State of Nebraska

VICTOR E. ANDERSON, GOVERNOR
LINCOLN 9

IN REPLY REFER TO

November 30, 1956

The Honorable Victor E. Anderson
Governor of the State of Nebraska

Sir:

In accordance with the Statutes, I am transmitting to you herewith Volume II of the Thirty-first Biennial Report of the Department of Roads and Irrigation for the water years 1955 and 1956.

Volume II contains data regarding the water supply of the State; a list of water appropriations of record on September 30, 1956; districts organized under various laws; and a summary of the activities of the Bureau of Irrigation, Water Power and Drainage. This report also contains pertinent Court Decisions rendered during this biennium.

Volume I contains detailed reports of the Bureau of Highways, the Motor Vehicle Division, and the Law Enforcement and Public Safety Division.

Respectfully submitted,

L. N. Ress
State Engineer

THIRTY-FIRST BIENNIAL REPORT

OF THE

**DEPARTMENT OF ROADS
AND IRRIGATION**

VOLUME II

**BUREAU OF IRRIGATION
WATER POWER AND DRAINAGE**

TO

**HONORABLE VICTOR E. ANDERSON
GOVERNOR OF THE STATE OF NEBRASKA**

LINCOLN, NEBRASKA

1955-1956

**EXECUTIVES AND EMPLOYEES
OF THE
BUREAU OF IRRIGATION, WATER POWER AND DRAINAGE**

L. N. Ress, State Engineer	Lincoln
Dan S. Jones, Jr., Chief	Lincoln
F. H. Klietsch, Division Engineer	Bridgeport
Edwin S. Kimmel, Hydraulic Engineer	Bridgeport
K. I. Ward, Special Assistant	Lincoln
Marion E. Ball, Hydrologist	Lincoln
David B. Ender, Senior Hydrographer	North Platte
Robert F. Bishop, Associate Hydrographer	Bridgeport
C. D. Christensen, Associate Hydrographer	Bridgeport
S. M. Christensen, Associate Hydrographer	Bridgeport
John H. Hintz, Associate Hydrographer	Hershey
David J. Neely, Associate Hydrographer II	Bridgeport
Willard J. Page, Associate Hydrographer	Grand Island
Nick Panas, Associate Hydrographer I	Bridgeport
Lloyd E. Powell, Jr., Associate Hydrographer	Bridgeport
Leo F. Zabel, Associate Hydrographer	Cambridge
Janis Stakens, Engineer Aide	Lincoln
Thelma Pangle, Typist-Clerk	Lincoln
Elizabeth Fairfield, Typist-Clerk	Lincoln
Bernadine Gocke, Secretary-Clerk	Lincoln
Beverly Phillips, Secretary-Clerk	Lincoln
Eileen Thompson, Typist-Clerk	Bridgeport
Dorothy Brening, Typist-Clerk	Bridgeport

WATER SUPPLY

The runoff of the North Platte River above the Pathfinder Dam was 580,000 acre-feet during the 1955 water year and 868,000 acre-feet during the 1956 water year, or 57 percent and 85 percent, respectively, of a twenty-year (1933-1952) average. Although 288,000 acre-feet more water ran off in 1956 than in 1955, it is noteworthy that the amount of water stored under the Pathfinder Reservoir appropriation was the same in both years, 478,000 acre-feet. This was due largely to the fact that in 1956 the precipitation on the watershed below the dam was extremely deficient, resulting in little runoff, and to the heavier than average demand for water on the project during the period of peak runoff from the snow melt.

The discharge of the North Platte River below the Tri-State Dam for the period May 1 to September 30, 1955, was 26,910 acre-feet and it was 8,480 acre-feet for the same period in 1956, which is about 53 percent for 1955 and about 17 percent for 1956 of the ten year (1941-1951) average. This shows that the natural flow supply coming out of Wyoming was abnormally low both years. However, the canals diverting from the river between the Tri-State Dam and Bridgeport, using natural flow only, did have sufficient water to provide for normal crop production. In this section of the river irrigators depend primarily upon return flow to the section. The amount passing the Tri-State Dam affects mostly the supply for diversions east of Bridgeport and for storage in the Kingsley Reservoir.

The amount of annual flow in the river at Lewellen, at the upper end of Kingsley Reservoir, has a material effect upon storage in the Kingsley Reservoir and the natural flow available for the diversions from the North Platte and Platte Rivers as far east as Kearney. Because of two major year round power diversions in this section, the year round flow at Lewellen is of major importance when comparing one with another or any one year with the average of a period of years, and when determining whether or not the water supply was abnormally low during any particular year.

The average annual flow at Lewellen was 1,126,360 acre-feet for the period 1942 to 1951, inclusive. The annual flow for 1955 was 641,000 acre-feet, and for 1956 was 597,650 acre-feet or 56 percent and 53 percent, respectively, of the ten year (1942-1951) average. The annual flow during each of the years represented during the ten year period exceeded one million acre-feet, except in 1946 when it was 995,480 acre-feet. This comparison shows why the storage in Kingsley Reservoir has diminished so rapidly during

this biennium and why the natural flow supply downstream was very low, thus requiring a greater use of storage than normal.

The annual discharge of the Platte River at Odessa, which is below all diversions, for 1955 was 466,900 acre-feet and for 1956 was 327,100 acre-feet or 82 percent and 58 percent, respectively, of the ten year (1942-1951) average.

The foregoing analysis shows that this biennium was exceptionally dry and explains why there was a very low natural flow water supply for the period. Precipitation figures for this period given elsewhere in this report verify this conclusion.

The runoff of the Republican River near Stratton, above Swanston Lake, was 87,000 acre-feet in 1955 and 69,000 acre-feet in 1956, approximately 73 percent and 58 percent, respectively, of the 1943-1954 average. The runoff of the Frenchman River above the Enders Reservoir was 51,400 acre-feet in 1955 and 49,200 acre-feet in 1956, 96 percent and 92 percent, respectively, of the 1943-1954 average.

Medicine Creek at Cambridge, adjusted for storage, discharged 38,300 acre-feet in 1955 and 35,900 acre-feet in 1956, 63 percent and 59 percent, respectively, of the 1943-1954 average. The adjusted flow of the Republican River at Bloomington was 163,000 acre-feet in 1955 and 108,000 acre-feet in 1956, 31 percent and 21 percent, respectively, of the 1943-1954 average of 519,400 acre-feet.

Although the below normal runoff, which has persisted since 1951, continued through the two years of this biennium, there was ample water stored in the basin's reservoirs to supply the requirements of irrigators in the partially developed Frenchman-Cambridge and Bostwick Irrigation Districts. In addition, many individual appropriators used storage water from the reservoirs under temporary Warren Act contracts to relieve their natural flow shortages.

The runoff of the Loup River and its tributaries during the biennium, in general, was closer to normal than most other streams in the State. The flow of the North Loup River at Taylor was 320,000 acre-feet in 1955 and 318,000 acre-feet in 1956, 96 percent and 95 percent, respectively, of the 1943-1954 average. The discharge of the Middle Loup River at Arcadia was 546,000 acre-feet in 1955 and 565,700 acre-feet in 1956, 93 percent and 96 percent, respectively, of the 1943-1954 average.

One extreme example of deviation from normal in the Loup Basin was Mud Beaver Creek at Sweetwater where the runoff in 1955 was only 13,500 acre-feet, 33 percent of the 1947-1954 average. Shell Creek near Columbus had a discharge of only 12,800 acre-feet in 1955, 33 percent of the 1948-1954 average.

The runoff of the Big Blue River at Barnston was 248,000 acre-feet in 1955 and 223,600 acre-feet in 1956, 32 percent and 29 percent, respectively, of the 1943-1954 average of 782,000 acre-feet.

The flow of the Niobrara River above Dunlap followed the sub-normal trend of most of the other streams of the state. The inflow to Box Butte Reservoir was 18,200 acre-feet in 1955 and 18,840 acre-feet in 1956, 69 percent and 71 percent, respectively, of the 1946-1954 average of 26,600 acre-feet. The Mirage Flats Irrigation District suffered shortages of some consequence during both years and some of the district water users installed irrigation wells during 1956 to supplement the supply from the river.

RESERVOIRS

The Pathfinder Reservoir, located in Wyoming on the North Platte River, stores water for use on lands situated on both sides of the river in eastern Wyoming and in the panhandle area of Nebraska. The capacity of the reservoir is now 1,016,000 acre-feet. The carryover was 47,900 acre-feet on September 30, 1955, and 10,600 acre-feet on September 30, 1956. There were approximately 481,000 acre-feet of storage water available during the 1955 season and 526,000 acre-feet during the 1956 season. The record low for storage water available during the past 40 years occurred in 1940 when there were 329,000 acre-feet available.

The Guernsey Reservoir serves as a regulator for Pathfinder storage water enroute to project lands and as a power head for the operation of a hydroelectric plant at Guernsey Dam. The capacity at the time it was constructed in 1928 was 72,700 acre-feet. However, due to silting, the capacity has been reduced to about 44,000 acre-feet.

Under Application 2374, The Central Nebraska Public Power and Irrigation District has the right to impound 2,000,000 acre-feet of water in Lake C. W. McConaughy (Kingsley Reservoir) on the North Platte River located about seven miles north of Ogallala. The inflow to the reservoir during the 1955 water year was 699,340 acre-feet of which 213,500 acre-feet were intercepted and stored. Approximately 533,640 acre-feet of storage water were withdrawn through the dam during the season and the carryover on September 30, 1955, was 736,200 acre-feet. The inflow during the 1956 water year was 650,140 acre-feet of which 190,440 acre-feet were intercepted and stored. Approximately 546,770 acre-feet of storage water were withdrawn through the dam during the season and the carryover on September 30, 1956, was 418,400 acre-feet. The foregoing figures clearly indicate what can happen to a reservoir at the end of four successive dry years, (1953-1956). The amount intercepted for storage during 1956 and the amount carried over on September 30, 1956, were the lowest since the reservoir has

been operated (15 years). If 1957 is as dry as the succeeding four years, all available storage may be exhausted by September 30th, 1957, if not sooner.

The Sutherland Reservoir is located about three miles south of Sutherland. It obtains its water supply from the North Platte River near Keystone by virtue of Applications 2350 and 2361, issued to the Platte Valley Public Power and Irrigation District. It was originally constructed for a storage reservoir. However, because of seepage a large part of its appropriation has been transferred to Kingsley Reservoir. It now serves primarily as a regulator having a limited capacity of about 70,000 acre-feet. Diversions from the South Platte River by virtue of Application 3601 are for power only. Because of the foregoing conditions, the Department during the irrigation season in computing Sutherland storage releases treats the Sutherland Reservoir as a regulator only. No analyses for its operation are made and, therefore, no figures are given pertaining to its operation.

Crescent Lake is in the sandhill region about twenty-five miles north of Oshkosh near the headwaters of Blue Creek. The water in Crescent Lake, on a limited basis, is used to supplement the natural flow in Blue Creek by virtue of Application 1575. The maximum amount of water permissible to use out of the lake is controlled by the concrete floor in the outlet headgate. During the season of 1955, 463 acre-feet from the lake were used for irrigation. No lake water was used for irrigation during the 1956 water year. Because the available supply was very small in 1956, the interested parties did not consider it economically worthwhile to use it.

Harry Strunk Lake is an on-stream reservoir built to impound the natural flow of Medicine Creek. It was constructed by the United States Bureau of Reclamation by virtue of storage Application 3900 and has a capacity of 39,200 acre-feet at the top of the irrigation pool. The capacity at the top of the flood control pool is 91,000 acre-feet. It is located about eight miles northwest of Cambridge. The carryover on September 30, 1955, was 15,080 acre-feet and during the 1955 water year about 23,500 acre-feet were impounded and about 30,660 acre-feet were withdrawn. The carryover on September 30, 1956, was 20,440 acre-feet and during the 1956 water year about 22,000 acre-feet were impounded and about 16,500 acre-feet were withdrawn.

Water for the irrigation of lands in the Bostwick Irrigation Districts in Kansas and Nebraska is stored in the Harlan County Reservoir under Application 4190 which was filed by the U. S. Bureau of Reclamation. The multiple purpose reservoir, completed by the U. S. Army Corps of Engineers in 1952, has a total capacity of 850,000 acre-feet, including flood control, with the capacity at the top of the irrigation pool being 350,000 acre-feet.

Swanson Lake is a reservoir on the Republican River about three miles west of Trenton. Water is stored in it under Application 4884 a permit issued to the United States Bureau of Reclamation, and has a total capacity of 254,000 acre-feet, the capacity at the top of the irrigation pool being 122,800 acre-feet. Water was first stored in this reservoir on November 1, 1953. The carryover on September 30, 1955, was 41,980 acre-feet. During the 1955 water year approximately 58,000 acre-feet were impounded and 36,000 acre-feet were withdrawn. The carryover on September 30, 1956, was 63,000 acre-feet. During the water year 1956 approximately 43,700 acre-feet were impounded and 21,500 acre-feet were withdrawn.

The Enders Reservoir is on the Frenchman River about eight miles southeast of Imperial. Water is stored in it by virtue of Application 3899 granted to the United States Bureau of Reclamation. The total capacity is 74,500 acre-feet, with the capacity at the top of the irrigation pool being 44,500 acre-feet. The carryover on September 30, 1955, was 34,280 acre-feet. During the 1955 water year 16,100 acre-feet were impounded and 13,000 acre-feet were withdrawn. The carryover on September 30, 1956, was 34,210 acre-feet. During the 1956 water year 14,400 acre-feet were impounded and 14,400 acre-feet were withdrawn.

The Box Butte Reservoir is on the Niobrara River about nine miles north of Hemingford and stores water by virtue of Applications 2709a and 3456 granted to the United States Bureau of Reclamation. It has a capacity of 32,000 acre-feet. The carryover on September 30, 1955, was 5,600 acre-feet. During the 1955 water year 15,510 acre-feet were impounded and 16,740 acre-feet were withdrawn. Carryover on September 30, 1956, was 4,000 acre-feet. During the water year 1956 about 16,050 acre-feet were impounded and 17,650 acre-feet were withdrawn.

The Oliver Reservoir is on Lodgepole Creek about eight miles west of Kimball and can store water by virtue of Application 897 issued to the Kimball Irrigation District. It has a capacity of approximately 18,000 acre-feet. Carryover on September 30, 1955, was 2,670 acre-feet. During the 1955 water year 4,200 acre-feet were impounded and 3,720 acre-feet were withdrawn. Carryover on September 30, 1956, was 1,260 acre-feet. During the 1956 water year 2,030 acre-feet were impounded and 3,440 acre-feet withdrawn.

The Bennett Reservoir is located on Lodgepole Creek about three miles northeast of Kimball and stores water by virtue of Applications 657 and 1974. This reservoir is owned and operated by an individual and has a capacity of about 962 acre-feet. Carryover on September 30, 1955, was 435 acre-feet. During the 1955 water year 720 acre-feet were impounded and 910 acre-feet were withdrawn. Carryover on September 30, 1956, was about 140 acre-

feet. During the 1956 water year 710 acre-feet were impounded and 1,440 acre-feet withdrawn.

The Whitney Reservoir is an off-stream reservoir located about twenty-five miles west of Whitney and water is diverted to it from White River by virtue of Application 1603. It has a capacity of about 10,000 acre-feet and is owned and operated by the Whitney Irrigation District. The carryover on September 30, 1955, was 3,100 acre-feet. During the 1955 water year 9,200 acre-feet were impounded and 6,800 acre-feet were withdrawn. The carryover on September 30, 1956, was 1,680 acre-feet. During the 1956 water year 6,800 acre-feet were impounded and 8,200 acre-feet were withdrawn.

The following table shows the amounts of water in storage in reservoirs during the biennium.

**COMPARISON OF STORAGE
IN RESERVOIRS**

Name of Reservoir	Capacity at Top of Irrig. Pool Acre-feet	Maximum Storage				Carry Over Storage			
		1955		1956		Sept. 30, 1955		Sept. 30, 1956	
		Ac. Ft.	% Avg.	Ac. Ft.	% Avg.	Ac. Ft.	% Avg.	Ac. Ft.	% Avg.
Pathfinder	1 1,016,000	481,000	47	526,000	52	47,900	14	10,600	3
Lake C. W. McConaughy	2 2,000,000	1,234,600	89	923,400	67	736,200	68	415,600	38
Sutherland	2 140,000	61,797	87	57,590	81	39,576	81	15,600	32
Oliver	2 18,000	4,720	100	4,700	100	2,670	178	1,260	84
Bennett	3 962	1,170	103	1,145	101	435	89	140	29
Whitney	2 10,000	9,840	107	9,900	108	3,100	70	1,680	37
Crescent Lake	3 7,000	1,620	31	-----	-----	400	15	-----	-----
Box Butte	4 31,075	20,940	78	21,650	80	5,600	45	4,000	32
Enders	5 44,480	44,480	108	44,480	108	34,280	108	34,210	108
Harry Strunk Lake	5 39,230	39,230	102	34,960	90	15,080	57	20,440	77

WATER ADMINISTRATION

The 1955 irrigation season in most respects was similar to the 1954 season in the Platte River Basin. Both were unusually dry resulting in a short natural flow supply and below normal rainfall.

That section of the North Platte River above the Tri-State Dam, considered the State Line for administrative purposes, is administered separately and without regard to any rights in the Platte River Basin below the Tri-State Dam. The Tri-State Dam is the diversion dam on the North Platte River for the Farmers Irrigation District, served by the Tri-State Canal. It is located about one mile east of the Wyoming-Nebraska State Line.

This method of administration has been in effect since October 1945 when the U. S. Supreme Court handed down the decree allocating the natural flow of the North Platte River Basin from its headquarters in Colorado through Wyoming downstream to the Tri-State Dam. The decree did not deal with the administration of storage water nor did it require any natural flow to pass the Tri-State Dam. Therefore, no appropriators below the Tri-State Dam have a claim on natural flow developing above the dam, regardless of their priority.

In the section of the river between Whalen, Wyoming, and the Tri-State Dam, eight canals divert water for use on Nebraska lands. The Gering-Fort Laramie, Interstate, and Northport Canals are government constructed projects. The other canals, Gering, Mitchell, Tri-state, Ramshorn, and French, were all constructed by private groups. Ramshorn diversions out of Wyoming are limited to 14 second-feet by the Decree. The Gering-Fort Laramie, Interstate, and French Canals are used to irrigate lands in both Wyoming and Nebraska, while the others are used to irrigate only lands in Nebraska. All, except the Mitchell, Ramshorn, and French Canals, have storage rights in the Pathfinder Reservoir in addition to natural flow rights.

During the 1955 season the Mitchell Canal received some storage water from another source than Pathfinder Reservoir. The Ramshorn and French Canals received no storage water. While the French Canal took no water during the season, the Ramshorn managed to get enough natural flow from its two diversions, above and below the Tri-State Dam, to produce good crops. The Department experienced no difficulty in administering the water in this section. While the natural flow was rather scarce, adequate storage water was available to provide normal crop production. Storage water is allocated by the U. S. Bureau of Reclamation and distributed by the Department according to the allocation.

Administration during the 1955 season on the Platte River east of North Platte was normal for an average dry year. Junior projects

having storage rights in this area began using storage water on July 12 and the older rights began its use about July 17. The use of storage water began when the natural flow diminished to a point which necessitated closing all natural flow rights subsequent to June 14, 1894, in the basin from Cozad west to the State Line. Also at this time all natural flow rights subsequent to September 17, 1929, in the basin from Cozad east to Kearney were closed.

On August 25, 1955, all projects on the Platte River east of the Tri-County Diversion Dam except the Dawson County Canal and Kearney Canal were closed to storage water, since they had used their allotment. The storage water is administered by the Department and allocated by the reservoir owners, The Central Nebraska Public Power and Irrigation District for Kingsley and the Platte Valley Public Power and Irrigation District for Sutherland. The closed canals received no more water until September 23 when a limited amount of natural flow became available. On October 1 all canals in the basin were opened to natural flow.

The projects from Kingsley Dam east to North Platte with priorities earlier than June 14, 1894, and having storage water contracts began using storage water on July 15. The three junior canals in this section having storage rights are the Keith-Lincoln County, Paxton-Hershey and Suburban Canals. Because the situation varied considerably between the three, the following separate reports are made.

(1) The Keith-Lincoln County Canal, being senior to the other two, was closed for two days only, August 8 and 9, then opened to natural flow and additional storage purchased, but it was closed again from August 24 until September 13 when natural flow became available.

(2) The Paxton-Hershey Canal was closed from August 5 to 10 when it was opened to natural flow and additional storage purchased until August 23. It remained closed until September 13 when natural flow again became available but on a limited basis.

(3) The Suburban Canal was closed to all water on August 8 and opened for part of its natural flow appropriation on August 11 and it was never completely closed thereafter. This canal is so situated with respect to the mouth of Birdwood Creek that it has an advantage over the other two although it is junior to them.

Because of an increase in natural flow all canals in the North Platte Basin above Lewellen were opened to natural flow on August 13, but those with priorities later than April 12, 1894, were closed again on August 16. On August 26 canals in this section with priorities later than December 6, 1893, were closed but those with priorities as late as April 12, 1894, were opened again on August 29. The water supply was sufficient to open all canals in this area on September 20, 1955, for the remainder of the season.

While the foregoing might have varied slightly from the dates noted, it is given to indicate in a general way the water supply situation during the 1955 season in the Platte River Basin west of Kearney. It is obvious that lands served by canals with priorities junior to June 14, 1894, (Dawson County Canal priority) and without storage rights suffered a considerable loss in production in that area. It is further obvious, that were it not for the Kingsley and Sutherland Reservoirs the loss would have been tremendous from Kingsley Dam to Kearney. This same fact holds true for the area above Lewellen which received storage water from Pathfinder Reservoir. However, since the reservoirs, by imposing conservation measures, did adequately supply the needs, crop production in this large area was good and considered normal, except as previously stated for the small projects holding no storage rights and with priorities subsequent to June 14, 1894.

The situations on the Lodgepole Creek and on the Niobrara River were similar to those in the Platte River Basin. Those with early rights and those with storage water available fared very well while those with later appropriations and without storage water suffered material losses.

The natural flow water supply in all streams of the Republican River Basin was less in 1955 than in any year since the dry thirties. The supply in 1956 was only slightly better than the previous year, however, general conditions affecting crop growth were substantially better.

Private irrigation development was greatly extended on all of the streams of the basin which generally have dependable summer flows. The availability of surplus storage water in the Bureau of Reclamation reservoirs which could be contracted for under Warren Act Contracts by these late appropriators made their small ventures dependable. However, the Bureau of Reclamation announced before the beginning of the 1956 irrigation season that only those who had contracted for storage water in 1955 or before would be eligible for contracts in 1956. These Warren Act Contracts are on an annual basis and subject to water being available in the Bureau's reservoirs. When Bureau of Reclamation projects just completed and those under construction are fully developed it is not likely that there will be any surplus storage water for delivery under Warren Act contracts.

The use of water in the Big Blue River Basin was greatly extended, as it was in the Little Blue River Basin. The flow of the Big Blue River above Milford was insufficient to supply all of the appropriators during the late summer months of both 1955 and 1956. In fact, during August and most of July in both years the entire flow above Seward was barely enough to supply one senior appropriator just upstream from Seward. The supply from Seward to

Milford was substantially better but many junior pumps were closed at times when crops were most in need of water.

Flows of Lincoln Creek, Beaver Creek, and the West Fork of the Big Blue River were also so low that it was necessary to regulate diversions for irrigation during both years. An effort to accomplish satisfactory regulation in this basin in 1955 was made by temporarily assigning an experienced man from the Bridgeport office to the area. This proved to be unsatisfactory and, when antecedent conditions indicated an even more severe water shortage in 1956, a full time water commissioner was assigned to the area for the June-August period. This move proved to be more satisfactory but, with increased irrigation from the streams, the need for an additional commissioner was apparent.

It has also become apparent that irrigation pumps on streams with short supplies of water must be equipped with meters. The Department has the authority to require the installation of measuring devices on every canal or other means of diverting the public waters. The meters are relatively costly and we have endeavored to spare the appropriators this expense by seeking the cooperation of the water users. There are a rather large number who are not inclined to cooperate, so it is probable that all will be required to install meters in the near future.

Administration on the principal streams in the Loup River Basin was initiated for the first time in the spring of 1955. The Loup River Public Power District made a written demand on the Department to administer the water to protect its appropriation for 3,500 second-feet under a priority of September 15, 1932. The irrigation appropriations of the North Loup River Public Power and Irrigation District and the Middle Loup Public Power and Irrigation District, except for certain reservations, are junior to the appropriation of the power district as are the appropriations of some 400 irrigation appropriators who pump water from the streams of the basin upstream from the power diversion near Genoa.

All of the applications for irrigation from the Loup River and its tributaries above Genoa which have been approved since the approval of the power appropriation have called attention to the power appropriation and to the constitutional provision which provides that water appropriated for power may be taken for agricultural use upon the payment of "just compensation" to the prior power appropriator. However, the power district had not before seriously objected to use of water without such compensation and it was difficult for the junior irrigators to realize that they were actually faced with making payments to the district if they wished to continue to irrigate.

Since no settlement had ever been made with regard to the payment which the district should receive as just compensation for a

given amount of water, one of the big obstacles in the parties reaching an understanding was the arrival at a rate of payment. The power district determined that each acre-foot of water diverted upstream was worth one dollar in the production of power, based on cost records kept by the district. An agreement for 1955, with the option of the irrigator to renew in 1956, was reached whereby the irrigator deposited in escrow an amount of money equal to one dollar per acre-foot for the amount of water estimated he would divert during the remainder of the season as a guarantee of payment of the amount which would be determined to be "just" in a settlement to be reached between the U. S. Bureau of Reclamation and the Loup River Public Power District relative to the water to be diverted for the land in the Sargent Irrigation District. Although the irrigators were reluctant to accept the situation, they realized that they could not legally do otherwise and they were generally cooperative.

To carry out the water administration in the Loup Basin one engineer, one hydrographer and two water commissioners were assigned to full time duty during the summer of 1955. Prior to this time the one hydrographer had spent part time in administering on Mud Creek and on certain other tributary streams where local shortages occurred occasionally. These employees inventoried the pumps in the basin and set up schedules for their operation, based on the terms of their permits and the amounts of water for which compensation was paid to the district. The pump irrigators were generally cooperative although there were some instances where they were not. In two cases the Department resorted to court action in order to secure compliance.

The most difficult problem confronting the Department in the Loup Basin administration was associated with the regulation of the diversions for irrigation by the North Loup River, and the Middle Loup Public Power and Irrigation Districts. The Department, interpreting the district's permits and the numerous court decisions concerning them, notified the two districts that their diversions would be limited to one acre-foot per acre for each acre listed on their 1955 acreage reports. No objections were made to these regulations by the irrigation districts or by the Loup River Public Power District within the thirty day period allowed by the Department's rules for filing objections.

However, when the allotments were almost exhausted late in July, the irrigators appealed to Governor Anderson for permission to divert more water. The fact that a suit to determine the extent of the power district's waiver of priority had been filed in Federal District Court by the North Loup River Public Power and Irrigation District was cited as justification for the holding in abeyance of our order limiting diversions to one acre-foot per acre. By direction of the Governor, the earlier regulation was modified to permit the irrigation districts to divert the maximum amount specified in

the reservations set out in the permit of the power district, computed from June 6, 1955.

Neither the rate of diversion nor the aggregate diversion permitted under the modified order satisfied the North Loup District, and efforts to regulate them were resisted. The North Loup Water Users Association obtained a temporary injunction in the County Court to restrain the power district from interfering with the use of water by the North Loup District. This order was dissolved by the District Court Judge after a few days, whereupon the Water Users Association entered into an agreement to compensate the power district to permit the diversions to continue at the excessive rate until September 15, 1955, when the North Loup District closed its canals. The Middle Loup District did not exceed the amount of its reservation before it closed its canals in the fall.

It was believed by all concerned that the suit which had been pending in the Federal District Court since May 1955, would either be dismissed for lack of jurisdiction, as pleaded by this Department, or a decision rendered prior to the beginning of the 1956 irrigation season. However, the suit was not disposed of so the Department continued under the policy set down by the Governor in 1955 as far as the diversions for irrigation by the two irrigation districts were concerned. Early in September 1956, the Loup River Public Power District filed an action in the District Court of Platte County to restrain the Middle Loup District from diverting more than one-acre-foot per acre for each acre actually irrigated on or before October 1, 1944, and to restrain this Department from permitting the diversion of more than that amount. The matter was pending at the end of the biennium.

Administration for 1956 was very similar to that for 1955. It was an unusually dry season, rainfall was well below normal and the natural flow supply was low. As in 1955, those having storage rights fared well and experienced normal production. Those without storage and having priorities junior to June 1894, suffered considerable loss because of the lack of natural flow. However, the area involved in the latter category was small when compared to the overall area irrigated, therefore, the effect on the economy of the entire area was of little consequence.

Storage water was adequate for good production during both years. However, because of the two successive dry years carryover storage is now at a critical stage imperiling next year's prospects.

In summarizing our administrative problems for the biennium it should be stated that they were many because of the two abnormally dry years and short natural flow supply. However, the many problems were handled without unusual difficulties because of the excellent cooperation of all parties concerned.

HYDROGRAPHY

The cooperative stream gaging program of the U. S. Geological Survey and the Department of Roads and Irrigation continued during the biennium on a dollar-for-dollar matching basis, each agency providing \$50,000.00 or equivalent service annually. An average of 73 gaging stations were maintained and operated under the cooperative program during 1955 and 1956. Of the 73 stations, 9 were operated without recorders. In addition, the Geological Survey has been maintaining about 89 other gaging stations, 83 with recorders and 6 without recorders, in cooperation with other agencies and in connection with inter-state compacts and in the interests of Federal Agencies engaged in planning water resources developments in the Missouri River Basin.

During the biennium the Department employed ten hydrographers whose time was primarily devoted to measuring flows in streams and canals. Some of their time was spent on office work computing charts, checking and recording permanent records, while some time was also spent on regulation and investigation of appropriations, and other water problems.

In addition to the regular hydrographic and administrative work special assistance is often given to other State and Federal agencies and irrigation districts. The same size force has been employed during the past two bienniums. The need for the services of these employees increases as new projects are developed which will require some employee expansion in the future.

NEW DEVELOPMENT

In the Republican River Basin new lands were supplied water for the first time under Bureau of Reclamation projects which were in various stages of completion. The Cambridge and Bartley Canal systems were completed during the biennium and 14,000 acres were irrigated under them in 1956. The total potential acreage under the two canals is approximately 21,625 acres.

The Franklin, Franklin Pump, and Naponee Canals and their lateral systems were virtually completed and some 15,000 acres of an eventual 28,000 acres were irrigated in 1956 under these canals and the Courtland and Superior Canals. The Frenchman-Cambridge and the Nebraska Bostwick Irrigation Districts expect to assume full responsibility for the operation and maintenance of the completed canal systems in 1957.

Major contracts under way at the end of the water year in the Frenchman-Cambridge Irrigation District were the 15-Mile Upper Meeker Canal, the Upper Meeker subcanal, laterals and drains. These are part of the facilities which will serve the Meeker-Driftwood Unit, including lands under the old Meeker Canal, lying south and

west of McCook. Storage water in Swanson Lake will constitute the principal supply for the 16,000 acres in the unit.

Prospects for the early construction of irrigation facilities for the Frenchman Unit were enhanced by the completion late in 1956 of arrangements whereby the U.S. Bureau of Reclamation acquired the old Culbertson Canal from the Frenchman Valley Irrigation District. The canal will be enlarged, improved and extended to better serve the 10,000 acres now irrigated and to furnish water for 12,000 acres of new lands in the recently organized Hitchcock and Red Willow Irrigation District. The new lands, frequently referred to as the McCook table lands, lie west of McCook.

The authority to construct the Red Willow Reservoir on Red Willow Creek north of McCook was transferred from the Corps of Engineers to the Bureau of Reclamation by the last Congress. According to a recent report of the Bureau of Reclamation, construction of the Red Willow Dam is now scheduled to start in the summer of 1959. This will be a multiple-purpose project with irrigation storage to supply lands along Red Willow Creek and elsewhere in the Frenchman-Cambridge Irrigation District.

Rapid progress was made in the construction of the facilities for lands north of the Middle Loup River in the Sargent Irrigation District. The Milburn Diversion Dam and the first nine miles of the Sargent Canal were completed in the spring of 1956. The second section of the canal and the first section of the lateral system were nearly completed at the end of the water year. The contracts for the third and final section of the canal and for the remaining laterals and other facilities have been awarded. It is anticipated that the canal and lateral system will be ready for use in the spring of 1958. Tentative plans are being made for furnishing irrigation service to some 6,000 acres under the canal in 1957.

Construction of the Lillian Canal, which will serve Sargent Irrigation District lands on the south side of the river and other lands, has not been scheduled.

The Bureau of Reclamation and the Sargent Irrigation District are negotiating with the Loup River Public Power District in an effort to reach an agreement as to the "just compensation" which should be paid to the power district for water which will be consumed in irrigating the Sargent lands which would otherwise be available to the power district under its prior appropriation.

The Farwell Unit, on the Middle Loup River, was reauthorized by the last Congress and the Farwell Irrigation District, which was formed in 1954, is negotiating a repayment contract with the Bureau of Reclamation. Construction of the unit has not been scheduled as no funds have yet been appropriated for the work.

The Ainsworth Unit in the Niobrara River Basin was authorized by the last Congress. The Ainsworth Irrigation District has negotiated a repayment contract with the Bureau of Reclamation. The scheduling of construction of this unit also awaits the appropriation of funds by the Congress.

The Nebraska Mid-State Reclamation District continued its efforts throughout the biennium to obtain Federal assistance in the construction of its proposed irrigation and power development in the Lower Platte Valley. However, the necessary legislation had not yet been enacted by the Congress.

The continuation of the severe drought during the biennium caused an unprecedented expansion in the use of water from the streams in the eastern part of the State. The great extent of this expansion is readily apparent from the number of applications filed for permits to appropriate water. There were 1,300 applications filed in the two year period ending September 30, 1956. During the preceding two-year period 889 applications were filed, and in the two years before that there were only 296 applications filed. Another interesting observation is that the number of applications handled by this office during the biennium amounts to 15 percent of all the applications filed since April 4, 1895, when the present law became effective. The number of acres to be irrigated under each of the new applications is relatively small, probably averaging about 60 acres. However, in the aggregate, they constitute a sizable portion of the total lands being irrigated in the State. In addition to the irrigation from natural streams, for which permits are required by law, there was a large increase in irrigation from ground water. Reliable estimates place the number of new wells installed during the biennium at more than 4,000. It is estimated that an average of about sixty acres are irrigated by each well.

In the North Platte River Basin, construction of the Glendo Dam and power plant, initiated in December, 1954, by the Bureau of Reclamation, was proceeding satisfactorily. A recent report of the Bureau of Reclamation shows that the dam was more than 50 percent completed in the summer of 1956. Present schedules call for the completion of the dam and Glendo power plant by April 1958. This development is of interest to Nebraska for the reason that it will serve as a reregulating reservoir for releases of storage water from the Pathfinder Reservoir destined for lands in the North Platte Project in Eastern Wyoming and Western Nebraska. It will provide a supplemental supply of water for Wyoming and Nebraska lands in the State-Line area which do not now have permanent contracts for storage water, and it will increase the amount of power available from the North Platte River hydro-electric plants by some 300,000,000 kilowatt hours annually.

If the current drought conditions continue, it is likely that the early operation of Glendo Reservoir will be limited to reregulating North Platte project storage water enroute to land in the project.

Officials of the Bureau of Irrigation, Water Power and Drainage, continued active participation in the meetings and affairs of the Missouri Basin Inter-Agency Committee.

The 1955 Legislature repealed a provision of the statutes which required the Bureau of Irrigation to supervise the letting of contracts by public power and irrigation districts. The act which became effective on September 18, 1955, relieved the Department of a responsibility which consumed a large amount of time and involved considerable expense.

STATISTICAL SUMMARY

The following is a summary of the statistical record for the biennium ending September 30, 1956:

Applications for water appropriations	1296
Appropriations canceled	280
Appropriations canceled in part	8
Applications dismissed	8
Claim for water appropriation adjudicated	
Applications to use ground water for irrigation filed	1861
Total ground water applications filed pending enactment of legislation	3198*
Hearings held Re: Water appropriations	36
Hearings held Re: Rural Public Power Districts	4
Relocation petitions	12
Irrigation Districts organized under Ch. 46-101, R. S. 1943	1
Reclamation District organized under Art. 5, Ch. 46, R. S. 1943	2
Deeds recorded (involving 128 appropriations)	97
Reports of field investigations	60
Maps and Plans	743
Stream measurements	9032
Canal measurements	8984
Stream gaging stations with recording gages	147
Stream gaging stations without recording gages	29
Canal gaging stations with recording gages	111
Fees collected covering:	
Applications, plans, power leases, deeds, petitions, certificates, and copying records	\$61,298.11

* There is no law upon the statutes governing the use of ground water for irrigation, and each application is accepted for whatever value it may have pending enactment of legislation.

COURT DECISIONS

IN RE APPLICATION, NORTH LOUP RIVER PUBLIC
POWER AND IRRIGATION DISTRICT

V.

LOUP RIVER PUBLIC POWER DISTRICT

33867

Filed February 17, 1956.

1. The Department of Roads and Irrigation has authority, granted by statute, to adjudicate all matters pertaining to the granting and cancellation of water rights and priorities.

2. When an application for the appropriation of public waters has been adjudicated, it becomes a final order unless an appeal is taken to this court.

3. Section 46-229.02, R. R. S. 1943, does not fix the time in which an appropriator must put water to a beneficial use under a new application. Its provisions relate solely to the cancellation of water appropriations for nonuser.

4. The time in which water must be put to a beneficial use by applying it to the lands designated in the application must be determined from the terms, conditions, and limitations of the adjudicated appropriation.

5. The grant of an appropriation is a conditional right which becomes a perfected appropriation only when the works are completed and the water put to a beneficial use in compliance with the terms, conditions, and limitations of the appropriation as adjudicated by the Department of Roads and Irrigation.

6. The volume of water to be diverted, the rate of its diversion, and its priority as to time, are controlled by the terms, conditions, and limitations of the adjudicated appropriation and, unless appealed from, it becomes final and is not subject to collateral attack.

7. The right of the Department of Roads and Irrigation to adopt rules, as provided by section 46-209. R.R.S. 1943, is for the purpose of establishing a procedure to expedite the determination of matters over which it has been given jurisdiction.

8. The right to promulgate rules to expedite the determination of controversial matters within the jurisdiction of the Department of Roads and Irrigation to determine, does not authorize such department to establish rules which purport to expand, amend, or destroy adjudicated rights.

9. A rule promulgated by the Department of Roads and Irrigation which authorizes the department to expand, amend, or limit an adjudicated right is void and of no force and effect.

10. The Department of Roads and Irrigation has no authority to grant an extension of time to perfect an adjudicated appropriation, except where such authority is expressly granted by statute.

11. Under the public policy of this state an appropriator is not permitted to retain an interest in public waters, to which he has a valid appropriation, which are not put to a beneficial use within a reasonable time.

12. It is the function of the Department of Roads and Irrigation to determine what constitutes a reasonable time at the time the application for an appropriation is adjudicated and, if any interested party is dissatisfied with the findings of the department, the remedy is by appeal to this court.

Heard before Simmons, C. J., Carter, Messmore, Yeager, Chappell, Wenke, and Boslaugh, JJ. CARTER, J.

This is an appeal from an order entered by the Department of Roads and Irrigation granting an extension of time to October 1, 1957, to the North Loup River Public Power and Irrigation District for completing the application of water to beneficial use under water rights obtained by it under Application 2312.

For convenience we shall hereafter refer to the North Loup River Public Power and Irrigation District as the irrigation district, the Loup River Public Power District as the power district, and the Department of Roads and Irrigation as the department.

The record in this case shows that on September 15, 1936, the department granted an appropriation of water for irrigation purposes with a priority date of March 28, 1933, to the irrigation district. The order granting the appropriation provided that the construction work should begin on or before March 15, 1937, and be completed by November 1, 1939. The time fixed for completing the application of water to the beneficial use indicated was October 1, 1944. The grant of appropriation contained the following specific limitation: "The amount of the appropriation shall not exceed 260.00 cubic feet per second of time; neither shall it exceed the capacity of said ditch or canal, nor the least amount of water that experience may hereafter indicate as necessary for the production of crops in the exercise of good husbandry; and, further, said appropriation, under any circumstances, shall be limited to one-acre foot for each acre of land to which water is actually and usefully applied on or before October 1, 1944."

On September 16, 1944, the irrigation district filed a petition with the department to obtain an extension of time within which to apply water to beneficial use under the appropriation. An order was entered by the State Engineer extending the time to October 1, 1949, without notice or hearing. On September 27, 1949, a second petition was filed by the irrigation district praying for a further

extension of time to October 1, 1954, for the application of water to beneficial use under its appropriation granted pursuant to Application 2312. On September 29, 1954, the irrigation district filed a third petition praying for a further extension of time to October 1, 1959, for the application of water to beneficial use under the same appropriation.

The power district filed objections to the petitions for extensions of time filed on September 27, 1949, and September 29, 1954. The objections in each instance alleged in substance that the construction of the irrigation district's irrigation works was completed in 1938 and that owners of land subject to irrigation under the irrigation district's appropriation could have been supplied with water for irrigation purposes had they desired it and, having failed to make use of such water for more than 10 years, they had no right to water under the irrigation district's appropriation; and that the department had no jurisdiction, power, or authority after construction had been completed to extend the time to put appropriated waters to a beneficial use beyond a period of 3 years from the date water became available.

The cause was tried before the department and resulted in an order extending the time to complete the application of water to a beneficial use to October 1, 1957. The sole issue is the validity of the department's order extending the time for compliance with the conditions and limitations contained in the irrigation district's appropriation right as granted by the department.

The disposition of the case depends upon the nature of the irrigation district's appropriation rights. It is clearly recognized that the department has authority, granted by statute, to adjudicate water rights in this state. It is invested with certain quasi judicial powers which have application only to the granting and cancellation of appropriation rights and priorities. *State ex rel. Cary, v. Cochran*, 138 Neb. 163, 292 N.W. 239; *Loup River Public Power Dist. v. North Loup River Public Power & Irr. Dist.*, 142 Neb. 141, 5 N. W. 2d 240. The approval of an application for an appropriation of public waters under section 46-235, R.R.S. 1943, is an exercise of the quasi judicial powers of the department. It will be noted that under the foregoing section of the statute the department, upon examination of the application, may endorse its approval "for a less period of time for perfecting the proposed appropriation, or for a less amount of water, or for a less amount of land than applied for." An aggrieved applicant is given an opportunity to be heard by the department, and the further right to appeal to this court from an adverse decision. In *Loup River Public Power Dist. v. North Loup River Public Power & Irr. Dist.*, *supra*, we said: "Under the provisions of Section 81-6317, Comp.St. 1929, the department may approve the application for an appropriation of public waters in an amount less than that applied for. If the applicant be dissatisfied, the remedy is by appeal

to the Supreme Court, and if he fails to appeal, the appropriation as made is final." Otherwise stated, unless an appeal is taken from the adverse order of the department, the decision of the department is final and the issues finally adjudicated.

It is urged by the power district that the irrigation district is limited to a period of 3 years in applying appropriated waters to a beneficial use on the lands described in the application which received departmental approval. We do not concur in this view. The foregoing contention appears to arise from the language contained in section 46-229.02, R.R.S. 1943, which states: "If it shall appear that any water appropriation has not been used for some beneficial or useful purpose, or having been so used at one time has ceased to be used for such purpose for more than three years, the department shall appoint a place and time of hearing, * * * to show cause * * * why the water appropriation owned by such person should not be declared forfeited and annulled, * * *." The power district cites the following from *Enterprise Irrigation Dist. v. Tri-State Land Co.*, 92 Neb. 121, 138 N.W. 171, as supporting its position: "This precise question may never arise again in this state, for by an amendment made in 1911 to section 18, ch. 93a, Comp.St., a time is specifically limited for the application of water, and a method of procedure established by which the question of nonuser or lack of diligence is determined."

In a consideration of this contention we take note of the fact that the irrigation law of this state was substantially changed in 1895 in that the department was then charged with the duty of adjudicating the rights of appropriators. Laws 1895, c. 69, s. 16, p. 248. It is evident, also, that there were numerous applications not perfected and many appropriations which had been abandoned that required legislative attention. The Legislature in 1911 directed the department to proceed to adjudicate all rights of appropriators which had not been adjudicated, and directed the department to forfeit and annul all appropriation rights where it appeared that any water appropriation had not been used for some beneficial or useful purpose, or having been so used at one time had ceased to be used for such purpose for more than 3 years. Laws 1911, c. 153, s. 17, p. 503. We do not construe this to mean that the statute requires that an appropriator is necessarily limited to such period of 3 years in putting appropriated waters to beneficial use under a new application. We think the time in which such waters must be put to a beneficial use must be determined from the terms, conditions, and limitations of the adjudicated appropriation right. The *Enterprise* case misconstrues the meaning of the statutes, particularly when considered in the light of its legislative history and purpose.

The initial step for procuring an appropriation right for irrigation purposes is the filing of an application for such permit. The granting of the application, in full or in part, is an adjudication

which fixes the maximum volume of the appropriation, the rate of diversion, and the priority date. If an applicant is dissatisfied with the terms of the appropriation allowed, he must appeal, or the order becomes a final and binding adjudication. Its grant by the department is notice to senior and junior appropriators, as well as new applicants, of the extent of the appropriation. The grant of the appropriation by the department, however, is a conditional right which becomes a perfected and completed appropriation only when the works are completed and the waters put to a beneficial use in compliance with the conditions and limitations of the grant. It confers upon the applicant the prior right to the water against all subsequent applicants during the progress of the work if, and only if, he finally complies with the conditions and limitations of the appropriation as adjudicated by the department. Commonwealth Power Co. v. State Board of Irrigation, 94 Neb. 613, 143 N.W. 937.

We necessarily conclude that the volume of water to be diverted and the rate of its diversion, as well as the priority date of the appropriation, are controlled in the instant case by the terms, conditions, and limitations of the department's grant made on September 15, 1936. This was an adjudication of the irrigation district's application and, in the absence of an appeal to this court, became final and binding. The date fixed by this final adjudication for applying water to a beneficial use to the lands set out in the application was October 1, 1944, a date 5 years after the time fixed for the construction of the irrigation district's irrigation works. We hold that the department's order granting the appropriation fixes the time for the applying of water to a beneficial use, and not section 46-229.02, R.R.S. 1943, as claimed by the power district.

The irrigation district contends that the department has the authority to extend the time in which the terms, conditions, and limitations of the grant may be met. In this respect the irrigation district points out that the rules promulgated by the department provide for the filing of petitions for the extension of time in which water may be beneficially applied to the lands described in the application for the appropriation which was granted. It is pointed out, also, that the department has on many occasions issued such orders extending the time in which water may be applied to lands subject to an appropriation.

Under the provisions of section 46-209, R.R.S. 1943, the department is required to adopt rules, the pertinent part being: "The Department of Roads and Irrigation is given jurisdiction over all matters pertaining to water rights for irrigation, power or other useful purposes, highways, and drainage, and shall adopt rules governing matters coming before it." There can be no question of the right of the department to adopt procedural rules to expedite the determination of matters over which it has been given jurisdiction. While the rules cited in the present case may be procedural in their

nature, they are set up to include and expedite matters which the department is not authorized to determine. The adjudicated appropriation of September 15, 1936, provides that water must be beneficially applied to the described lands by October 1, 1944. If this provision was unsatisfactory the order should have been appealed from. No appeal having been taken, it is a final and binding provision of the appropriation granted, and is a limitation upon the appropriation on which other appropriators or new applicants have a right to rely. If this were not so the public record required to be made in the office of the department would serve no useful purpose as a public notice of the terms, conditions, and limitations of the appropriator's adjudicated grant. If, after adjudicating an applicant's appropriation right, the department could change the effect of the same in a manner not authorized by statute, the adjudication would be reduced to uncertainty and be devoid of the finality that an adjudication implies. We think that the department has no more authority to extend the time for applying water to beneficial use beyond the time fixed in its adjudicated order than it has to change or amend the provisions of other terms, conditions, or limitations contained in the appropriation which it adjudicated. While the department has authority to promulgate rules by which controversial matters may be heard and determined, it is not granted authority to expand, amend, or destroy adjudicated rights. To provide procedural processes by rules to expedite the determination of matters within its jurisdiction is one thing; to provide rules to limit or expand adjudicated rights is quite another. The one is authorized; the other is not. This conclusion is supported by our statement in *Plunkett v. Parsons*, 143 Neb. 535, 10 N.W. 2d 469, wherein we said: "The legislative grant of jurisdiction to the department of roads and irrigation does not extend to it power to adjudicate vested rights * * *." We conclude that the department has no authority to extend the time for the application of water to a beneficial use on lands described in the adjudicated appropriation beyond the time therein fixed and, consequently, its promulgated rules providing for such extensions are of no force and effect.

It is pointed out that this court in the case of *In re Application of Babson*, 105 Neb. 317, 180 N.W. 562, affirmed an order by the department extending the time to commence work on a hydroelectric power plant for the operation of which an appropriation of water for power purposes had been made. The court found that "unavoidable cause" had been shown under the provisions of the statute, which is now section 46-238, R.R.S. 1943. An examination of this section reveals that within 6 months from the grant of an appropriation right the applicant must commence the excavation or construction of the works in which it is intended to divert the water and that the applicant "shall vigorously, diligently and uninterruptedly prosecute such work to completion unless temporarily interrupted by some unavoidable and natural cause." It is plain therefore that

an extension of time for construction of a project could be extended where it was temporarily interrupted by some unavoidable and natural cause. The provision has no application to the applying of water to a beneficial use on the lands described in the approved application. A reading of the opinion in the Babson case will plainly reveal its nonapplicability to the case before us.

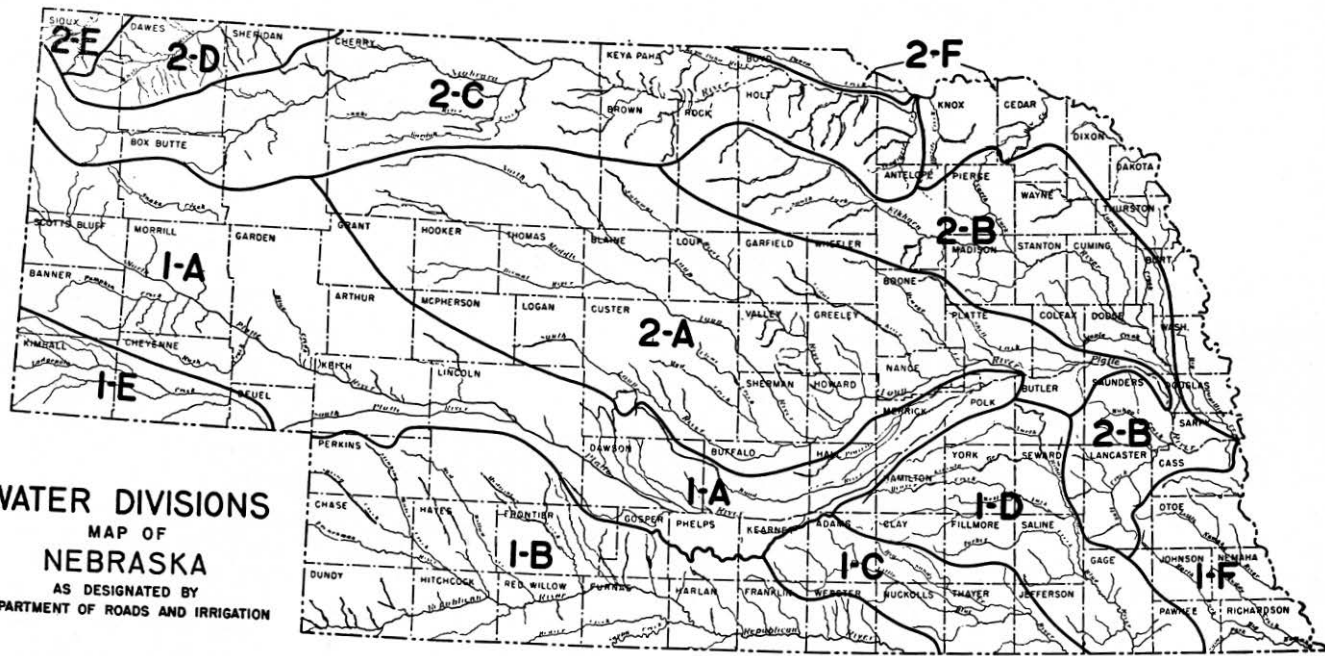

We necessarily come to the conclusion that the irrigation district's appropriation of water for irrigation purposes was adjudicated on September 15, 1936, and finally determinable by the provisions of the grant on October 1, 1944. The district's appropriation right was initiated by an application. It was considered and approved by the department. No appeal was taken and the order of the department became a final adjudicated order. It is true that the order was conditional and that the appropriation was perfected only when compliance with the terms, conditions, and limitations of the adjudicated grant had been met. The grant provided that construction should commence on or before March 15, 1937, and should be completed on or before November 1, 1939. A map or plat was required to be filed in accordance with the rules of the department. No complaint is made of any noncompliance with these conditions. The grant provided further that the amount of the appropriation should not exceed 260 cubic feet per second of time and that it should be limited to one-acre foot for each acre of land to which water was actually and usefully applied on or before October 1, 1944. These conditions are limitations upon the extent of the appropriations granted and constitute an adjudication of the district's appropriation. The department enlarges the adjudicated right if it is permitted to extend the time water may be put to beneficial use and thereby permit the amount of the appropriation to be increased by one-acre foot for each acre of land to which water is beneficially applied after October 1, 1944. To permit such an extension is necessarily injurious to the adjudicated rights of junior appropriators and the rights of new applicants. We are required to hold that the number of acre feet to which the irrigation district is entitled under its appropriation is fixed by the determination of the number of acres of land described in the application to which water has been beneficially applied on or before October 1, 1944. The attempt of the department to extend the time beyond October 1, 1944, is in violation of law and a deprivation of the vested appropriation rights of subsequent appropriators. It is consistent with the general policy for the appropriation of public waters in this state. In *State v. Birdwood Irr. Dist.*, 154 Neb. 52, 46 N.W. 2d 884, we stated that public policy in part as follows: "An appropriator will not be permitted to retain an interest in public waters, to which he has a valid appropriation, which are not put to a beneficial use. Such a rule would be contrary to the policy of the state that the necessity for water for irrigation is a public want and that the public waters of the state, available for appropriation for irrigation purposes, should be ad-

ministered to secure the greatest benefit possible therefrom. An appropriator will not be permitted to retain an interest in the use of public waters which he has never put to a beneficial use, or having been once put to a beneficial use had failed for the statutory period to continue such beneficial use. It is the express duty of the department to determine the appropriations, or parts thereof, which are subject to forfeiture for non-user and make the waters covered thereby available to junior appropriators or new applicants. It is the duty of the department to protect the rights of any and all the appropriators of public waters. It is its duty also to see to it that the maximum amount of water may be subject to appropriation."

The order of the department appealed from is reversed and set aside for the reasons stated.

REVERSED.

WATER DIVISIONS AND WATER DISTRICTS

WATER DIVISIONS: DENOMINATION

The State of Nebraska is hereby divided into two water divisions, denominated Water Division No. 1 and Water Division No. 2, respectively. (Reissue Revised Statutes, 1943, 46-215).

WATER DIVISION NO. 1. BOUNDARIES

Water Division No. 1 shall consist of all the lands of the state drained by the Platte rivers and their tributaries lying west of the mouth of the Loup river; and also all other lands lying south of the Platte and South Platte rivers that may be watered from other superficial or subterranean streams not tributary to the Platte river. (Reissue Revised Statutes, 1943, 46-216).

WATER DIVISION NO. 2. BOUNDARIES

Water Division No. 2 shall consist of all lands that may be watered from the Loup, White, Niobrara and Elkhorn rivers and their tributaries, and all other lands of the state not included in any other water division. (Reissue Revised Statutes, 1943, 46-217).

For convenience in the adjudication of claims and in the distribution of water, these divisions have been subdivided into twelve water divisions, denominated 1-A, 1-B, 1-C, 1-D, 1-E, 1-F, 2-A, 2-B, 2-C, 2-D, 2-E and 2-F, as shown on the opposite page.

CLAIMS AND APPLICATIONS

The following tables give a complete list of all claims and applications of record in the Bureau of Irrigation, Water Power and Drainage, which have not been canceled. This list also includes applications which have been filed and not approved.

The claims and applications have been arranged in each water division by streams in alphabetical order, and the appropriations on each stream are arranged in order of priority.

Appropriations having docket numbers refer to claims covering rights which were acquired under the law prior to April 4, 1895, and those having application numbers are to appropriate water under the law of 1895.

Following these tables are the applications and claims which have been canceled, or dismissed during the past two years.
