proper arrangements for the determination of priorities of right to use the public waters of the state and determine the same. The method of determining the priority and amount of appropriation shall be fixed by the department." Spear T claims this language placed a duty upon the Department to regulate all of the waters of the state through a system of priorities. It claims that the Department had a statutory duty to establish a method for determining priority between the surface water appropriators and the ground water users, and to fix the amount of water that hydrologically connected ground water users could extract from Pumpkin Creek. Spear T also relies upon Neb.Rev.Stat. § 61-206(1) (Cum.Supp.2004), which states: "The Department of Natural Resources is given jurisdiction over all matters pertaining to water rights for irrigation ... except as such jurisdiction is specifically limited by statute." Spear T concludes this means that the Department has exclusive jurisdiction to hear and adjudicate all matters pertaining to water rights.

**2. Department's Argument**

The Department claims that it had no duty to protect appropriators of surface water from the activities of ground water users. It argues that because it had no duty, it cannot be held actionable in a claim for negligence or inverse condemnation.

The Department asserts that the Legislature is the body with authority to implement the state's water policy and that the Legislature has delegated the authority to regulate surface water to the Department and has delegated the authority to regulate ground water, including hydrologically connected ground water, to the natural resources districts. It argues that pursuant to law,

### Report of the

the Legislature has authorized the Department to regulate surface water appropriations and to protect the rights of surface water appropriators from encroachment by other surface water appropriators.

### 3. Resolution

The legal issue presented is whether the actions or inactions of the Department constituted negligence. The threshold issue in any negligence action is whether the defendant owes a legal duty to the plaintiff. *Fu v. State*, 263 Neb. 848, 643 N.W.2d 659 (2002). The question of whether a legal duty exists for actionable negligence is a question of law dependent on the facts in a particular situation. *Anderson v. Nashua Corp.*, 246 Neb. 420, 519 N.W.2d 275 (1994). Regarding questions of law, an appellate court is obligated to reach a conclusion independent of the determination made by the court below. *Trimble v. Wescom*, 267 Neb. 224, 673 N.W.2d 864 (2004).

#### (a) Common-Law Duty

Spear T relies upon *State, ex rel. Sorensen, v. Mitchell Irrigation District*, 129 Neb. 586, 262 N.W. 543 (1935), and *State v. Birdwood Irrigation District*, 154 Neb. 52, 46 N.W.2d 884 (1951), to support its position that the Department had a common-law duty to protect surface water appropriators from hydrologically connected ground water users. We conclude that neither case supports Spear T's position.

In *State, ex rel. Sorensen, v. Mitchell Irrigation District*, *supra*, the Attorney General of Nebraska instituted an action to compel Mitchell Irrigation District to comply with state law applicable to irrigation districts and to enjoin the irrigation district until it complied with such laws. We held that the State had the right to enforce compliance with laws that would protect the rights of all users of water for irrigation purposes. Contrary to Spear T's argument, *State, ex rel. Sorensen, v. Mitchell Irrigation District* did not create a common-law duty in the Department to resolve conflicts between surface water appropriators and ground water users. Instead, the authority of the State via the Attorney General to compel the irrigation district to comply with the law was created by statute.

In *State v. Birdwood Irrigation District*, *supra*, the Department of Roads and Irrigation commenced an action to cancel part of the water appropriation of the Birdwood Irrigation District. The law existing at the time, Neb.Rev.Stat. § 46-229.02 (Supp.1949), expressly authorized the Department of Roads and Irrigation to cancel a water right that had not been used for some beneficial purpose for more than 3 years. The irrigation district contended that the department was without authority to cancel the water right on certain lands. We held that the department was expressly authorized by statute to forfeit a water right where it appeared that the water appropriation had not been used for some beneficial or useful purpose.

## Department of Natural Resources

In an effort to establish a common-law duty to protect surface water appropriators, Spear T attempts to give our decisions in *State, ex rel. Sorensen, v. Mitchell Irrigation District*, *supra*, and *State v. Birdwood Irrigation District*, *supra*, an overly broad application. Neither of these cases contains language creating a duty which would require the Department to resolve conflicts between surface water appropriators and ground water users. In fact, the issue of resolving a conflict between surface water appropriators and ground water users was never presented. Both cases were decided before the Legislature first addressed ground water regulation in 1957. See *In re Complaint of Central Neb. Pub. Power*, 270 Neb. 108, 699 N.W.2d 372 (2005). While we stated in *State, ex rel. Sorensen, v. Mitchell Irrigation District*, 129 Neb. at 593, 262 N.W. at 547, that “the state has the right ... to enforce compliance with laws that will protect the rights of all users of water for irrigation purposes within the state,” this language did not establish a common-law duty in the Department to resolve conflicts between surface water appropriators and ground water users.

The system of irrigation in Nebraska has its foundation in statutory enactments and constitutional provisions. In *re Complaint of Central Neb. Pub. Power*, *supra*. Rights of irrigation in this state exist only as they have been created and defined by the law, and are necessarily limited in their scope by the language of their creation. *Id.*

### (b) Statutory Duty

The issue of whether the Department has a statutory duty to resolve conflicts between surface water appropriators and ground water users has been resolved by our decisions in *In re Complaint of Central Neb. Pub. Power*, *supra*, and *Spear T Ranch v. Knaub*, 269 Neb. 177, 691 N.W.2d 116 (2005).

In *In re Complaint of Central Neb. Pub. Power*, *supra*, we affirmed the Department’s order, which dismissed the complaint for lack of jurisdiction to grant the relief requested. Central Nebraska Public Power and Irrigation District (Central) had filed suit with the Department to stop certain ground water users from diverting water from the Platte River without first obtaining a permit from the Department. Central claimed the Department was charged with administering all waters of the state through a number of statutory provisions, specifically §§ 46-226 and 61-206(1) and Neb. Const. art. XV, § 6. The Department dismissed the complaint for lack of jurisdiction, concluding that its legal authority was limited to working cooperatively with the natural resources districts to address conflicts between surface water appropriators and ground water users by jointly developing and implementing integrated management plans. The Department’s order stated that the Legislature had not given it independent authority to regulate ground water users or administer ground water rights for the benefit of surface water appropriators.

In resolving the issue in favor of the Department, we stated: “Nebraska has two separate systems for the distribution of its water resources.... The Department regulates surface water appropriators, see § 61-201 et seq., and ground water users are statutorily regulated by

### Report of the

the natural resources districts through the Nebraska Ground Water Management and Protection Act....” See *In re Complaint of Central Neb. Pub. Power*, 270 Neb. 108, 116-17, 699 N.W.2d 372, 377-78 (2005). We concluded that the Department had no independent authority to regulate ground water users or administer ground water rights for the benefit of surface water appropriators.

In *In re Complaint of Central Neb. Pub. Power*, *supra.*, we relied upon our decision in *Spear T Ranch v. Knaub*, *supra.* In that case, the plaintiff argued that it had a prior surface water appropriation and that because the water was hydrologically connected, it had priority over the ground water users to the water in the Pumpkin Creek basin. Spear T asked this court to apply legislatively created surface water priorities to conflicts between surface water appropriators and ground water users. We declined to adopt that approach, finding no statutory authority or case law that supported applying surface water appropriations to ground water.

In the case at bar, all of Spear T’s causes of action are based upon the assumption that the Department has a duty to resolve conflicts between surface water appropriators and ground water users. It is well established that the Department has only that authority which the Legislature has specifically conferred upon it by statute or by construction necessary to achieve the purpose of the relevant act. See *In re Application A-16642*, 236 Neb. 671, 463 N.W.2d 591 (1990).

We conclude that the Department has no common-law or statutory duty to regulate the use of ground water in order to protect Spear T’s surface water appropriations. See *In re Complaint of Central Neb. Pub. Power*, *supra.* (holding that Department had no independent authority to regulate ground water users or administer ground water rights for benefit of surface water appropriators). In the absence of independent authority to regulate the use of ground water, the Department has no legal duty to resolve conflicts between surface water appropriators and ground water users. If there is no legal duty, there is no actionable negligence. *Fuhrman v. State*, 265 Neb. 176, 655 N.W.2d 866 (2003). One cannot be negligent in failing to perform an act which it did not in the first instance have a duty or obligation to perform. *Travelers Indemnity Co. v. Center Bank*, 202 Neb. 294, 275 N.W.2d 73 (1979).

In reviewing a summary judgment, an appellate court views the evidence in the light most favorable to the party against whom the judgment is granted and gives such party the benefit of all reasonable inferences deducible from the evidence. *Johnson v. United States Fidelity & Guar. Co.*, 269 Neb. 731, 696 N.W.2d 431 (2005). Viewing the evidence in the light most favorable to Spear T and giving it the benefit of all reasonable inferences deducible from the evidence, we conclude that the Department was entitled to judgment as a matter of law. The district court was correct in its determination that the Department had no duty to protect surface water appropriators from the activities of ground water users. The district court did not err in granting summary judgment on this issue.

## Department of Natural Resources

### 4. Remaining Assignment of Error

Spear T also assigns as error the district court's determination that Spear T had no cause of action for inverse condemnation. After sustaining the Department's demurrer, the court gave Spear T an opportunity to file an amended petition. Its amended petition was identical to the original petition in nearly all respects, the main exception being that it omitted all references to a violation of 42 U.S.C. § 1983.

In an appellate court's review of a ruling on a demurrer, the court is required to accept as true all the facts which are well pled and the proper and reasonable inferences of law and fact which may be drawn therefrom, but not the conclusions of the pleader. *McGinn v. State Farm Mut. Auto. Ins. Co.*, 268 Neb. 843, 689 N.W.2d 802 (2004).

Whether a petition states a cause of action is a question of law, regarding which an appellate court has an obligation to reach a conclusion independent of that of the trial court. *Id.*

Neb. Const. art. I, § 21, provides: "The property of no person shall be taken or damaged for public use without just compensation therefor." The question is, What property was taken or damaged by the Department? The Department did not have authority to regulate ground water users or administer ground water rights for the benefit of surface water appropriators. Accordingly, its action or inaction did not amount to a taking or damages as alleged by Spear T. Because Spear T had no property that was damaged or taken by the Department, Spear T could not assert a cause of action for inverse condemnation. It was not error for the district court to dismiss Spear T's cause of action for inverse condemnation.

### 5. Cross-Appeal

On cross-appeal, the Department argues that the district court erred in failing to grant it summary judgment based upon each of the reasons set forth in its motion. The court granted the motion only with respect to the Department's argument that it had no duty to protect the rights of surface water appropriators from ground water users. Because we find that summary judgment was proper based upon the Department's lack of duty, it is unnecessary to determine whether summary judgment should have been granted as to each of the reasons the Department raised in its motion.

## VI. CONCLUSION

For the reasons set forth herein, the judgment of the district court, which granted the Department's motion for summary judgment and dismissed Spear T's cause of action for inverse condemnation, is affirmed.

Affirmed.

NATURE OF CASE

The Central Nebraska Public Power and Irrigation District (Central) appeals the district court's order denying its motion to intervene. Central sought to intervene in the present matter following our remand of the cause to the district court in *Spear T Ranch v. Knaub*, 269 Neb. 177, 691 N.W.2d 116 (2005).

BACKGROUND

*Spear T Ranch, Inc.* (*Spear T*), a surface water appropriator, filed this action against numerous ground water irrigators seeking an injunction and damages for the loss of surface water from Pumpkin Creek. In *Spear T Ranch v. Knaub*, *supra*, we adopted the Restatement (Second) of Torts § 858 (1979) to govern conflicts between users of hydrologically connected surface water and ground water. We specifically held:

“A proprietor of land or his [or her] grantee who withdraws ground water from the land and uses it for a beneficial purpose is not subject to liability for interference with the use of water of another, unless ... the withdrawal of the ground water has a direct and substantial effect upon a watercourse or lake and unreasonably causes harm to a person entitled to the use of its water.”

269 Neb. at 194, 691 N.W.2d at 132. Applying the Restatement standard to *Spear T*'s complaint, we determined that although *Spear T* alleged that it had suffered a harm, it did not allege that the defendants unreasonably caused that harm. We further determined, however, that *Spear T* should be granted leave to amend its complaint. We therefore reversed the district court's order and remanded the matter for further proceedings. Following our remand of this action, Central moved to intervene as a plaintiff pursuant to Neb.Rev.Stat. § 25-328 (Cum.Supp. 2004). In its initial complaint, Central set forth, *inter alia*, the following allegations:

The Defendants are diverting the water of Pumpkin Creek ... without appropriations permitting such diversions, water which would otherwise be available for diversion pursuant to Central's appropriations....

....

### **Report of the**

... The Defendants' diversions are unreasonably causing harm to Central by reducing flow in Pumpkin Creek, and have reduced the flow available for diversion and for storage, as permitted by Central's appropriations.

... The Defendants' diversions exceed their reasonable share of the annual supply, and exceed their reasonable share of the total store of water.

... Each of Defendants' diversions is causing a direct and substantial effect on streamflow, and unreasonably causing harm to Central.

....

... The Defendants' uses are causing direct and substantial depletions of flow of Pumpkin Creek, a tributary of the North Platte River, depletions which have caused Pumpkin Creek to go dry; Central's uses have no effect on Pumpkin Creek.

As its sole remedy, Central seeks a permanent injunction, which it maintains is the only means of avoiding the harm caused by the defendants' depletions of Pumpkin Creek.

Objections to Central's intervention were filed by the numerous defendants. Following a hearing on the matter, the district court denied Central's motion to intervene. Specifically, the district court found that Central failed to show an interest in this action of such character that it would gain or lose by direct operation and legal effect of any judgment which may be rendered, that Central's complaint fails to allege the requisite legal interest in the subject matter of this action, and the injury alleged by Central does not have a sufficient nexus to this action to allow intervention. Central appeals the denial of its motion to intervene.

### **ASSIGNMENT OF ERROR**

Central assigns, rephrased and consolidated, that the district court erred by denying its motion to intervene.

### **STANDARD OF REVIEW**

Whether a party has a right to intervene in a proceeding is a question of law. *Douglas Cty. Sch. Dist. 0001 v. Johanns*, 269 Neb. 664, 694 N.W.2d 668 (2005). When reviewing questions of law, an appellate court has an obligation to resolve the questions independently of the conclusion reached by the trial court. *Id.*

### **ANALYSIS**

Central argues that they have a direct legal interest in the proceedings that entitle them to intervene pursuant to § 25-328.

## Department of Natural Resources

Section 25-328 provides:

Any person who has or claims an interest in the matter in litigation, in the success of either of the parties to an action, or against both, in any action pending or to be brought in any of the courts of the State of Nebraska, may become a party to an action between any other persons or corporations, either by joining the plaintiff in claiming what is sought by the complaint, or by uniting with the defendants in resisting the claim of the plaintiff, or by demanding anything adversely to both the plaintiff and defendant, either before or after issue has been joined in the action, and before the trial commences.

As a prerequisite to intervention under § 25-328, the intervenor must have a direct and legal interest of such character that the intervenor will lose or gain by the direct operation and legal effect of the judgment which may be rendered in the action. *Douglas Cty. Sch. Dist. 0001 v. Johanns, supra*; *In re Change of Name of Davenport*, 263 Neb. 614, 641 N.W.2d 379 (2002). An indirect, remote, or conjectural interest in the result of a suit is not enough to establish intervention as a matter of right. *Douglas Cty. Sch. Dist. 0001 v. Johanns, supra*; *In re Change of Name of Davenport, supra*. Therefore, a person seeking to intervene must allege facts showing that he or she possesses the requisite legal interest in the subject matter of the action. *Douglas Cty. Sch. Dist. 0001 v. Johanns, supra*; *In re Change of Name of Davenport, supra*.

For purposes of ruling on a motion for leave to intervene, a court must assume that the intervenor's factual allegations set forth in the complaint are true. See *In re Change of Name of Davenport, supra*. Central's complaint seeking intervention has as its sole prayer for relief that the defendants "be permanently enjoined, and for such other and further relief as may be just and equitable."

A review of the respective operative complaint of Spear T as well as Central reveals the following:

- (1) Spear T claims damages against the defendants for losses Spear T allegedly suffered as a result of the defendants' use of ground water underlying their lands. These damages are for destroying Spear T's crops, denying water to its livestock, and destroying the beauty and value of its property. Central, on the other hand, makes no claim at all for damages.
- (2) Spear T asks for injunctive relief seeking to protect its claimed interest in and ownership of the water that the defendants are pumping. This claim is specific as to water that would reach Spear T but for the actions of the defendants. Central claims that the water being used by the defendants would otherwise be available to it for principally storage use in Lake McConaughy.
- (3) The decision in *Spear T Ranch v. Knaub*, 269 Neb. 177, 691 N.W.2d 116 (2005), shows that the focus of that case was on that portion of the water used by the defendants that could be considered unreasonable. Central, however, asks for all uses upstream from it by the defendants to be permanently enjoined.
- (4) Spear T's complaint is against specific defendants. Central attempts, by its complaint in intervention, to convert this action into a global dispute between ground water and

### Report of the

surface water users. This is directly contrary to our holding in *Spear T Ranch v. Knaub*, *supra*, where we held that whether a ground water user has unreasonably caused harm to a surface water user is to be decided on a case-by-case basis.

Central's complaint claims that the defendants' alleged diversion of water from Pumpkin Creek will affect its uses for irrigation; hydroelectric production; recreation in the operation of Lake McConaughy, Lake Ogallala, Jeffrey Lake, Johnson Lake, Elwood Reservoir, and numerous smaller lakes; environmental protection and enhancement; protection of threatened and endangered species; power plant cooling; and incidental underground water storage and recovery. Except for irrigation, none of these water uses by Central are common to Spear T.

The subject matter of this action is a claim that Spear T sustained harm as a result of alleged unreasonable withdrawal of ground water by the named defendants. The Restatement rule adopted in our previous opinion reflects the need to balance the competing equities and hardships of Spear T, a surface water appropriator, and the defendant ground water users. See *Spear T Ranch v. Knaub*, *supra*. Central's interests do not factor into this equation. Central would gain or lose nothing by a damage award in favor of Spear T or a judgment in favor of the defendants. Because any injunctive relief would be tailored to redress a specific injury proved by Spear T, Central has nothing more than an indirect, remote, or conjectural interest in one possible result of the litigation between Spear T and the defendants. Indeed, the factual allegations of Central's motion to intervene would introduce an entirely new subject matter into this action: a claim by Central that the actions of ground water users caused harm to its own interests for which it would be entitled to injunctive relief. While it is free to pursue this claim in a separate action, Central has not shown that it has a direct and legal interest in the subject matter of the action asserted by Spear T, which is a prerequisite to intervention under § 25-328.

### CONCLUSION

For the reasons discussed above, we affirm the order of the district court denying Central's motion to intervene.

Affirmed.

Steven CROUSE and JoDean CROUSE, husband and wife, appellants,

v.

PIONEER IRRIGATION DISTRICT et al., appellees.

NEBRASKA SUPREME COURT CASE No. S-05-402.

Aug. 18, 2006.

1. **Mandamus: Words and Phrases.** Mandamus is a law action and is defined as an extraordinary remedy, not a writ of right, issued to compel the performance of a purely ministerial act or duty, imposed by law upon an inferior tribunal, corporation, board, or person, where (1) the relator has a clear right to the relief sought, (2) there is a corresponding clear duty existing on the part of the respondent to perform the act, and (3) there is no other plain and adequate remedy available in the ordinary course of law.
2. **Judgments: Appeal and Error.** When reviewing questions of law, an appellate court has an obligation to resolve the questions independently of the conclusion reached by the trial court.
3. **Summary Judgment: Motions to Dismiss: Rules of the Supreme Court: Pleadings.** Neb. Ct. R. of Pldg. in Civ. Actions 12(b)(6) (rev.2003) provides that when a matter outside of the pleadings is presented by the parties and accepted by the trial court, a defendant's motion to dismiss must be treated as a motion for summary judgment as provided in Neb.Rev.Stat. §§ 25-1330 to 25-1336 (Reissue 1995 & Cum.Supp.2004).
4. **Summary Judgment: Proof.** The party moving for summary judgment has the burden to show that no genuine issue of material fact exists and must produce sufficient evidence to demonstrate that it is entitled to judgment as a matter of law.
5. **Waters: Property.** The principal purpose for the organization of an irrigation district is to furnish water for irrigation to all landowners within the district upon fair and equitable terms and conditions.
6. **Mandamus: Public Officers and Employees.** Mandamus is available to enforce the performance of ministerial duties of a public official but is not available if the duties are quasi-judicial or discretionary.
7. **Mandamus.** A duty or act is ministerial when there is no room for the exercise of discretion, official or otherwise, the performance being required by direct and positive command of the law.

**Report of the**

**HENDRY, C.J., WRIGHT, CONNOLLY, GERRARD, STEPHAN, McCORMACK, and  
MILLER-LERMAN, JJ.**

**STEPHAN, J.**

Steven Crouse and JoDean Crouse brought this action for mandamus to require Pioneer Irrigation District (District) and its individual directors to exclude 200 acres of the Crouse's farmland from the District and to refund taxes which the Crouses paid to the District on that land. Following an evidentiary hearing, the district court for Dundy County sustained a motion to dismiss filed by the District and its directors. The Crouses filed this timely appeal, which we removed to our docket on our own motion pursuant to our statutory authority to regulate the caseloads of the appellate courts of this state. See Neb.Rev.Stat. § 24-1106(3) (Reissue 1995). Finding no error, we affirm the judgment of the district court.

**I. BACKGROUND**

On or about January 1, 1994, the Crouses purchased 545 acres of land in Dundy County, Nebraska, from the Farmers Home Administration (FmHA). Of the land purchased, 301 acres were located within the District in Dundy County. At the time of the Crouses' purchase, the District held water appropriation D-1025, which was a permit to divert water from the North Fork of the Republican River at a specific point in Yuma County, Colorado.

On February 10, 1995, the then Department of Water Resources (Department) gave notice of an adjudication hearing concerning portions of water appropriation D-1025. The Department held a prehearing conference on February 22 for the purpose of reviewing Department records with members of the District board and irrigators appropriating water under D-1025. At the adjudication hearing, the Department considered whether some of the water rights granted by D-1025, including rights attached to 200 unirrigated acres of the Crouses' land, should be canceled under the provisions of Neb.Rev.Stat. § 46-229.04(2) (Reissue 1993), which provided in relevant part:

If it is determined that such water has not been put to beneficial use or has ceased to be used for such purpose for more than ten consecutive years, the water right shall be declared canceled and annulled, except that ... sufficient cause for nonuse shall be deemed to exist ... if the landowner used the available water supply on only part of the land under the water appropriation because of an inadequate water supply.

For the sake of completeness, we note that § 46-229.04 has since been amended in ways not applicable to this action. See Neb.Rev.Stat. § 46-229 (Reissue 2004).

Steven Crouse appeared at the Department adjudication hearing and asked that the water rights for the 200 acres remain with the property. Evidence established that from 1985 to 1994, the 200 acres were owned by FmHA following repossession. A representative of FmHA testified that during the time the property was owned by FmHA, it was "prevented from being irrigated by government regulations." Steven Crouse testified that after he purchased the land, he chose not to use district water for the 200 acres at issue because he felt that there would be too much waste

**Department of Natural Resources**

in transporting water from the canal to his property. He further testified that he planted crops which would not need a lot of water. On April 9, 1997, the Department issued an order canceling the Crouses' right to irrigate the 200 acres based upon its finding that the land had not been irrigated within the previous 10 years and that therefore, the nonuse provision set forth in § 46-229.04(2) applied. Notice of the Department's order was sent to the Crouses. The record does not reflect whether they appealed the decision of the Department pursuant to their rights under Neb.Rev.Stat. § 46-229.05 (Reissue 1998).

On or about May 26, 2004, the Crouses filed a petition with the board of directors of the District requesting that the 200 acres at issue be excluded from the District pursuant to Neb.Rev.Stat. §§ 46-174 to 46-184 (Reissue 2004), and further requesting that all taxes paid to the District on such property be refunded pursuant to § 46-184. The Crouses based their request on the District's failure to provide water for irrigation of the 200 acres and upon an anticipated inability of the District to be able to do so in the future because of the loss of water rights. The board of directors held a meeting on the Crouses' petition on or about July 22. No landowners objected to the petition, but the board did not reach a decision on that date.

Meanwhile, pursuant to legislation enacted in 2004, the Nebraska Department of Natural Resources (DNR) provided notice to the public of its final determination that the Upper Republican Natural Resources District (Upper Republican NRD) was fully appropriated in its entirety and that it had thus placed an "immediate stay on the issuance of any new natural-flow, storage, or storage-use appropriations in the whole of the [Upper Republican] NRD." DNR also imposed stays, effective July 26, 2004, on the issuance of water well construction permits, the construction of certain new water wells, the use of existing water wells to increase the number of acres historically irrigated, and on "any increase, through use of an existing surface water right, of the number of acres historically irrigated." There is nothing in the record to indicate that the Crouses petitioned DNR for reevaluation of the order. See Neb.Rev.Stat. § 46-713(2) (Reissue 2004).

The board of directors held a meeting in September 2004 to consider the Crouses' petition for exclusion from the District, but no action could be taken, as there was not a quorum present. There were no meetings of the District board in October or November.

On December 7, 2004, the Crouses commenced this action against the District and the individuals composing its board of directors, seeking a peremptory writ of mandamus. They alleged that the District had a "clear duty" to exclude the 200 acres and to refund taxes of approximately \$41,436 which the Crouses had paid to the District from 1994 to 2004. The District and its directors filed a motion to dismiss on the ground that the Crouses failed to state a cause of action upon which relief could be granted. Thereafter, the Crouses filed a motion for peremptory writ of mandamus and memorandum in support.

The district court conducted an evidentiary hearing on both motions. The parties offered identical evidence, and it was received without objection. Following argument and briefing, the district court entered an order granting the District's motion to dismiss without leave to amend. The court reasoned that the 1997 DNR order canceling the water rights to the Crouses' 200 acres, and the Crouses' failure to appeal that order, "effectively prevent[s] the] District from delivering

## Report of the

water to the [Crouses] on the lands that they are attempting to remove from the ... District.” The court concluded that the July 2004 DNR declaration that the water in the Upper Republican NRD was fully appropriated had no effect on whether the Crouses' land was irrigable because the land became nonirrigable upon cancellation of the Crouses' water rights in 1997. Addressing the Crouses' claim that their land could not be irrigated due to natural causes, the court concluded that this court has interpreted that phrase to mean land, which, “because of the character of the land itself,” cannot be irrigated. The court concluded that under our case law, a temporary drought or a fully appropriated water right could not be a natural cause that would prevent real estate from being irrigable.

## II. ASSIGNMENTS OF ERROR

The Crouses assign three errors which can be restated as two: The district court erred (1) in determining that they were not entitled to a writ of mandamus and (2) in finding that insufficient water supply is not a natural cause of nonirrigable lands for purposes of exclusion under § 46-176.

## III. STANDARD OF REVIEW

Mandamus is a law action and is defined as an extraordinary remedy, not a writ of right, issued to compel the performance of a purely ministerial act or duty, imposed by law upon an inferior tribunal, corporation, board, or person, where (1) the relator has a clear right to the relief sought, (2) there is a corresponding clear duty existing on the part of the respondent to perform the act, and (3) there is no other plain and adequate remedy available in the ordinary course of law. *State ex rel. Steinke v. Lautenbaugh*, 263 Neb. 652, 642 N.W.2d 132 (2002); *Sydow v. City of Grand Island*, 263 Neb. 389, 639 N.W.2d 913 (2002); *Neb.Rev.Stat. §§ 25-2156 to 25-2169* (Reissue 1995 & Cum.Supp.2004). When reviewing questions of law, an appellate court has an obligation to resolve the questions independently of the conclusion reached by the trial court. *Merz v. Seeba*, 271 Neb. 117, 710 N.W.2d 91 (2006); *Magistro v. J. Lou, Inc.*, 270 Neb. 438, 703 N.W.2d 887 (2005).

## IV. ANALYSIS

As noted, both the motion for peremptory writ of mandamus and the motion to dismiss were submitted to the district court at the same time, and the same evidence was offered and received on both motions. *Neb. Ct. R. of Pldg. in Civ. Actions 12(b)(6)* (rev.2003) provides that when a matter outside of the pleadings is \*\*727 presented by the parties and accepted by the trial court, a defendant's motion to dismiss must be treated as a motion for summary judgment as provided in *Neb.Rev.Stat. §§ 25-1330 to 25-1336* (Reissue 1995 & Cum.Supp.2004). *Wise v. Omaha Public Schools*, 271 Neb. 635, 714 N.W.2d 19 (2006); *Carruth v. State*, 271 Neb. 433, 712 N.W.2d 575 (2006). The party moving for summary judgment has the burden to show that no genuine issue of material fact exists and must produce sufficient evidence to demonstrate that it is entitled to judgment as a matter of law. *New Tek Mfg. v. Beehner*, 270 Neb. 264, 702 N.W.2d 336 (2005); *Woodhouse Ford v. Laflan*, 268 Neb. 722, 687 N.W.2d 672 (2004). Because all parties rely on the same evidentiary record, we treat the facts as uncontroverted and focus our appellate review

**Department of Natural Resources**

on whether the district court erred in holding that the District and its directors were entitled to judgment as a matter of law.

**1. EXCLUSION OF LANDS FROM IRRIGATION DISTRICT**

**(a) Statutory Procedure**

Neb.Rev.Stat. §§ 46-101 to 46-128 (Reissue 2004) provides for the organization and governance of irrigation districts in Nebraska. The principal purpose for the organization of an irrigation district is to furnish water for irrigation to all landowners within the district upon fair and equitable terms and conditions. State ex rel. Blome v. Bridgeport Irr. Dist., 205 Neb. 97, 286 N.W.2d 426 (1979); State ex rel. Clarke v. Gering Irrigation District, 109 Neb. 642, 192 N.W. 212 (1923). An irrigation district formed pursuant to the enabling statutes has certain corporate powers, including authority to levy assessments and taxes against land within its boundaries. See, Neb.Rev.Stat. §§ 46-129, 46-130, and 46-131 to 46-144 (Reissue 2004); State ex rel Clarke v. Gering Irrigation District, *supra*.

There is a specific statutory procedure by which a landowner may request exclusion of lands from an irrigation district. See §§ 46-173 through 46-184.

The owner or owners in fee of one or more tracts of land which constitute a portion of an irrigation district may file \*282 with the board of directors of the district a petition praying that such tracts and any other tracts contiguous thereto may be excluded and taken from the district.

§ 46-174. Upon the filing and service of a petition to exclude lands, the district must publish notice of the filing in order to permit persons wishing to object to any change in boundaries to file written objection. § 46-175. The notice must include the time and place of the board meeting at which the petition will be considered. §§ 46-174 and 46-175. The failure of any person interested in the district to show cause in writing why the tract or tracts of land mentioned in the petition should not be excluded from the district is deemed and taken as an assent by him to the exclusion. § 46-176.

Generally, the board of directors has discretionary authority to order or deny a petition for exclusion based on the best interests of the District. § 46-177. However, § 46-176 expressly denies the board jurisdiction to hold or include any land “which cannot from any natural cause be irrigated thereby.” Where the subject land “cannot from any natural cause be irrigated,” the District is without jurisdiction to include and tax it, and it must be detached without regard to the best interests of the district. See *Smith v. Frenchman-Cambridge Irrigation Dist.*, 155 Neb. 270, 51 N.W.2d 376 (1952).

**(b) Application**

By initially petitioning the District for exclusion of their property, the Crouses invoked the District’s broad discretionary powers to consider exclusion of their land. However, by seeking a peremptory writ of mandamus, the Crouses have significantly narrowed their remedy. Mandamus is available to enforce the performance of ministerial duties of a public official

### Report of the

but is not available if the duties are quasi-judicial or discretionary. *State ex rel. City of Alma v. Furnas Cty. Farms*, 257 Neb. 189, 595 N.W.2d 551 (1999); *Pratt v. Nebraska Bd. of Parole*, 252 Neb. 906, 567 N.W.2d 183 (1997). The burden is on the Crouses to prove clearly and convincingly that the act they seek to compel is purely ministerial and that they are therefore entitled to the action. See *Krolikowski v. Nesbitt*, 257 Neb. 421, 598 N.W.2d 45 (1999). A duty or act is ministerial when there is “ “no room for the exercise of discretion, official or otherwise, the performance being required by direct and positive command of the law.” ” ...” *Pratt v. Nebraska Bd. of Parole*, 252 Neb. at 911, 567 N.W.2d at 187.

#### (i) Effect of Cancellation of Water Rights

The Crouses argue that they have a clear right to have their land excluded from the District because the District has denied their requests for water. They base their argument on *State ex rel. Blome v. Bridgeport Irr. Dist.*, 205 Neb. 97, 286 N.W.2d 426 (1979), in which we affirmed a peremptory writ of mandamus requiring an irrigation district to deliver water to the highest point on a landowner's land so as to allow all of his property within the district to be irrigated. We rejected a defense that the landowner had lost his water rights for the tracts in question, noting that the Department had original and exclusive jurisdiction to adjudicate water rights pertaining to irrigation and that there was no evidence that the Department had ever suspended or canceled any of the landowner's water rights. We concluded that the irrigation district had no power to cancel or terminate the landowner's water rights and that it could not suspend delivery of water except for nonpayment of taxes and assessments, as provided by statute and the bylaws of the district.

Based upon *State ex rel. Blome*, the Crouses argue that if the District cannot meet its obligation to provide water to their property, it has a clear duty to exclude the property from the District. However, this case is distinguishable from *State ex rel. Blome* because of the 1997 cancellation of the Crouses' water rights by the Department pursuant to § 46-229.04(2). The cancellation was based in part upon evidence that the Crouses chose not to use water available from the District for irrigation when they acquired the property from FmHA. The District has not refused to provide water as in *State ex rel. Blome*, but, rather, is legally prevented from doing so because of the cancellation of water rights due at least in part to the Crouses' own voluntary decision not to exercise their rights. Thus, *State ex rel. Blome* provides no support for the Crouses' argument that the District has a clear duty to either provide water or exclude their land from its boundaries.

#### (ii) § 46-176

As noted above, land which “cannot from any natural cause be irrigated” cannot lawfully be included in an irrigation district and taxed. § 46-176; *Smith v. Frenchman-Cambridge Irrigation Dist.*, 155 Neb. 270, 51 N.W.2d 376 (1952). See, *Birdwood Irrigation District v. Brodbeck*, 148 Neb. 824, 29 N.W.2d 621 (1947); *Andrews v. Lillian Irrigation District*, 66 Neb. 458, 97 N.W. 336 (1902). Whether such land should be included in an irrigation district and taxed “ “does not depend on what is for the best interest of the district, nor on the consent of those holding bonds issued by the district, because the statute is mandatory that it should not be thus held and taxed.” ” *Smith v. Frenchman-Cambridge Irrigation Dist.*, 155 Neb. at 277, 51 N.W.2d at 381, quoting *Andrews v. Lillian Irrigation District*, *supra*. On the other hand, if the land is irrigable or

### Department of Natural Resources

is nonirrigable for reasons other than natural causes, then the exclusive remedy for detaching lands after an irrigation district has been duly organized is found at §§ 46-174 to 46-184, and the decision regarding whether or not to exclude the land from the District is discretionary under § 46-177. See, *Sowerwine v. Central Irrigation District*, 85 Neb. 687, 124 N.W. 118 (1909); *Andrews v. Lillian Irrigation District*, *supra*. Thus, in order to have a clear legal right to exclusion of their lands from the District, the Crouses must establish that the land cannot from any natural cause be irrigated. § 46-176.

The Crouses contend that the land was made nonirrigable from a natural cause by the determination of DNR in 2004 that the Upper Republican NRD is “fully appropriated,” which they regard as a finding that natural conditions do not provide a supply of water sufficient to meet the demand. They contend that because of the stay on the issuance of any new surface water appropriations and the lack of any unappropriated water in the basin, the absence of water is a natural cause which precludes the District from irrigating their land, thereby creating a clear duty to exclude the land from the District under § 46-176.

In determining whether particular agricultural land must be excluded from an irrigation district pursuant to § 46-176, our cases look to the intrinsic characteristics of the land itself, not to external factors. In *Andrews v. Lillian Irrigation District*, 66 Neb. at 467-68, 97 N.W. at 338, this court construed the language currently set forth in § 46-176 as follows:

Evidently the Legislature meant to exclude from the irrigation district, and from taxation in support thereof, lands that were not susceptible of irrigation. If, because of the natural conformation of the surface, lands within the irrigation district lay so high as to render it impossible to conduct water thereon by means of irrigation ditches for the irrigation of the land, it would hardly be contended that such lands were not, within the meaning of the section of the statute to which attention has been directed, land “which can not from any natural cause be irrigated thereby,” and therefore could not lawfully be held in such district, and taxed to support the system. However, if land “is such as can be watered,” it may be included in an irrigation district. *Wight v. McGuigan*, 94 Neb. 358, 362, 143 N.W. 232, 234 (1913).

In *Smith v. Frenchman-Cambridge Irrigation District*, *supra*, this court addressed the question of whether certain land should be excluded from an irrigation district under § 46-176. The land was described as “very rough and rolling,” with innumerable slopes and grades and none that continue much over 150 feet in any direction. There are ditches, depressions, hills, and mounds. The topsoil is from two inches thick on the higher parts to two feet on the better parts of the land.... The subsoil is fine river sand down to shale. 155 Neb. at 275-76, 51 N.W.2d at 380. We found the record “convincing that this land cannot from natural causes be irrigated” by the district and ordered that it be excluded and prior taxes be canceled. *Id.* at 276, 51 N.W.2d at 380. \*\*730.

In *Sowerwine v. Central Irrigation District*, 85 Neb. 687, 124 N.W. 118 (1909), this court also examined the intrinsic characteristics of the land in question to determine whether it should be excluded from an irrigation district under the statutory language currently codified in § 46-176. The evidence established that during approximately 3 months of the year, a slough running through the land was “practically full of water” and another portion of the land was “more or less

## Report of the

wet and spongy,” with standing water in some places. *Id.* at 692, 124 N.W. at 119. \*286. During the rest of the year, however, the slough was “practically dry” and the remaining land was dry. *Id.* We held that in order to defeat the jurisdiction of the board to hold lands in an irrigation district, it must be “clearly shown, and in like manner found by the court, that the lands embraced within the district are, in fact, nonirrigable.” 85 Neb. at 693-94, 124 N.W. at 120. We further held that if, under the facts, there is any doubt on the subject, such doubt must be resolved in favor of the jurisdiction of the board, and the parties left to the remedy provided by statute. We concluded that from the facts summarized above, it could not be determined as a matter of law that the land was nonirrigable and that thus, exclusion was within the discretionary authority of the board.

In the case at bar, there has been no claim or showing that the intrinsic characteristics of the land in question are such that it “cannot from any natural cause be irrigated” within the meaning of § 46-176. We agree with the district court that the 2004 DNR determination is not a factor which may be considered in this analysis. Accordingly, the Crouses have not established a clear duty to exclude the land from the irrigation district which would be enforceable by mandamus. Their sole remedy is to petition for exclusion under the provisions of §§ 46-174 to 46-184, as they have apparently done.

## 2. REFUND OF IRRIGATION TAXES

The Crouses also contend that § 46-184 entitles them to a refund of taxes which they have paid to the district on the 200 acres in question. The statute upon which they rely provides in part: “In case of the exclusion of any lands under the provisions of sections 46-173 to 46-183, there shall be refunded to any and all persons who have paid any assessment or assessments to such district, or any land so excluded, any sum or sums so paid.” Because we conclude that the Crouses have no clear right enforceable by mandamus to have their property excluded from the District, it follows that they have no right in this action to a refund of taxes under § 46-184.

In reaching this conclusion, we do not address the merits of any refund claim under § 46-184 which may be asserted in the event that the board of directors of the District were at some point to exercise its discretionary power under § 46-177 to exclude lands. We further note that § 46-141 affords a separate procedure whereby a landowner who pays irrigation district assessments under protest may claim a refund upon a showing of one of three grounds stated in the statute. See *Morrow v. Farmers Irrigation District*, 117 Neb. 424, 220 N.W. 680 (1928). This case presents no issue regarding a refund claim under § 46-141.

## V. CONCLUSION

For the reasons discussed, we affirm the judgment of the district court.

Affirmed.

Department of Natural Resources

274 Neb. 96, 736 N.W.2d 716

*In re Applications of Loren W. KOCH.*  
*Loren W. Koch and Department of Natural Resources, appellees,*  
v.  
*Ronald E. Aupperle and Mary Ann Aupperle, appellants.*  
NEBRASKA SUPREME COURT CASE No. S-06-736.  
Aug. 3, 2007.

1. **Moot Question: Words and Phrases.** A case becomes moot when the issues initially presented in the litigation cease to exist, when the litigants lack a legally cognizable interest in the outcome of litigation, or when the litigants seek to determine a question which does not rest upon existing facts or rights, in which the issues presented are no longer alive.
2. **Courts: Judgments.** In the absence of an actual case or controversy requiring judicial resolution, it is not the function of the courts to render a judgment that is merely advisory.
3. **Courts: Justiciable Issues.** A court decides real controversies and determines rights actually controverted, and does not address or dispose of abstract questions or issues that might arise in a hypothetical or fictitious situation or setting.
4. **Moot Question: Appeal and Error.** An appellate court may choose to review an otherwise moot case under the public interest exception if it involves a matter affecting the public interest or when other rights or liabilities may be affected by its determination. This exception requires a consideration of the public or private nature of the question presented, the desirability of an authoritative adjudication for future guidance of public officials, and the likelihood of future recurrence of the same or a similar problem.

Donald G. Blankenau, Kevin Griess, and, on brief, Jaron J. Bromm, of Blackwell, Sanders, Peper, Martin, L.L.P., Lincoln, for appellants.  
Stephen D. Mossman, of Mattson, Ricketts, Davies, Stewart & Calkins, Lincoln, for appellee Loren W. Koch.  
Jon Bruning, Attorney General, and Justin D. Lavene for appellee Department of Natural Resources.

HEAVICAN, C.J., WRIGHT, CONNOLLY, GERRARD, STEPHAN, McCORMACK, and MILLER-LERMAN, JJ.

PER CURIAM.

Ronald E. Aupperle and Mary Ann Aupperle appeal from an order of the director of the Department of Natural Resources (DNR) determining that they lacked standing to object to two applications filed by Loren W. Koch. One application sought approval of Koch's plans to construct a dam on an unnamed tributary that runs through properties owned by Koch and the Aupperles, and the other sought a permit to impound 50.5 acre-feet of water from the tributary via the dam. We conclude that the appeal is moot.

## Report of the

### BACKGROUND

The Aupperles and Koch own adjoining real property in Cass County, Nebraska. An unnamed tributary of Weeping Water Creek runs through the Aupperles' land in a northerly direction and enters onto land owned by Koch. The Aupperles are thus upstream users of the tributary, and Koch is a downstream user.

In 1989, Koch constructed a dam on the tributary and impounded approximately 50.5 acre-feet of water. The dam was constructed without obtaining the required dam safety and storage permits from the DNR. In 2005, the Aupperles, in cooperation with the Lower Platte South Natural Resources District (LPSNRD), commenced construction of a small, low-hazard dam to also impound water from the tributary. Because of its size, the dam was exempt from the DNR permitting requirements.FN1

FN1. See Neb.Rev.Stat. §§ 46-1601 to 46-1670 and 46-241(2) (Cum.Supp.2006).

In June 2005, Koch filed an action in the district court for Cass County seeking to enjoin the Aupperles from constructing their dam, which at the time was approximately 80-percent complete. The district court subsequently enjoined the Aupperles from constructing the dam unless it contained a drawdown or similar device that would allow water to flow through to Koch's property. The Aupperles appealed, and we reversed the judgment of the district court in an opinion filed today.FN2

FN2. See Koch v. Aupperle, 274 Neb. 52, 737 N.W.2d 869 (2007).

On September 7, 2005, Koch filed two applications with the DNR. Application No. A-18333 sought a permit to allow the impoundment of 50.5 acre-feet of water for livestock purposes. Application No. P-16637 sought approval of the design and construction of his existing dam. The Aupperles and LPSNRD both filed written objections to the applications. Koch moved to strike the objections, and the director ruled in Koch's favor, finding that the Aupperles and LPSNRD lacked standing to object. In its order, the DNR noted that the processing of the applications would continue because "[s]talling the Application[s] simply defeats the intent of the Safety of Dams and Reservoirs Act." The DNR concluded: "As no objections remain on the record, the Applications will be processed with information from the Applications and the [DNR's] investigation, without hearing."

The Aupperles filed this timely appeal, which we moved to our docket pursuant to our statutory authority to regulate the caseloads of the appellate courts of this state. FN3 LPSNRD is not a party to the appeal. The DNR is a named party but did not file a brief after its motion for summary dismissal was overruled without prejudice.

FN3. See Neb.Rev.Stat. § 24-1106(3) (Reissue 1995).

On the day of oral argument in this court, Koch filed a motion to dismiss the appeal, accompanied by a copy of an order entered by the DNR on the previous day which approved both of Koch's applications. Oral argument proceeded as scheduled, but we granted both parties

## Department of Natural Resources

leave to submit additional briefs on the issue of mootness. In their mootness brief, the Aupperles concede that the DNR has granted Koch's applications. They argue, however, that the appeal is not moot and that even if it is, it should nevertheless be decided on the merits under the public interest exception to the mootness doctrine.

### ANALYSIS

#### Is Appeal Moot?

A case becomes moot when the issues initially presented in the litigation cease to exist, when the litigants lack a legally cognizable interest in the outcome of litigation, or when the litigants seek to determine a question which does not rest upon existing facts or rights, in which the issues presented are no longer alive.<sup>FN4</sup> The issue originally presented in this appeal was whether the Aupperles had standing to object to Koch's permit applications based upon their status as upstream landowners and the provisions of § 46-241(2), under which an on-channel reservoir with a water storage impounding capacity of less than 15-acre feet is exempted from DNR permit requirements. We conclude that this case is moot. Our resolution of the standing issue would have no impact on the DNR's consideration of Koch's applications, as that administrative proceeding has been concluded.

FN4. *Swoboda v. Volkman Plumbing*, 269 Neb. 20, 690 N.W.2d 166 (2004); *In re Application No. C-1889*, 264 Neb. 167, 647 N.W.2d 45 (2002).

The Aupperles argue that “[t]he question on appeal ultimately concerns the extent of DNR's regulatory authority over the owners of certain small ponds.”<sup>FN5</sup> But the DNR has not sought in this action to exercise any regulatory authority over the Aupperles. Thus, any determination of the respective water rights of the Aupperles and Koch would constitute nothing more than an advisory opinion, as there is no case and controversy regarding such rights. In the absence of an actual case or controversy requiring judicial resolution, it is not the function of the courts to render a judgment that is merely advisory.<sup>FN6</sup> A court decides real controversies and determines rights actually controverted, and does not address or dispose of abstract questions or issues that might arise in a hypothetical or fictitious situation or setting. <sup>FN7</sup>

FN5. Brief for appellant in opposition to motion for summary dismissal at 4.

FN6. *Wilcox v. City of McCook*, 262 Neb. 696, 634 N.W.2d 486 (2001); *Keller v. Tavarone*, 262 Neb. 2, 628 N.W.2d 222 (2001).

FN7. *Wood v. Wood*, 266 Neb. 580, 667 N.W.2d 235 (2003); *In re Estate of Reading*, 261 Neb. 897, 626 N.W.2d 595 (2001).

#### Does Public Interest Exception Apply?

The Aupperles argue that if we determine the appeal is moot, we should nevertheless decide the issues presented under the public interest exception to the mootness doctrine. An appellate court may choose to review an otherwise moot case under the public interest exception if it involves a

#### **Report of the**

matter affecting the public interest or when other rights or liabilities may be affected by its determination.FN8 This exception requires a consideration of the public or private nature of the question presented, the desirability of an authoritative adjudication for future guidance of public officials, and the likelihood of future recurrence of the same or a similar problem.FN9

FN8. *Davis v. Settle*, 266 Neb. 232, 665 N.W.2d 6 (2003); *Chambers v. Lautenbaugh*, 263 Neb. 920, 644 N.W.2d 540 (2002).

FN9. *Id.*

At its core, this is a dispute between two private landowners regarding potential future rights to store water flowing in a watercourse which transverses their properties. The facts which would frame the resolution of this dispute have not yet occurred. Because we find the necessary considerations to be lacking, we decline to reach the merits of this moot appeal under the public interest exception.

#### **CONCLUSION**

For the reasons discussed, we conclude that the issue presented in this appeal is moot, and we decline to reach it under the public interest exception to the mootness doctrine. Accordingly, we dismiss the appeal.

Appeal dismissed.

Statistics

Department of Natural Resources

STATISTICAL SUMMARY

The following is a summary of statistical data for the biennium ending December 31, 2006:

Applications for new surface water permits .....	170
Modification of surface water rights .....	158
Applications dismissed.....	27
Adjudication hearings .....	0
Miscellaneous hearings .....	6
Appropriations cancelled.....	29
Appropriations cancelled in part .....	29
Applications for ground water permits.....	48
Industrial transfer notices filed.....	0
Wells registered during biennium .....	15,512
Wells registered through December 31, 2006 .....	173,085
Modifications to ground water well registrations.....	14,263
Management area permits received .....	4,148
Change of ownerships.....	11,134
Conduct water in a stream applications filed .....	4
Reports of field investigations.....	127
Reports of dam inspections .....	886
Maps and plans examined .....	443
Inventory-sized dams in Nebraska .....	2,227
Canal gages, continuous recording.....	122
Stream gages, seasonal and full-time .....	199
Reservoir gages, recording.....	21
Reservoir gages, non-recording.....	2
FY 2005-2006 Fees Collected:	
Surfacewater (SW) .....	\$13,383.21
Well Registrations – Department of Natural Resources (DNR) Cash Fund.....	\$231,937.50
Well Registrations – Well Water Decommissioning Fund (WWDF).....	\$269,492.50
Health & Human Services (HHS) .....	\$496,800.00
Groundwater (GW) .....	\$9,442.50
Survey Fees .....	\$50,092.17
Data Bank Fees .....	\$2,797.70
Copies.....	\$1,416.03

**Geographic Areas Determined to Have Surface Water Hydrologically Connected to Ground Water for the Purpose of Fully Appropriated or Overappropriated Designations**  
 Determinations made by the Department of Natural Resources as of May 1, 2006

This map represents an effort to identify areas that are hydrologically connected to groundwater for the purpose of fully appropriated or overappropriated designations. It is not intended to be used for any other purpose. The Department of Natural Resources (DNR) is not responsible for any errors or omissions in this map. Department of Natural Resources

## Report of the

### WATER DIVISIONS

The State of Nebraska is divided in two water divisions by statute, denominated Water Division No. 1 and Water Division No. 2, respectively. Water Division No. 1 consists of all the lands of the state drained by the Platte Rivers and their tributaries lying west of the mouth of the Loup River; and also all other lands lying south of the Platte and South Platte Rivers that may be watered from other superficial or subterranean streams not tributary to the Platte River. Water Division No. 2 consists of all lands that may be watered from the Loup, White, Niobrara and Elkhorn Rivers, and Hat Creek and their tributaries, and those lands drained by the Platte River and its tributaries lying east of the mouth of the Loup River.

For convenience in the administration of the surface water laws and the distribution of water, the two water divisions have been subdivided into 12 water divisions, denominated 1-A, Platte River basin; 1-B, Republican River basin; 1-C, Little Blue River basin; 1-D, Big Blue River Basin; 1-E, Lodgepole Creek basin; 1-F, Nemaha River and Salt Creek basins; 2-C, Niobrara River basin; 2-D, White River and White Clay Creek basins; 2-E, Hat Creek basin; and 2-F, Upper Missouri River and Tributary basins, as shown on the preceding page.

### CLAIMS AND APPLICATIONS

The following tables give a complete list of all current surface water appropriations of record in the Department of Natural Resources. This list also includes pending applications which have not yet been approved. The current surface water appropriations listing is followed by tables listing water appropriations which have been cancelled in full or in part, or have been dismissed, during the past two years.

The appropriations have been arranged within each water division in downstream order by the location of their point of diversion, and then in order of priority for multiple appropriations with a common point of diversion. Appropriations which have sources of supply that are not directly tributary on the surface to the main stream are listed at the first part of each water division.

Appropriations having docket numbers (D-) refer to claims covering rights which were acquired under the law prior to April 4, 1895, or those on the Missouri River covered by the law passed in 1980; and those having application numbers (A-) were filed to appropriate water under the law of 1895.

There is only one appropriator listed for each entry. However, certain appropriations may have more than one appropriator of record. More detailed information on the appropriator(s) of record is available from the Department.

Definitions for abbreviations in the "use" and "Footnotes" columns are listed on pages 662-663.

### **Department of Natural Resources**

The grant is listed in cubic feet per second (cfs) unless it is designated as acre-feet (af). Basically, storage rights are granted in acre-feet, diversions from streams are granted in cubic feet per second. Nebraska law does not allow the Department to limit the rate at which water may be diverted from or into storage. Diversions from streams are limited by statute to a maximum of one cubic foot per second for every seventy acres of land. In the tables concerning current water rights, the grant listed is the amount in effect at the time of this publication. In the tables concerning cancelled and dismissed water rights, the grant listed is the amount that has been cancelled.

The "annotation" column lists petition numbers or appropriation numbers also associated with the appropriation.

Department of Natural Resources

**DEFINITIONS OF ABBREVIATION IN “USE” COLUMN**

- “IR” Irrigation from Natural Stream
- “ST” Storage
- “MF” Manufacturing
- “DO” Domestic
- “SO” Stor-only (irrigation from a reservoir on lands not covered by a natural flow appropriation)
- “SI” Supplemental Irrigation (irrig. from reservoir on lands also covered by a natural flow appropriation)
- “FC” Fish Culture
- “SS” Supplemental Storage (an appropriation that has a prior appropriation for storage)
- “IS” Irrigation and Storage (an appropriation which was approved for both uses)
- “PS” Supplemental Power and Incidental Underground Storage
- “PR” Power
- “CO” Cooling
- “RD” Raise Dam
- “DG” Dredge
- “PI” Power and Incidental Underground Storage
- “SP” Supplemental Power (an app. for water for power through a system that has a prior app. for power)
- “ML” Maintain Level of a Lake
- “SC” Supplemental Cooling (an app. for water for cooling through a system that has a prior app. for cooling)
- “US” Incidental Underground Storage
- “SU” Storage and Incidental Underground Storage
- “IU” Irrigation and Incidental Underground Storage
- “UI” Supplemental Irrigation and Incidental Underground Storage
- “FW” Fish and wildlife
- “GW” Groundwater Recharge
- “IF” Instream Flow
- “OU” Stor-only and Incidental Underground Storage
- “SF” Supplemental Fish Culture
- “IN” Intentional Underground Storage
- “SD” Supplemental Domestic
- “IG” Induced Ground Water Recharge

**DEFINITIONS OF ABBREVIATION IN "USE" COLUMN**

- "WT" Wetlands
- "WS" Waste Storage
- "FL" Flood Control
- "MU" Municipal
- "PW" Public Water Supply
- "DI" Domestic Irrigation and Manufacturing
- "SR" Storage use within a reservoir.
- "WF" Wildlife and Flood Control

**FOOTNOTES FOR "SURFACE WATER RIGHTS DATA"**

<b><u>ID</u></b>	<b><u>FOOTNOTE CODE</u></b>	<b><u>FOOTNOTE EXPLANATION</u></b>
1.	A	Supplemental storage based on increase in size of reservoir capacity or increase in amount of water diverted into reservoir.
2.	B	Supplemental storage from different source; total grant in acre-feet not to exceed first appropriation.
3.	C	Supplemental storage from different source; total grant is sum of two appropriations.
4.	D	This appropriation is additional water for a prior appropriation.
5.	E	The sources of these appropriations do not drain on the surface into the main stream of a water division, but often into lakes of the Sandhills or other lakes, bogs, etc.
6.	F	Designates beginning of separate basins in 2-F.
7.	G	Amount affirmed by U.S. Supreme Court: 29 cfs for Nebraska and 15 cfs for Colorado.
8.	H	The rate and grant specified in the permit are inconsistent.
9.	I	Provides for optional diversion.
10.	J	Dismissed or denied.
11.	K	Cancelled in Part.
12.	L	Cancelled in Full.
13.	M	Less amount diverted under A-2293.
14.	N	Less any amounts diverted under other appropriation so that total amount diverted at any time shall not exceed statutory limit of one cfs for 70 acres.
15.	O	Supplemental storage from same source. Total grant is sum of appropriation.
16.	P	Total diversion under A-1853R, A-1976R, and A-2726R at the Tri-County Canal headgate is limited to 25 cfs.
17.	Q	The natural flow together with supplemental storage water shall not exceed 1500 second-feet as a rate of diversion
18.	R	Combined diversion for cooling at Gerald Gentlemen units No. 1 and No. 2 is limited to 1720 cfs from all sources.
19.	S	Adds lands but does not increase appropriation of original filing.
20.	T	By stipulation, the Loup River Public Power District is subsequent in priority to A-2293 filed by the Middle Loup Public Power and Irrigation District and A-2312 filed by the North Loup Public Power and Irrigation District.
21.	U	Total allocation from Middle Loup River and Oak Creek under A-4923A and A-4923B is 68,120 acre-feet.
22.	V	This amount less any amounts diverted under A-2312.

**FOOTNOTES FOR "SURFACE WATER RIGHTS DATA"**

<b><u>ID</u></b>	<b><u>FOOTNOTE CODE</u></b>	<b><u>FOOTNOTE EXPLANATION</u></b>
23.	W	Transbasin diversion.
24.	X	Glendo contractor.
25.	Y	Combined gallons per day is 7,500,000.
26.	Z	Additional withdrawal of ground water from previously approved well field.
27.	^	This appropriation shall not be administered for either appropriation D-274, D-275.
28.	*	Pending.
29.	#	This appropriation is the first appropriation from a gage.
30.	@	Temporary permit.
31.	+	The following appropriations will not be regulated for D-1026R---A-8266, A-16114, A-16115, A-17064 (P-473), and A-17110.
32.	%	This appropriation shall not be administered for either appropriation A-2293BR, P-468 or A-3979BR, P-468.
33.	<	Less any amount withdrawn under A-10481.
34.	>	Not subject to administration due to case law.
35.	&	Headwater pit exempt from administration.
36.	\$	Appropriation A-1220 shall not be administered for A-186R (T-238) or A-937A, A-937B and A-937C.
37.	(	Shall be limited to flows of Spring Creek for purposes of administration.
38.	}	Shall not cause any appropriation to be administered which would not have been administered prior to relocation.
39.	1	Central Platte NRD's Platte River instream flow appropriations are limited as follows: (See Chart 1).
40.	2	Game and Parks Commission's Platte River instream flow appropriations are limited as follows: (See Chart 2).
41.	3	Reference appropriation file for volume limitations and accounting procedures.
42.	{	Combined usage under A-17825, A-17826 and A-17827 shall not exceed a total of 105.2 acre-feet.
43.	¬	This appropriation shall not be administered for either appropriation D-274, D-275.
44.	?	Lake level maintained by ground water well(s).
45.	4.	Reference appropriation file for rate limitations and administration procedures.
46.		
47.	5	This appropriation has a power lease.
48.	6	This appropriation has a drawdown waiver.

FOOTNOTES FOR "PERMITS TO CONDUCT WATER IN A STREAM"

FOOTNOTE #

FOOTNOTE EXPLANATION

CFS =	Cubic Feet Per Second
1	Department will compute transportation losses as required.
2	Water withdrawn at this location from Nine Mile Creek and replaced from Minatare Drain into Nine Mile Creek in Section 10, Township 21 North, Range 53 West. This permit was amended January 8, 1996.
3	Administration will be based on the number of those acres covered under this permit that are actually being irrigated, the rate of diversion specified for each natural flow appropriation, and whether storage water is available in the Dawson County Canal system.
4	Pending
5	Water withdrawn at this location from the ground water well will be conveyed to Strever (Spring) Creek where it will be discharged in the SE¼SE¼ of Section 10, Township 10 North, Range 22 West.
6	Measuring device required.
7	Temporary permit approval, 2002 season only.
8	This permit was amended November 21, 2003 to indicate that all four wells will have a separate pipeline to creek.
9	Permit may only be utilized during May through September.
10	This permit will have a primary and secondary point of discharge. The secondary "back-up" point of discharge will release water from Interstate Canal into Sheep Creek in the NE¼NE¼ of Section 15, Township 25 North, Range 60 West, in Goshen County, Wyoming, and will be used only if the District should encounter capacity problems in replacing water through the District's lateral.
11	Temporary permit approval, 2003 season only.
12	Permit may only be utilized April 1 through October 1 of each year.
13	Water will be diverted into the Gering-Ft. Laramie Canal and be released from a lateral in the SE¼SE¼ of Section 25, Township 21 North, Range 56 West, into the Gering Drain in the NW¼NE¼ of Section 19, Township 21 North, Range 55 West, where it will be carried in the drain downstream to a pump site located in the NE¼NE¼ of this same section, and where it will be withdrawn for irrigation.
14	Water will be diverted into the Gering-Ft. Laramie Canal and be released from a lateral in the SW¼NW¼ of Section 7, Township 21 North, Range 55 West, into the Gering Drain in the NW¼NE¼ of Section 21, Township 21 North, Range 55 West, where it will be carried in the drain downstream to a pump site located in the NW¼NE¼ of this same section, and where it will be withdrawn for irrigation.
15	Well is owned by David and Robert R Maly.
16	Permit may only be utilized during June through August.
17	Permit may only be utilized from June through September 30, 2004.

**FOOTNOTES FOR "PERMITS TO CONDUCT WATER IN A STREAM"**

**FOOTNOTE #**

**FOOTNOTE EXPLANATION**

- 18 Permit may only be utilized April through October of each year.
- 19 Department must be contacted each year prior to pumping to report the initial use date.
- 20 C-77 will replace C-12.
- 21 Permit may only be utilized during April through September of each year.
- 22 Annual water use report required.
- 23 The rate of water withdrawn from Center Creek shall not exceed the maximum pumping rate of the well minus transit losses.
