## State of Nebraska

Dwight W. Burney, Governor  
LINCOLN 9

IN REPLY REFER TO

November 30, 1960

The Honorable Dwight W. Burney  
Governor of Nebraska  
Lincoln, Nebraska

Dear Governor Burney:

I have the honor to transmit to you herewith the Thirty-third Biennial Report of the Department of Water Resources.

This report covers the activities of this department during the 1959 and 1960 water years, the two-year period which ended on September 30, 1960. More specifically, the report contains a list of the water appropriations, a list of the public districts organized under Chapter 70, Article 6, and a list of the reclamation districts organized under Chapter 46, Article 5, Reissue Revised Statutes, 1943, as they were of record on September 30, 1960.

Respectfully submitted,

Dan S. Jones, Jr.  
Director of Water Resources

**Thirty-Third Biennial Report**

**of the**

**DEPARTMENT OF WATER RESOURCES**

**TO**

**HONORABLE DWIGHT W. BURNEY  
GOVERNOR OF THE STATE OF NEBRASKA**

**LINCOLN, NEBRASKA**

**1959-1960**

## WATER SUPPLY

During the irrigation seasons of 1959 and 1960 the natural flow supply in all rivers and streams in the western third of the state was the lowest of record for any two consecutive years, with 1960 being the lowest. During July and August when the demand for water for crops is the greatest, rainfall in this section of the State was far below normal during both years. Our weather station at Bridgeport for the period July 1 to August 25, 1960 showed rainfall to be 50% of normal. The Scottsbluff station reported for the calendar year 1960, the rainfall was the lowest since the weather station was started in 1893. Except for the western one-third of the State rainfall during 1960 was above normal.

The runoff of the North Platte above Pathfinder Dam was 724,070 acre-feet during 1959 water year and 786,210 acre-feet during the 1960 water year, or 58 per-cent and 63 per-cent respectively of the 50-year average, 1904-1953 (1,253,000 acre-feet). These figures show a large deficiency of natural flow above Pathfinder and it was likewise deficient between Pathfinder and the Tri-State Dam. The United States Supreme Court decree does not require any water to pass the Tri-State Dam. All canals diverting below the Tri-State Dam depend upon surface runoff and return flow developing in Nebraska. While natural flow and rainfall were well below normal during this biennium in the section above Tri-State Dam, an ample supply of storage was available to produce good crops. The ample storage supply for 1959 and 1960 was due to a 1958 storage carry over of 342,000 acre-feet, while the carry over from 1960 was only 15,650 acre-feet. Therefore the water supply for 1961 does not look very promising at this time.

The discharge of the North Platte River below the Tri-State Dam for the water year 1959 was 145,170 acre-feet and while figures for 1960 are not yet available it is estimated the discharge was less than for 1959. The mean annual discharge at the Tri-State Dam for the period 1939-1953 was 280,300 acre-feet. The decline in water passing the Tri-State Dam is to some extent due to a reduction in power production at Guernsey during the non-irrigation season and abandonment of the Lingle power plant but to a large extent due to below normal runoff during the dry years 1959 and 1960. The Guernsey plant is now operated only when water is being released for irrigation or when all storage appropriations above Guernsey Dam have been satisfied and flood water is being released. This reduced natural flow supply during the biennium in the North Platte River basin did, however, contribute to a water shortage for many junior diversions and reduced the amount normally available for storing in Kingsley Reservoir.

The amount of the annual flow in the river at Lewellen, at the upper end of Kingsley Reservoir, has a material effect upon the

amount of storage in the reservoir and during the irrigation season on the amount of natural flow available for diversions from the North Platte and Platte Rivers as far east as Kearney. The 10-year mean annual flow at Lewellen in the North Platte River for the years 1942 to 1951 was 1,126,360 acre-feet. During the water year 1959 this flow was 771,400 acre-feet and during 1960 it was 685,180 acre-feet or 68% and 61% of the mean, respectively.

Analyzing the situation with regard to the natural flow supply for direct flow irrigation diversions, the flow at our gaging stations on the North Platte River at Bridgeport and Lewellen during the months of July and August will show whether it is good or bad. These two stations, which have little if any storage passing, are used as key stations in determining the priority distribution of the available natural flow. If the flows at the two stations are normal, they will usually be normal farther east, on the North Platte and Platte Rivers, as far as Cozad where major diversions end.

During the ten year period, 1942-1951, the mean flow during July and August at Bridgeport was 127,680 acre-feet and at Lewellen 137,340 acre-feet. During the same period the flow in 1959 at Bridgeport was 36,810 acre-feet and at Lewellen 31,740 acre-feet. During the same period in 1960 these flows at Bridgeport were 21,430 acre-feet and at Lewellen, 19,190 acre-feet. Percentagewise, considering the 1942-1951 mean as normal, during the period for 1959 the flow at Bridgeport was 29% of normal and at Lewellen 23% of normal, and for 1960 it was 17 and 14 percent, respectively. These figures show that during both years of this biennium the natural flow supply was well below normal and during 1960 it was less than in 1959. During both years the water situation was critical for all irrigators in the Platte River Basin who had no supplemental supply but depended upon natural flow only.

The South Platte River during a normal year will provide about 200,000 acre-feet at its confluence with the Platte River at North Platte. During the water year 1959 the total discharge at North Platte was 109,680 acre-feet and in 1960 it was 117,940 acre-feet. This indicates an abnormally low supply of natural flow during the biennium in the South Platte and tributaries.

That section of the Niobrara River from the Nebraska-Wyoming State Line east about 60 miles to the Mirage Flats District diversion, near Old Dunlap, is the only section of the entire river that is over appropriated with regard to water used for irrigation. The annual inflow to the Box Butte Reservoir will indicate the adequacy of the water supply. The 10-year mean inflow for the period 1949-1958 was 23,600 acre-feet. During the water year 1959 the inflow was 20,760 acre-feet and during 1960 it was 22,540 acre-feet.

Because precipitation was normal or above in the central and eastern parts of the State during both 1959 and 1960, no serious

water shortages were experienced in those areas. Moisture conditions were generally favorable in the Loup River Basin. Net diversions for irrigation by the North Loup River Public Power and Irrigation District and the Middle Loup Public Power and Irrigation District were relatively light, being 39,800 acre-feet in 1959 and 37,700 acre-feet in 1960 for the Middle Loup District, and 47,700 acre-feet in 1959 and 40,900 acre-feet in 1960 for the North Loup District. Gross hydrogeneration by the Loup River Public Power District was 127,000,000 KWH in 1959, and 117,300,000 KWH in 1960, 114 percent and 105 percent, respectively, of the average for the last five years.

The irrigation pools of all of the Republican Basin reservoirs filled early in 1959 and a small amount of water was stored for a short time in the flood pools, the maximum aggregate of such flood storage being only about 18,000 acre-feet. Withdrawals from the irrigation pools during the irrigation season reduced their aggregate contents by 167,600 acre-feet.

All of the major reservoirs in the Republican River Basin were full to the top of their irrigation pools and some of the flood control capacity in each of them was occupied by March 12, 1960, as a result of sudden melting of the heavy snow which covered most of the basin, and at one time more than 200,000 acre-feet of their available flood control capacity was occupied. It was not until July 18, 1960, that the flood pools of these reservoirs were completely evacuated, the inflows being such that reservoir releases had to be limited to prevent excessive flows in the river channel below them.

Heavy demands for irrigation water started about August 1, 1960, and prevailed until late in September so that by the end of the water year, September 30, 1960, the combined storage in the irrigation pools had been reduced 119,180 acre-feet. The total carry over storage was some 48,000 acre-feet greater than in 1959, assuring an adequate storage supply for the 1961 operations.

The water supply was apparently adequate to meet all demands in the Blue River Basin and on the minor streams in the eastern third of the state during both years of the biennium. No demands were made on the department for administration in these areas.

## FLOODS

The extremes of climate for which Nebraska is famous were more severe than ever during the winter of 1959-1960. The eastern part of the state experienced one of the greatest snowfalls of record. For example, the City of Lincoln received more than 52 inches of snow between December 27, 1959, and March 20, 1960. Other eastern areas, particularly in the Elkhorn River Basin, experienced

even greater amounts. Contrary to the usual weather pattern of the area, virtually no thawing occurred until late in March. Consequently, nearly all of the snow remained on the ground and accumulated in a record snow pack.

Snow surveys made during March by the U. S. Corps of Engineers and the U. S. Weather Bureau established that in a wide area covering more than the eastern one-third of the state the water content of the snow ranged from two inches to as much as six and seven inches. Melting temperatures occurred in the upper reaches of the Loup, Platte and Republican Rivers for several days before any melting took place in the lower reaches, releasing the ice stored in the river channels. The increased flows from such melting already had the lower reaches full of water when the weather warmed sufficiently to release the tremendous quantities of water stored in the heavy snow pack in the east.

By the week-end of March 26 all of the water from the snow was released and the already choked channels of the Loup, Elkhorn and Lower Platte Rivers were unable to carry it. Floods of a magnitude seldom experienced in Nebraska occurred during the next several days causing millions of dollars of damage. As an example preliminary estimates made by the Corps of Engineers placed flood damages in the Elkhorn Valley in 1960 as follows: Elkhorn River, \$1,770,000; North Fork, \$126,000; Logan Creek, \$196,000; Clear Creek, \$5,000; Rawhide Creek, \$1,000.

Peaks reached at many of the gaging stations had not been exceeded in at least thirty years. The peak flow of the Platte River at Louisville of 124,000 second-feet was the highest recorded there since 1881 or 1882. It, and the run-off at several stations on other streams are considered to be of the order of a 100-year flood.

Governor Ralph G. Brooks became concerned over the probability of disastrous floods occurring. At a general meeting on March 18, 1960, which he had called, representatives of cities and communities in the potential flood areas met with representatives of Federal and State agencies to discuss the flood potential and means of coping with it. As a result of this meeting "Operation Alert" was initiated under the direction of Adjutant General Lyle Welsh. Under his direction, the National Guard, Civil Defense, Safety Patrol, local fire departments and other agencies were mobilized to cope with any emergencies which might result if floods occurred.

Largely through "Operation Alert" residents and livestock were evacuated from danger areas before the floods hit. As a result, virtually no lives or stock were lost as a direct result of the floods. A detailed report of the operation was released by the Adjutant General entitled "After Action Report".

### RESERVOIRS

The Pathfinder Reservoir, located on the North Platte River in Wyoming about 40 miles southwest of Casper, stores water for use on lands situated on both sides of the river in southeastern Wyoming and in the Panhandle area of Nebraska, generally referred to as the North Platte Project and Warren Act Contractors' land. It has a capacity of 1,016,000 acre-feet. The Guernsey Reservoir is also located in Wyoming on the North Platte River downstream from Pathfinder and about 50 miles northwest of the point where the North Platte crosses the Nebraska-Wyoming State Line. It has a capacity of 44,800 acre-feet which is in addition to Pathfinder capacity available to the same users. Guernsey for the most part is operated as a regulator for Pathfinder storage water enroute to project lands and to Warren Act Contractors. It also serves as a power head for the operation of a hydroelectric plant at the reservoir. Lakes Alice and Minatare are inland reservoirs located in Nebraska about eight miles north of Minatare and provide an additional annual storage of 46,000 acre-feet. This makes a total storage capacity of 1,106,800 available to Pathfinder storage users. The four reservoirs are owned and operated by the United States Bureau of Reclamation. During the 1959 water year about 612,000 acre-feet of storage were diverted to the land, and about 587,000 acre-feet were diverted in 1960.

The Glendo Reservoir is located on the North Platte River in Wyoming between Pathfinder and Guernsey Reservoirs and about 4.5 miles southwest of the town of Glendo. It has a capacity of 800,000 acre-feet, with 735,500 acre-feet being active storage, 12,060 acre-feet dead and 52,440 acre-feet inactive storage or a total of 64,500 acre-feet as a minimum head necessary for operating the power plant. Of the active storage space, 100,000 acre-feet are for Glendo Project irrigation, 275,000 acre-feet for flood control and 360,500 acre-feet for irrigation restorage and sediment control. In addition a surcharge capacity of 288,000 acre-feet is available. Water was first stored in the Glendo Reservoir on October 18, 1957. Glendo Project dead storage consists of 12,060 acre-feet, however it can be used temporarily for Glendo Project irrigation when the need arises by replacing it with other storage temporarily stored in Glendo Reservoir, if available. Temporary storage in Glendo may consist in part of Pathfinder, Kendrick, Guernsey, Lake Alice and Lake Minatare storage. This arrangement enhances the firm power output from the various hydros located on the river from Seminoe to Guernsey Reservoirs. Kendrick storage is handled on an exchange basis between Seminoe and Pathfinder Reservoirs so that it can be used for irrigation on the Kendrick Project.

The amount of Glendo Project storage diverted to the land in 1959 was 12,020 acre-feet and in 1960 it was 10,020 acre-feet. This storage is available to canals diverting from the North Platte River for land located in eastern Wyoming and the Panhandle area in

Nebraska which do not have storage available to them from some other source. Glendo Project is limited to storing 40,000 acre-feet per year for irrigation and can accumulate carry over plus the yearly allowance to the extent of 100,000 acre-feet. The storage is allocated for use annually, 25,000 acre-feet to Nebraska and 15,000 acre-feet to Wyoming.

The Central Nebraska Public Power and Irrigation District owns and operates Kingsley Reservoir, officially known as Lake C. W. McConaughy, located on the North Platte River about seven miles north of Ogallala. It has a capacity of 2,000,000 acre-feet, all of which is available for irrigation. The inflow to the reservoir during the water year 1959 was 840,840 acre-feet of which 447,320 acre-feet were intercepted and stored. Approximately 406,650 acre-feet of storage were withdrawn through the dam during the 1959 season. During the same year the reservoir gained 5,132 acre-feet and loss due to evaporation was 87,037 acre-feet. The inflow during the 1960 water year was 725,183 acre-feet, of which 334,910 acre-feet were intercepted and stored. Approximately 460,680 acre-feet of storage were withdrawn through the dam during the 1960 season. During the same year the reservoir gained 49,740 acre-feet and loss due to evaporation was 81,710 acre-feet.

The Sutherland Reservoir is an off-channel reservoir located about three miles south of Sutherland, Nebraska. It is owned and operated by the Platte Valley Public Power and Irrigation District. It was originally constructed to serve as a storage reservoir and obtains its water from the North River near Keystone, Nebraska. However, because of a seepage problem, a large part of its appropriation has been transferred to Kingsley Reservoir. It now serves primarily as a regulator, having a limited capacity of about 85,000 acre-feet. Since it serves as a regulator its content fluctuates a great deal during the year. Therefore, no analysis of its operation is made.

Harry Strunk Lake is an on stream reservoir which impounds natural flow accruing in the Medicine Creek basin above the dam located about eight miles northwest of Cambridge. It is owned and operated by the United States Bureau of Reclamation and was completed in 1949. It has a capacity of 39,230 acre-feet at the top of the irrigation pool and 90,920 acre-feet at the top of the flood control pool.

The Harlan County Reservoir is located immediately south of Alma on the Republican River. It is owned and operated by the United States Corps of Engineers and was completed in 1952. It provides storage water for irrigating lands in Nebraska and Kansas and has a capacity of 850,000 acre-feet, of which 500,000 acre-feet are for flood control. The capacity at the top of the irrigation pool is 350,000 acre-feet of which 150,340 acre-feet are for irrigation.

Swanson Lake is a reservoir located on the Republican River about three miles west of Trenton and was completed in 1953. It is owned and operated by the United States Bureau of Reclamation and has a capacity of 254,000 acre-feet of which 120,160 acre-feet are for irrigation and 133,840 acre-feet are for flood control.

The Enders Reservoir is located on the Frenchman River about eight miles southeast of Imperial and is owned and operated by the United States Bureau of Reclamation. It has a capacity of 74,520 acre-feet of which 44,480 acre-feet are for irrigation and 30,040 acre-feet are for flood control. It was completed in 1950.

The Box Butte Reservoir is located on the Niobrara River about nine miles north of Hemingford. It was constructed by the United States Bureau of Reclamation to provide water for the Mirage Flats Project, also constructed by the Bureau, the reservoir was completed in 1946 and the irrigation project in 1947. The reservoir and irrigation system is operated and maintained by the Mirage Flats Irrigation District. The reservoir has a capacity of 31,075 acre-feet, all of which is available for irrigation. During the 1959 irrigation season 19,920 acre-feet of storage water were diverted to the land irrigated and during the 1960 season 19,200 acre-feet of storage water were diverted.

The Oliver Reservoir is located on Lodgepole Creek about eight miles west of Kimball and is owned and operated by the Kimball Irrigation District. It originally had a capacity of 7,500 acre-feet, but through many years of use it has silted in and its capacity is now estimated to be about 5,600 acre-feet, all of which is available for irrigation. All tabulations in our records are still recorded on the basis of the original capacity of 7,500 acre-feet, since no sedimentation survey has been made. During the 1959 irrigation season 4,520 acre-feet of storage water were diverted to the District's land and 3,390 acre-feet of storage water were diverted in 1960.

The Bennett Reservoir is located on Lodgepole Creek about three miles northeast of Kimball. It is owned and operated by an individual and has a capacity of about 1,400 acre-feet, all of which is available for irrigation. During the 1959 irrigation season about 1,140 acre-feet of storage water were diverted to the land, and in 1960 about 1,230 acre-feet of storage water were diverted.

The Whitney Reservoir is an off-stream reservoir located about three miles west of Whitney and water is diverted into it from the White River through a wooden pipe line about eight miles long. It is owned and operated by the Whitney Irrigation District and has a capacity of 10,000 acre-feet, all of which is available for irrigation. During the 1959 irrigation season about 8,020 acre-feet of storage water were diverted to the land and in 1960 about 7,490 acre-feet were diverted.

Crescent Lake is a natural lake located in the Sand Hill region about 25 miles north of Oshkosh near the head waters of Blue Creek. The water in Crescent Lake, on a limited basis, is used to supplement the natural flow of canals diverting from Blue Creek. The maximum amount of water that can be taken from the lake is limited by the concrete floor in the outlet headgate. About 1,066 acre-feet of lake water were diverted into the canals during the 1959 season and about 490 acre-feet were diverted during the 1960 season.

**COMPARISON OF STORAGE IN RESERVOIRS**

Name of Reservoir	Capacity Top of Irrig. Pool Acre-feet	Maximum Storage				Carry Over Storage			
		1959		1960		Sept. 30, 1959		Sept. 30, 1960	
		Ac.Ft.	%Avg.	Ac.Ft.	%Avg.	Ac.Ft.	%Avg.	Ac.Ft.	%Avg.
Pathfinder	a 1,016,000	766,370	76	643,400	64	118,870	34	15,650	4.5
<sup>1</sup> Glendo	b 100,000	28,440	95	22,580	75	13,080	104	10,620	85
Lake C. W. McConaughy	c 2,000,000	1,652,700	121	1,595,600	116	1,227,400	112	1,102,800	101
Oliver	c 7,500	5,920	126	4,830	102	1,400	94	1,440	96
Bennett	d 1,400	1,210	109	1,230	112	70	1.4	0	0
Whitney	c 10,000	10,100	110	10,120	111	2,080	46	2,630	58
Crescent Lake	d 7,000	2,960	57	1,680	32	270	10	40	1.5
<sup>2</sup> Box Butte	e 31,075	27,200	101	25,530	96	7,310	59	5,000	40
<sup>2</sup> Enders	f 44,480	45,940	102	55,330	124	33,140	98	34,560	103
<sup>2</sup> Harry Strunk Lake	f 39,230	41,120	95	55,740	131	23,190	83	21,400	77
<sup>2</sup> Swanson Lake	g 120,160	122,600	109	146,330	130	67,310	101	75,400	113
<sup>2</sup> Harlan County	h 350,120	362,600	114	498,170	157	262,800	115	302,910	133

<sup>1</sup> Glendo maximum and carry over consists of Glendo Project water only and includes 12,060 acre-feet of dead storage which can be used for irrigation if necessary, by replacing temporarily with other water stored in Glendo.

<sup>2</sup> When maximum storage exceeds capacity of irrigation pool, it indicates water in the flood control pool.

**WATER ADMINISTRATION**

That section of the North Platte River above the Tri-State Dam is administered separately and without regard to any rights in the Platte River Basin below the Tri-State Dam. The Tri-State Dam is the diversion dam on the North Platte River for the Farmers Irrigation District, served by the Tri-State Canal. It is located about one mile east of the Wyoming-Nebraska State Line.

This method of administration has been in effect since October, 1945, when the U. S. Supreme Court handed down the decree allocating the natural flow of the North Platte River Basin from its headwaters in Colorado, through Wyoming, downstream to the Tri-State Dam. The decree did not deal with the administration of storage water nor did it require any natural flow to pass the Tri-State Dam. Therefore, no appropriators below the Tri-State Dam have a claim on natural flow developing above the dam, regardless of their priority. This section is administered on a joint basis, with the U. S. Bureau of Reclamation being fully responsible for the allocation of storage water, and Wyoming and Nebraska being fully responsible for the distribution of the available water, both storage and natural flow, to their respective canals according to their State laws, with all other features of administration being worked out co-operatively between the three parties.

In the section of the river between Whalen, Wyoming, and the Tri-State Dam, eight canals divert water for use on Nebraska lands. The Gering-Fort Laramie, Interstate and Northport Canals are government constructed projects. The other canals, Gering, Mitchell, Tri-State, Ramshorn and French, were all constructed by private groups. Ramshorn Canal diversions out of water arising in Wyoming are limited to 14 second-feet by the decree. The Gering-Fort Laramie, Interstate and French canals are used to irrigate lands in both Wyoming and Nebraska, while the others are used to irrigate only lands in Nebraska. All, except the Mitchell, Ramshorn and French Canals, have storage rights in the Pathfinder Reservoir in addition to natural flow rights.

The Glendo Reservoir was completed in the fall of 1957 and since that time Mitchell Canal has received its storage needs from that source. Glendo storage is also available to canals in Wyoming and Nebraska from Guernsey Dam to Lewellen that do not have other storage rights. Because of the availability of storage and the U. S. Supreme Court Decree handed down in 1945, the Department rarely experiences difficulty in administering the water above the Tri-State Dam. This was true during this biennium even though it was one of the driest consecutive two years on record and crop production in the area was excellent.

In connection with the Department's administration it should be pointed out that since (1941) the construction of reservoirs and additional hydro-electric plants between Lewellen and Kearney the demand for natural flow from the Platte River basin has been materially reduced. The usual priority date down to which canals were closed, prior to these developments was June 1, 1884, for short periods and for longer periods down to January 1, 1890, while at this time west of Sutherland it is February 2, 1894 and east of Sutherland to Cozad it is June 14, 1894, and from Cozad east it is September 16, 1929.

The time of closing canals and the duration varies from year to year, depending upon the natural flow supply, amount of rainfall and other climatic conditions, with the critical period being during July and August. However, many of the natural flow closing orders do not now adversely affect crop production. Since 1941 many of the appropriators affected have storage or ground-water available to supplement their natural flow deficiency. Because all streams in the Platte River Basin from the Wyoming-Nebraska and the Colorado-Nebraska State lines east to Kearney are over appropriated some canals are closed each year unless it is an abnormally wet year.

During the 1959 irrigation season the first closing orders were effective on July 14, when all canals in the North Platte River Basin between the Wyoming-Nebraska State line and Sutherland antedating April 12, 1894, were closed. Other closing and opening orders issued in this section were as follows:

On July 17 canals were closed antedating February 2, 1894.

On July 31 canals were closed antedating May 1, 1893.

On August 6 we opened all closed canals senior to February 2, 1894.

On August 30 we opened additional closed canals senior to April 12, 1894.

On September 9 we opened for the remainder of the year all canals still closed in this section.

During the 1959 irrigation season we first closed canals antedating January 23, 1894, east of Sutherland on the North Platte and the Platte Rivers and on the South Platte River east of Colorado-Nebraska State line on July 22 and opened them again for the rest of the season on September 5.

The pattern of closing and opening canals during the 1960 irrigation season in the Platte River Basin was comparable to that for 1959. For the section on the North Platte River and Platte River east of Sutherland and on the South Platte River east of the Colorado-Nebraska State line canals antedating January 23, 1895, were closed on July 21 and opened for the remainder of the season on September 15.

For the section in the North Platte River Basin from Sutherland west to the Nebraska-Wyoming State line canals antedating February 2, 1894, were closed to natural flow from July 1 to August 30, and those junior to January 20, 1892, were closed except for two days during the period July 16 to August 6 and those antedating October 9, 1890, were closed July 22 to July 30. Canals in this section junior to April 12, 1894, were closed on July 1 and opened for the remainder of the season on September 19.

The foregoing report on closing canals in the Platte River Basin during 1959 and 1960 clearly indicates that the natural flow water supply was acute during this biennium, probably the most acute on record for any two consecutive years. It also indicates that for the section in the North Platte River Basin west of Sutherland 1960 was more critical than 1959. It indicates further that during this biennium our administrative responsibilities were critical and were accomplished with considerable difficulty but with the least possible crop damage to the irrigators affected.

While Lodgepole Creek is a tributary stream located in the Platte River basin it must be administered separately from all others because of the South Platte River Compact between Nebraska and Colorado. Lodgepole Creek crosses the Colorado-Nebraska State Line before it reaches the South Platte and the Compact gives Nebraska full use of all the water in the creek to a division point about two miles above the State Line. Colorado has full use of all water flowing at or below the division point. Therefore, if Nebraska attempted to run water from Lodgepole Creek into the South Platte to serve Nebraska farmers on a priority basis it would be used by Colorado before it reached Nebraska users.

During dry periods Lodgepole Creek water in Nebraska is likewise administered separately in four sections, as follows: Wyoming-Nebraska State Line to Dix, Potter to Brownson, from about seven miles west of Sidney to the west edge of Sidney and from the east edge of Sidney to the Compact division point. This is for the reason that any minor flow in the creek requiring priority distribution goes underground before it will reappear in the stream at the upper end of each of the three sections involved. When there is enough water to flow from one section to the other there is enough water for all diversions and no distribution on a priority basis is required. The Department has tried on several occasions to get water from one section to another by closing canals, however it has been unable to do this, so rather than waste the water in attempting to do this the sections are administered separately.

In the upper section, the State Line to Dix, canals with priorities of April 15, 1899, or older get some natural flow during dry years, such as 1959 and 1960. The Oliver Reservoir located eight miles west of Kimball, owned and operated by the Kimball Irrigation District was full at the beginning of both of the 1959 and 1960

seasons, which provided an adequate supply of supplemental water to produce good crops in the District.

In the two intermediate short sections very little water is available, and for the most part it is used by the oldest right in the respective sections.

In the lower section east of Sidney during this biennium the creek would have been practically dry if it were not for two or three small springs and two or three places where city water supplies from wells were used for sewage disposal plants and wasted into the creek. The Department distributes this water to the oldest right in between the several places where the spring and waste water is discharged, since by tests we have determined that during a dry year the water will not travel downstream from one place of discharge to the other when junior intermediate canals are closed.

Therefore it is obvious that during dry years like 1959 and 1960 only a few of the oldest rights on Lodgepole Creek receive water during the critical summer period. The periods when canals were closed extended from July 1 to October 1 during both years of this biennium.

Strict administration is required on the Niobrara River from the Wyoming-Nebraska State Line to the diversion of the Mirage Flats Irrigation District located near Old Dunlap. The direct flow appropriation of the Mirage Flats Irrigation District permits a maximum rate of diversion of 158 second-feet with a priority of July 25, 1937. This far exceeds the summer flow in the river. Hence, it is necessary each year to close appropriations with priorities junior to July 25, 1937, in this river section when the District begins to divert water. During dry years there is insufficient water above the District's diversion to take care of the needs of all the seniors to the District. Because of good cooperation among these seniors it is rarely necessary for the Department to close any of them in favor of others because of their priority status. All of them do have recorders and it is necessary for the Department to make necessary measurements and adjustments so they can stay within their permitted rate of diversion. However, because of the location of the diversions and their cooperation with each other usually it is unnecessary to close any of the senior canals.

Moisture conditions in the Republican River Basin were generally favorable during both 1959 and 1960 so that no major administrative problems arose. The availability of storage water from the reservoirs in the basin for use by most of the water appropriators on the main streams and their principal tributaries made it possible for them to divert storage when natural flow was insufficient to supply their requirements.

The administrative work in the basin was handled satisfactorily by L. F. Zabel, Associate Hydrographer, assisted by two water

commissioners who were on duty from June through September each year.

Robert F. Bishop, Associate Hydrographer, with the assistance of six water commissioners who were on duty from June to September both years, very capably handled the water administration in the Loup River Basin. The work in that basin consisted mainly of regulating and recording the diversions by stream pumps in accordance with appropriations of record in this department and contracts for just compensation between the owners of such appropriations and the Loup River Public Power District.

As a result of the long pending suit in the U. S. District Court involving the Loup River Public Power District, the North Loup River Public Power and Irrigation District and the Middle Loup Public Power and Irrigation District, the Department made no attempt to regulate the irrigation diversions by the latter two districts. Shortly after the close of the 1960 water year a decision was handed down by the Court. In the decision, the Order to Show Cause entered in this case on May 21, 1955, was discharged and the parties were remitted to any appropriate court or courts or administrative bodies for presentation of the issues. The making of a decision in this case is a step forward in resolving the controversies among the districts which have been the source of litigation for many years. It appears that the administration of water in the basin can be carried out in a more orderly manner in the future as a result of this decision.

### HYDROGRAPHY

The cooperative stream gaging program in which the Department of Water Resources and the Surface Water Branch of the U. S. Geological Survey have participated on a fifty-fifty basis for many years was continued during the biennium with each participant expending approximately \$60,000 in 1959 and \$62,500 in 1960. As of October 1, 1960, there were 86 gaging stations maintained on the principal streams of the State under this program.

In addition to the gaging stations which are operated under the above cooperative program, seventy-two other stations were operated by the U. S. Geological Survey in cooperation with other agencies of the Department of the Interior, the Corps of Engineers, the Department of Agriculture and local districts.

The ten hydrographers and other personnel of this department, in addition to making the necessary measurements to support the State's share of cooperative stream gaging program, are responsible for measuring the numerous canal and pump diversions from the natural streams and servicing the 117 recording gages on canals when they are in operation.

### IRRIGATION WELLS

The registration of irrigation wells was one of substantial activity in the department during the biennium. A large number of old wells were registered during the first year of the biennium to comply with the provisions of the well registration act which required that all irrigation wells existing on September 20, 1957, should be registered on or before January 1, 1959. A statement of the total number of wells registered and the number registered during the biennium may be found in the statistical summary contained elsewhere in this report.

The experience gained by the department during the first three years of registering irrigation wells under the 1957 Act indicates that some minor improvements in the law will be desirable. To accomplish the improvements the department is recommending to the 1961 Legislature that the registration law be amended to require that the owners of all abandoned irrigation wells report them to the department and that all wells drilled to replace abandoned registered wells shall be registered with the department. However, no fee would be required to register such a replacement well. Another recommendation is that the registration of new wells shall be made in triplicate, so that one copy may be forwarded to the Conservation and Survey Division.

### INTERSTATE COMPACTS

On July 15, 1959, the officials of the States of Colorado, Kansas and Nebraska, at a meeting in Denver, Colorado, in consonance with the terms of the Republican River Compact, established the "Republican River Compact Administration," consisting of the said three officials, and adopted rules and regulations governing meetings of said Administration. The rules provide for a chairman to be elected for a term of one year at the annual meeting which shall be held in March or April of each year at the call of the chairman. The Director of Water Resources of Nebraska was elected chairman at the time of organization and was reelected at the 1960 Annual Meeting.

The principal activity of the Administration has been an undertaking to develop a formula to determine the virgin water supply of the Republican basin through an engineering committee designated "Committee on Procedure for Computation of Annual Virgin Water Supply." The committee which is composed of one engineer from each of the States has been aided in their deliberations by engineers from the U. S. Geological Survey, the U. S. Bureau of Reclamation, the Corps of Engineers and other State agencies, who are serving at the request of the members of the Administration and are rendering invaluable service.

Although the Republican River Compact was consummated in 1943, the consumptive use of water in none of the three basin

states has yet reached the limits permitted under the provisions of the Compact. The development of irrigation in the basin by the U. S. Bureau of Reclamation and by individuals is steadily increasing, however, and it is anticipated that within a few years careful administration of the Compact will be necessary.

Progress was made in the negotiation of compacts to apportion the waters of the Niobrara River between the States of Wyoming and Nebraska, and between the States of South Dakota and Nebraska. At the time of this report it appeared that the negotiations would be completed so that compacts could be signed by the Commissioners for the States and by the Federal Representatives, and be presented to the 1961 Legislatures of the signatory states and to the Congress for ratification and approval. The Congressional legislation giving consent to the States to enter into a Compact expires on August 5, 1961.

The Compact with Wyoming, as now drafted and essentially agreed to, applies only to that portion of the Niobrara River Basin west of Range 55 West of the 6th P. M. This is the area west of Agate, Nebraska. In addition to allocating the surface flows of the river and its tributaries in the compact area, the compacting states recognize that the future use of groundwater for irrigation in the basin may be a factor in the depletion of the surface flows of the river, and it provides that the two states, with the cooperation of the U. S. Geological Survey, shall undertake groundwater investigations in the state-line area. Such investigations shall be initiated within one year after the effective date of the Compact.

The Compact with South Dakota covers the areas drained by the interstate tributaries common to the two states and Ponca Creek. Basically, it provides that the waters of Minnechaduzza Creek, the Keya Paha River and Ponca Creek shall be administered on a priority basis, regardless of the state line. Each state will recognize the rights granted under the water appropriation laws of the other state. It does not appear that a definition or determination of the extent of the rights which may attach to Indian lands in South Dakota can be made. It is probable that any Compact that will be acceptable to the U. S. Department of Justice will provide that nothing in it shall be construed to affect the obligations of the United States to Indians, or to impair any rights or powers of the United States in the waters of the Interstate streams involved.

In June, 1960, the 86th Congress gave its consent to the States of Kansas and Nebraska to negotiate and enter into a Compact relating to the interests of said States in the waters of the Big Blue River and its tributaries. Brigadier General W. R. Shuler, Division Engineer, Missouri River Division, Corps of Engineer, Omaha, Nebraska, has been designated by the President to par-

ticipate in the negotiations with the Commissioners who are duly appointed to represent the two States. The Director of Water Resources has been appointed to serve as Commissioner for Nebraska, pursuant to authorizing legislation passed by the 1959 Legislature. It is planned to hold the organizational meeting of the Commission early in 1961.

### **NEW DEVELOPMENT**

Progress was made in the control and development of the state's water resources, mainly under plans developed by the U. S. Bureau of Reclamation, the Corps of Engineers and the Soil Conservation Service in collaboration with local organizations and state agencies.

#### **Republican River Basin**

The Meeker-Driftwood Canal system on the Republican River near Culbertson, which was completed in 1959 by the Bureau of Reclamation, was operated by the Frenchman-Cambridge Irrigation District in 1960. Service was available for 16,300 acres under this canal which receives supplemental storage water from the Swanson Lake Reservoir. With the foregoing acreage, a total of 38,500 acres could be irrigated in 1960 in the Frenchman-Cambridge Unit of the Missouri Basin Project, including approximately 12,400 acres of old lands under the Meeker and Culbertson canals which now have supplemental storage water service available to them from the Enders and Swanson Lake reservoirs.

The works of the Bostwick Irrigation District in Nebraska are completed, and 24,240 acres are currently irrigated or can be irrigated there from the Republican River and storage in the Harlan County Reservoir.

The work of enlarging and extending the Culbertson Canal which was resumed in 1958, was continued during the biennium. Scheduled for completion in 1961, the enlarged canal will supply water from the Frenchman River and Enders Reservoir to 11,500 acres of new lands in the H & R W Irrigation District, on table lands west of McCook, as well as the 9,600 acres in the Frenchman Valley Irrigation District which has long been irrigated with an inadequate direct flow supply.

Construction of the 88,400 acre-foot Red Willow Reservoir on Red Willow Creek north of McCook was started by the U. S. Bureau of Reclamation in July 1960. The reservoir, which is scheduled for completion in 1964, will provide storage water for 4,150 acres of new land along Red Willow Creek and along the north side of the Republican River Valley west of the City of Cambridge as well as to provide flood protection for lands in the creek valley and down river. With the addition of the Red Willow Dam to the already completed Enders, Trenton, Medicine

Creek and Harlan County dams, the possibility of major floods occurring in the Republican Valley downstream from Trenton will be virtually eliminated. Major tributaries in the Republican River Basin which are yet to be controlled by reservoirs are the Beaver and Sappa Creeks in Kansas and Nebraska and the Arikaree River in Colorado and Nebraska.

### **Loup River Basin**

The portion of the Sargent Unit which lies north of the Middle Loup River near Sargent was completed by the Bureau of Reclamation during the biennium. In 1960 water was diverted from the Middle Loup River through the Sargent Canal for the irrigation of some 8,000 acres of the 13,700-acre project. Operation of the system was assumed by the Sargent Irrigation District in 1959.

Construction on the Farwell Unit of the Middle Loup Division was initiated by the Bureau in August 1959 when work was started on the Sherman Dam on Oak Creek near Loup City. When completed, the Sherman Dam will provide a reservoir of 69,100 acre-feet capacity for storing the waters of the Middle Loup River. Water will be supplied to the reservoir through the Farwell Main Canal, the diversion point for which is located on the river about eight miles upstream from the town of Arcadia. The Farwell Main Canal, which was started in 1960, will carry direct flow diversions from the Middle Loup River through the Sherman Reservoir to the 52,000-acre Farwell Unit.

A feasibility report on the North Loup Division was submitted by the Commissioner of Reclamation in 1960 and it is scheduled to go to the Congress in 1961 for reauthorization. The report provides for the construction of facilities to irrigate 52,600 acres of land in the valleys of the North Loup and Main Loup Rivers, extending from Elyria to Fullerton in Valley, Greeley, Howard, and Nance Counties. The main features of the proposal are the 108,600 acre-foot Calamus Reservoir on the Calamus River, just upstream from the City of Burwell; the 22,000 acre-foot Davis Creek Reservoir southwest of Scotia and five principal canals. The Twin Loups Reclamation District and the Twin Loups Irrigation District have previously been organized in the area to develop this project and to assume the responsibilities of repayment of construction costs and the operation of the Unit.

The Bureau of Reclamation resumed investigations in the Cedar River Valley, a number of landowners in the area from Primrose to Fullerton having indicated an interest in the development of an irrigation project. It appears that a feasible project of some 29,000 acres, involving the construction of a reservoir on the Cedar River and necessary diversion canals, can be developed.

Preliminary studies of reservoir sites on the main Loup River between St. Paul and Genoa were initiated by the Loup River Public Power District and other downstream interests late in 1960. The proponents point to the flood control benefits that would accrue to lands and municipalities along the Loup River and along the Platte River below Columbus, while furnishing a regulated supply of water for the District's hydro-electric plants.

### **Platte River Basin**

Planning of the multiple-purpose Mid-State project was resumed by the U. S. Bureau of Reclamation early in 1960 in cooperation with the Nebraska Mid-State Reclamation District. The plan as thus far developed involves the irrigation of some 140,000 acres in the Platte Valley in Buffalo, Hall and Merrick Counties by the diversion of water from the Platte River near Lexington, with storage reservoirs along the north side of the valley. Legislation to authorize the proposed development as a unit of the Missouri Basin Project was introduced in the Congress in 1960.

### **Niobrara River Basin**

Although Federal funds were first made available for construction of the Ainsworth Unit in 1958, actual construction was not initiated until late in 1960, soon after the State Supreme Court upheld the validity of the organization of the Ainsworth Irrigation District and the permit to appropriate water granted to the district by this department. The department in 1959 had approved the application of the district to divert water from the Snake River for the irrigation of the Ainsworth lands following a hearing on objections filed by opponents of the project. The objectors, who claimed that the diversion of water from the Snake River at a point a few miles upstream from its confluence with the Niobrara River, for the irrigation of lands from which unused and return flows would return to the Niobrara River, would be contrary to the Nebraska water laws.

The Commissioner of Reclamation had elected not to proceed with the expenditure of the 1958 construction funds pending the decisions of the Supreme Court. Additional construction funds for the Ainsworth Unit were appropriated by the Congress in 1960 following the favorable court decisions and it is anticipated that construction will now proceed in an orderly manner.

The Ainsworth Unit involves the construction of the 69,000 acre-foot Merritt Reservoir on the Snake River, 53 miles of main canal heading at the Merritt Dam, more than 200 miles of laterals and three pumping plants along the canals. The estimated cost of the facilities which will serve some 34,000 acres of new lands is \$25,934,000, based on 1954 prices.

Increased local interest has recently been indicated in the O'Neill Unit which was proposed in the Niobrara Basin Report released by the U. S. Bureau of Reclamation in 1953. A feasibility report on this unit of some 80,000 acres is scheduled for completion by the end of 1961. Features of this unit apparently will be a storage dam on the Niobrara River north of Ainsworth from which a canal will be constructed to serve the lands north and west of the town of O'Neill.

Other potential authorized units in the basin which may be investigated in further detail in the future are the Lavaca Flats Unit of 2,300 acres and the Mirage Flats Extension Unit of 5,900 acres.

### **Blue River Basin**

Renewed interest has been displayed by landowners in the basin of the Little Blue River where a reconnaissance report of the Bureau of Reclamation has indicated that the irrigation of an 18,000 acre area near Ruskin and a 6,000 acre area near Gilead may be feasible with a storage reservoir near Deweese and two diversion systems from the Little Blue River to serve the two areas. Initial steps in the organization of an irrigation district have been taken.

### **The Small Watershed Program**

Progress was accelerated in the field of watershed protection and flood prevention under Public Law 566. This acceleration has come about because of several reasons. During the 1959-1961 biennium a fund of about \$100,000 has been available through increased state appropriations to the State Soil and Water Conservation Committee to enable that agency to augment the survey party of the Soil Conservation Service so that the equivalent of three field parties are now engaged in field surveys and preparing watershed work plans. Additional funds appropriated by the 1959 Legislature have enabled the Committee to employ two assistant executive secretaries who have devoted much of their time to helping local groups prepare watershed applications and organize districts.

The 1957 Legislature permitted the formation of watershed conservancy districts in small watersheds. Such a district has the power to make a levy of two mills on all tangible property in the district. The money derived from the levy has proven invaluable for purchasing easements and paying other local costs connected with the structures built with Department of Agriculture funds.

Up to the time of this report a total of 37 applications for assistance in watershed planning had been filed. Of this total 35 have been approved for planning by the State Committee, 18 have been assigned planning priorities. Planning has been completed on 13 watersheds, 3 are under construction and 2 applications have been disapproved.

Coordination of flood control and watershed protection planning by the Corps of Engineers and the Soil Conservation Service in the Gering Valley in western Nebraska and in the Papillion Creek watershed in eastern Nebraska is progressing satisfactorily. It appears that feasible plans for the effective control of disastrous floods in these troublesome areas will be a reality in the very near future.

### STATISTICAL SUMMARY

The following is a summary of the statistical record for the biennium ending September 30, 1960.

Applications for water appropriations .....	219	
Appropriations canceled .....	479	
Applications dismissed .....	6	
Irrigation wells registered October 1, 1958 to October 1, 1960 ..	6,299	
Total irrigation wells registered .....	23,614	
Hearings held Re: Water appropriations .....	110	
Hearings held Re: Rural Public Power Districts .....	12	
Relocation petitions .....	10	
Deeds recorded (involving 130 appropriations) .....	98	
Reports of field investigations .....	243	
Maps and Plans .....	400	
Stream measurements .....	9,023	
Canal measurements .....	7,453	
Stream gaging stations with recording gages .....	146	
Stream gaging stations without recording gages .....	30	
Canal gaging stations with recording gages .....	117	
Fees collected covering:		
Applications for surface water, power leases, deeds, petitions and copying records .....	47,629.02	
Fees collected covering:		
Registration of irrigation wells .....	47,587.50	
Copying records .....	39.30	47,626.80
		<hr/>
Total .....		\$95,255.82

## **COURT DECISIONS**

**THIS PAGE INTENTIONALLY LEFT BLANK**

IN RE APPLICATION, AINSWORTH IRRIGATION DISTRICT

V.

HARMS

34616

Filed April 8, 1960

The Department of Water Resources has exclusive original jurisdiction to hear and adjudicate all matters pertaining to water rights, appropriations, and priorities for the use of public waters of this state for irrigation.

Heard before Carter, Messmore, Yeager, Chappell, Wenke, and Boslaugh, JJ.

CHAPPELL, J.

On September 25, 1958, plaintiff, Ainsworth Irrigation District, filed a petition in the district court for Brown County, seeking approval and confirmation of its organization as an irrigation district, and approval and confirmation of its contract with the United States for construction of the Ainsworth unit of the Missouri River Basin project, together with operation and maintenance of certain distribution and drainage works for the irrigation of lands within the district and for the delivery of water from such works by employment of a part of the waters of the Snake River, a tributary of the Niobrara River. The first nine paragraphs of plaintiff's petition specifically set forth at length the procedure used in organizing the district, supported by exhibits attached to and made a part of plaintiff's petition, which appear in the bill of exceptions as exhibit A through I. Paragraph 10 of plaintiff's petition set forth at length the time, mode, and manner of executing its contract with the United States, together with its material terms and contents. Also, a copy of such contract, exhibit J, which appears in the bill of exceptions as exhibit 3, was attached to and made a part of plaintiff's petition.

Plaintiff prayed for the fixing of a time for hearing on its petition; the giving of notice, as required by law; and that upon such hearing, an order be rendered approving and confirming the organization of the district, approving and confirming the proceedings of plaintiff's board of directors leading up to and including the making of its contract with the United States, and approving and confirming the validity of its terms and the execution thereof.

Certain motions were filed by the parties and were overruled, but as we view it, the substance thereof is unimportant to ultimate decision herein.

Be that as it may, nine named defendants answered plaintiff's petition, admitting the allegations of fact contained in the first nine

paragraphs of plaintiff's petition whereby they admitted that plaintiff had taken all of the procedural steps required by law to organize as an irrigation district. Defendants' answer denied the allegations of fact set forth in paragraph 10 of plaintiff's petition, but admitted that plaintiff district, by its president and secretary, executed plaintiff's contract with the United States, a copy of which was identified as exhibit J by plaintiff's petition. Defendants then respectively set forth the description and location of lands owned by and in the possession of each of them and substantially alleged in paragraphs 6, 7, 8, 9, 10, 12, and 13 that the water intended to be appropriated for use by plaintiff would be diverted and appropriated from the Snake River and would not be returned thereto or to the Missouri River, contrary to and in derogation of the statutes, laws, and public policy of this state. Defendants also alleged that plaintiff's petition did not state a cause of action, and prayed for denial of the relief sought by plaintiff and a dismissal of plaintiff's petition. In that connection, this is a proper place to say that plaintiff's petition did state a cause of action under the provisions of sections 46-1,151 and 46-1,152, R. R. S. 1943, and other related sections hereinafter mentioned.

Plaintiff then filed a motion in the alternative to strike defendants' entire answer, or to strike paragraphs 6, 7, 8, 9, 10, 12, and 13 therefrom, upon the ground that the allegations therein were not a defense to plaintiff's action because the Department of Water Resources had exclusive original jurisdiction over all matters pertaining to water rights and the appropriation of water in such cases; that such defense was redundant and irrelevant to the object of plaintiff's action; and that paragraph 6 of plaintiff's contract with the United States specifically provided that: "The right to the beneficial use of the District water supply shall be governed by the Federal Reclamation Laws and the laws of the State of Nebraska, as the same may at any time apply to this contract; \* \* \*." In that connection, the trial court overruled plaintiff's motion to strike defendants' entire answer, but sustained plaintiff's motion to strike paragraphs 6, 7, 8, 9, 10, 12, and 13 from defendants' answer. Plaintiff's reply was a general denial.

Thereafter, a hearing was held upon the merits, and a judgment was rendered which approved and confirmed the organization of plaintiff as an irrigation district and approved and confirmed plaintiff's contract with the United States as prayed by Plaintiff. Defendants' motion for new trial was overruled, and they appealed, assigning, as far as important here, that the trial court erred in striking the aforesaid paragraphs from their answer, and in excluding evidence by overruling defendants' offer to prove the facts alleged therein. We do not sustain defendants' assignment.

Defendants admit, and the record establishes as well, that plaintiff district was legally formed and organized by taking every procedural step required by law, and that plaintiff's contract with

the United States was duly executed by the parties in every respect as required by law. In that connection, as stated in the record by defendants' counsel during the trial: "We are not making any objection to the interpretation of the language, or the various items in the contract, or the particular wording in this contract, Exhibit 3; our contention is that the entire Exhibit 3 is void and cannot be confirmed by the Court, because of its illegal nature," because it intends to appropriate and employ a "diversion of water from the Snake River into the canal for use in this district." Defendants' counsel further stated: "\* \* \* we have admitted the proceedings that go to make up the district; but the district is illegally formed because it was formed for an unlawful and void purpose." Defendants agreed with the trial court that: "As far as these defendants are concerned" the whole issue was "the right of this district to divert this water over these various water sheds," as named and claimed by defendants.

Thus, the sole question presented in this case, as we view it, is whether or not the trial court had original jurisdiction to hear and adjudicate the issue of plaintiff's water rights and its right to an appropriation and employment of water for irrigation purposes from the Snake River. We conclude that the trial court did not have such jurisdiction, but that the Department of Water Resources had exclusive original jurisdiction, acting as a quasi-judicial body, to hear, determine, and adjudicate plaintiff's water rights for irrigation and its appropriation rights and priorities, if any.

This action is a special proceeding in rem in the district court, as authorized by sections 46-1,151 and 46-1,152, R. R. S. 1943, and other related sections, 46-1,102 and 46-1,106, R. R. S. 1943. In that connection, sections 46-1,151, R. R. S. 1943, authorizes the "board of directors of any irrigation district heretofore or hereafter organized" and "before or after the making of any contract with the United States or others," to "commence a special proceeding in the district court of the state, in and by which the proceedings of such board and of such district leading up to or including the making of any such contract, and the validity of any of the terms thereof \* \* \* or the taking of any particular steps or action, shall be judicially examined, approved and confirmed, or disapproved and disaffirmed."

Section 46-1,152, R. R. S. 1943, provides the practice and procedure for such judicial determination, and recites that: "The court may approve and confirm such proceedings in part and disapprove and declare illegal or invalid other and subsequent parts of the proceedings, and insofar as possible the court shall remedy and cure all defects in such proceedings."

The trial court herein approved and confirmed plaintiff's contract with the United States, but ruled in effect during the course of the proceedings that plaintiff's right to an appropriation, and use

of water by plaintiff for irrigation purposes, and the issue of defendants' claimed unlawful diversion of water for irrigation from the Snake River, was within the exclusive original jurisdiction of the Department of Water Resources. In that connection, such department was created by section 81-101, R. R. S. 1943. Section 46-705, R. S. Supp., 1959, effective September 20, 1957, transferred to such department all powers and duties with regard to water rights for irrigation theretofore imposed by law upon the Department of Roads and Irrigation.

In such respect, section 46-209, R. S. Supp., 1959, effective September 20, 1957, provides in part: "The Department of Water Resources is given jurisdiction over all matters pertaining to water rights for irrigation, power or other useful purposes, and drainage, except as such jurisdiction is specifically limited by statute. Such department shall adopt rules governing matters coming before it. It may refuse to allow any water to be used by claimants until their rights have been determined and made of record. It may request information relative to irrigation \* \* \* from any and all \* \* \* irrigation \* \* \* officers and from any other person or persons. It shall have public hearings on complaints, petitions, or applications in connection with any of the above matters. Such hearings may be had at the time and place designated by the department. The department shall have power to certify to official acts, compel attendance of witnesses, take testimony by deposition as in suits at law, to examine books, papers, documents, and records of any \* \* \* party, or parties interested in any of the matters hereinbefore mentioned, or have such examinations made by its qualified representative, and shall make and preserve a true and complete transcript of its proceedings and hearings. Upon any hearing, the department shall receive any evidence relevant to the matter under investigation and the burden of proof shall be upon the person making the complaint, petition, and application. After such hearing and investigation, the department shall render a decision in the premises in writing and shall issue such order or orders duly certified as it may deem necessary." In that connection, and contrary to defendants' contention, we are cited no statute or authority, and we have found none, which limited the exclusive original jurisdiction of the Department of Water Resources with relation to plaintiff's water rights and appropriation in the case at bar.

Section 46-210, R. R. S. 1943, provides for an appeal from final orders so rendered by the Department of Water Resources directly to this court. In *Cozad Ditch Co. v. Central Nebraska Public Power & Irr. Dist.*, 132 Neb. 547, 272 N. W. 560, citing authorities, this court said: "The existence of a final order (made and rendered by the Department of Roads and Irrigation, now the Department of Water Resources) is essential and a prerequisite to review in this court."

Defendants relied upon *Osterman v. Central Nebraska Public Power & Irr. Dist.*, 131 Neb. 356, 268 N. W. 334, to support their contention that the trial court had original jurisdiction to determine plaintiff's water rights and appropriation therefor, together with defendant's alleged issue of diversion. That opinion is entirely distinguishable, and, as a matter of fact, the very first paragraph thereof obliterates defendants' contention wherein it is pointed out: "This is an appeal to this court in a special statutory proceeding before the department of roads and irrigation" wherein "The final orders entered by that department" were "here sought to be reviewed \* \* \*." Also, in a second appearance of *Osterman v. Central Nebraska Public Power & Irr. Dist.*, 133 Neb. 606, 276 N. W. 398, this court said: "The litigation was instituted by proceedings before that public tribunal, the forum of original jurisdiction."

As early as *Castle Rock Irrigation Canal & Water Power Co. v. Jurisch*, 67 Neb. 377, 93 N. W. 690, this court said: "Thus the control of the waters of the state is provided for, and a state board established with exclusive original jurisdiction to apportion the waters of the state to the citizens thereof for beneficial purposes." That opinion also held that an applicant for the appropriation of waters of the state for irrigation, cannot prosecute the work and condemn a right-of-way for that purpose until he has a permit from the State Board of Irrigation to divert the water of the state to specific lands described in his application.

In *Kirk v. State Board of Irrigation*, 90 Neb. 627, 134 N. W. 167, this court held: "In this state, the water of running streams is publici juris; its beneficial use belongs to the public and is controlled by the state in its sovereign capacity."

In *Frenchman Valley Irr. Dist. v. Smith*, 167 Neb. 78, 91 N. W. 2d 415, a special proceeding comparable with that at bar, this court held: "By statute, the board of directors of any irrigation district heretofore or hereafter organized may, in its discretion, before or after making any contract with the United States of America, or the taking of any particular steps or action, commence a special proceeding in the district court of the state, in and by which the proceedings of such board and of such district leading up to or including the making of any such contract, and the validity of the terms thereof, or the taking of any particular steps or action, shall be judicially examined, approved, and confirmed, or disapproved and disaffirmed.

"By statute, the United States of America and every person intending to appropriate any of the public waters of the state shall, before commencing the construction, enlargement, or extension of any works for such purpose, performing any work in connection with the same, or taking any water from any constructed works, make application to the Department of Roads and Irrigation for a permit to make such appropriation."

As said in *In re Claim Affidavit of Parsons*, 148 Neb. 239, 27 N. W. 2d 190, citing authorities: "It is well settled by the decisions of this court that the Department of Roads and Irrigation has jurisdiction to hear, and determine, and make adjudication upon irrigation appropriation rights and priorities, and in the absence of an appeal as provided by law, the orders made in a proper proceeding in reference thereto are final and binding upon the parties." This and other courts have so concluded in other cases too numerous to cite.

As recently as *North Loup River Public Power & Irr. Dist. v. Loup River Public Power Dist.*, 162 Neb. 22, 74 N. W. 2d 863, we said: It is clearly recognized that the department has authority, granted by statute, to adjudicate water rights in this state. It is invested with certain quasi judicial powers which have application only to the granting and cancellation of appropriation rights and priorities. *State ex rel. Cary v. Cochran*, 138 Neb. 163, 292 N. W. 239; *Loup River Public Power Dist. v. North Loup River Public Power & Irr. Dist.*, 142 Neb. 141, 5 N. W. 2d 240. The approval of an application for an appropriation of public waters under section 46-235, R. R. S. 1943, is an exercise of the quasi judicial powers of the department. It will be noted that under the foregoing section of the statute the department, upon examination of the application, may endorse its approval 'for a less period of time for perfecting the proposed appropriation, or for a less amount of water, or for a less amount of land than applied for.' An aggrieved applicant is given an opportunity to be heard by the department, and the further right to appeal to this court from an adverse decision. In *Loup River Public Power Dist. v. North Loup River Public Power & Irr. Dist.*, supra, we said: 'Under the provisions of section 81-6317, Comp. St. 1929, the department may approve the application for an appropriation of public waters in an amount less than that applied for. If the applicant be dissatisfied, the remedy is by appeal to the supreme court, and if he fails to appeal, the appropriation as made is final.' Otherwise stated, unless an appeal is taken from the adverse order of the department, the decision of the department is final and the issues finally adjudicated."

In that connection, section 46-226, R. R. S. 1943, provides that: "The Department of Roads and Irrigation (now the Department of Water Resources) shall make proper arrangements for the determination of priorities of right to use the public waters of the state, and determine the same. The method of determining the priority and amount of appropriation shall be fixed by the department."

Also, section 46-233, R. S. Supp., 1959, effective September 20, 1957, provides that: "(1) The United States of America and every person hereafter intending to appropriate any of the public waters of the State of Nebraska shall before (a) commencing the con-

struction, enlargement, or extension of any works for such purpose, (b) performing any work in connection with the same, or (c) taking any water from any constructed works, make an application to the Department of Water Resources for a permit to make such appropriation \* \* \*. (3) Upon receipt of the application required by the provisions of subsection (1) of this section and containing the information set forth in subsection (2) of this section, the department shall (a) make a record of the receipt of such application, (b) cause the same to be recorded in its office, and (c) make a careful examination of the application to ascertain whether it sets forth all the facts necessary to enable the department to determine the nature and amount of the proposed appropriation."

Further, section 46-238, R. S. Supp., 1959, effective September 20, 1957, provides for the time within which the construction of irrigation works shall commence after approval of the application for water for irrigation purposes by the Department of Water Resources has been obtained. Such section also provides: "Any application for an appropriative right which is deficient by reason of part failure to comply with any of the requirements of sections 46-233 and 46-238 for the perfection of an appropriative right, which application has not been dismissed or denied, is also hereby ratified and confirmed; unless, within one year from September 20, 1957, a petition to vacate such an order granting an extension of time, or a petition to forfeit, cancel or otherwise invalidate such an application for an appropriative right, shall have been filed with the department by a person affected adversely thereby."

Thus, although the organization of plaintiff district, and its contract with the United States have been approved and confirmed by the district court as authorized by statutes heretofore cited, plaintiff still has no water rights or authority to appropriate or use any water for irrigation, or to prosecute the work in connection therewith until the Department of Water Resources has adjudicated such rights. In other words, the approval and confirmation of plaintiff's organization as an irrigation district and its contract with the United States could neither give nor deprive plaintiff of any water rights or appropriation of water for irrigation purposes because the Department of Water Resources had exclusive original jurisdiction of such matters. In that connection, the defense pleaded in paragraphs 6, 7, 8, 9, 10, 12, and 13, which were stricken from defendants' answer, was entirely redundant and irrelevant to the object of the special proceedings at bar. Such paragraphs were properly stricken, and if any evidence was offered by defendants in support thereof, it was properly refused admission.

In this case, the Department of Water Resources had exclusive original jurisdiction "over all matters pertaining to water rights for irrigation," which included plaintiff's right to water for irriga-

tion and an appropriation therefor, together with the issue of diversion claimed by defendants. As a matter of fact, such issues were ultimately presented and finally determined by special proceedings before the Department of Water Resources, and defendants have appealed therefrom in case No. 34747, decided this day. Ainsworth Irr. Dist. v. Bejot, post p. -----, ----- N. W. 2d -----.

For reason heretofore stated, we conclude that the judgment rendered herein should be and hereby is affirmed. All costs are taxed to defendants.

**AFFIRMED.**

IN RE APPLICATION, AINSWORTH IRRIGATION  
DISTRICT

V.

BEJOT

34747

Filed April 8, 1960.

1. A litigant who knowingly and deliberately assumes a particular position in a judicial proceeding is generally estopped to take a position inconsistent therewith to the prejudice of an adverse party.

2. On appeal to this court from an order of the Department of Water Resources, the primary questions to be determined are generally whether such department acted within the scope of its authority and whether its findings and order complained of are supported by competent evidence or are unreasonable and arbitrary.

3. Where the general intent of the Legislature may be readily ascertained, yet the language used in a statute gives room for doubt or uncertainty as to its application, courts and administrative tribunals such as the Department of Water Resources may resort to historical facts or general information to aid them in interpreting its provisions.

4. The construction of a statute of doubtful meaning given it by those whose duty it is to enforce it, and which construction the Legislature has by its continued noninterference for a number of years acquiesced in, will be approved, unless as thus construed it contravenes some provision of the Constitution, or is clearly wrong.

5. Long continued practical construction of a statute by the officers charged by law with its enforcement is entitled to considerable weight in interpreting that law.

6. When a statute is ambiguous or susceptible of two constructions, one of which creates absurdities, unreasonableness, or unequal operation and the other of which avoids such a result, the latter should be adopted.

7. Section 46-206, R. R. S. 1943, deals primarily with the limitation of the amount of water that may be appropriated and taken from rivers or streams more than 100 feet wide, and section 46-265, R. R. S. 1943, deals with the return of unused water transported in irrigation ditches or canals by the owner or owners thereof in order to prevent waste.

8. Such sections are not in conflict if the water of the river or stream from which appropriated and taken is transported by

irrigation ditches or canals to lands in the same basin or watershed and the unused water is returned into a river or stream in the same basin or watershed where it naturally would have flowed in any event but for the appropriation and taking.

Heard before Carter, Messmore, Yeager, Chappell, Wenke, and Boslaugh, JJ.

CHAPPELL, J.

This appeal involves an application of Ainsworth Irrigation District, hereinafter called plaintiff, seeking an appropriation of water from the Snake River for irrigation purposes. Such "Application No. 5218, Water Division No. 2-C" was filed with the Department of Roads and Irrigation, now the Department of Water Resources, on March 26, 1953, by one Vern P. Lindholm, as authorized agent for the benefit of plaintiff as named therein, in order to preserve a priority date for plaintiff pending entire and proper completion of its organization on August 10, 1953, after which time Vern P. Lindholm admittedly assigned said application to plaintiff. In form and substance the application conformed with the requirements of section 46-233, R. R. S. 1943, now section 46-233, R. S. Supp., 1959, as amended and effective September 20, 1957. For approval and confirmation of plaintiff's organization as an irrigation district and its contract with the United States, see *Ainsworth Irr. Dist. v. Harms*, ante p. \_\_\_\_\_, \_\_\_\_\_ N. W. 2d \_\_\_\_\_.

On March 30, 1955, five named objectors, only one of whom appears as objector in this proceeding but who were all represented by the same counsel as appear herein, filed a motion with the department requesting it to withdraw "Application No. 5218, Water Division No. 2-C. Ainsworth Irrigation District \* \* \* filed \* \* \* on March 26, 1953," and return it to said district because it contained a request "for a trans-watershed diversion of the waters of the Snake River \* \* \* beyond the authority and jurisdiction of the Department of Roads and Irrigation \* \* \* to grant \* \* \* and that in the event the request and motion is denied that the above-named parties be granted sufficient time to file objections to matters raised in the application for the purpose of making up issues to be determined by evidence adduced at a hearing on the merits of the application." After notice, an informal conference was held with relation thereto on April 18, 1955, in the office of the department by objectors' counsel, several other attorneys, interested parties, and the State Engineer. Thereafter, on May 3, 1955, the State Engineer wrote objectors' counsel, saying in part: "As you know, Application 5218 was filed by the Ainsworth Irrigation District on March 26, 1953, and it has been pending since that date. This application is for a permit to appropriate the waters of the State of Nebraska for the irrigation of the lands of the district by means of a canal and distribution

system to be constructed by the U. S. Bureau of Reclamation when funds are appropriated for that purpose.

"We do not feel that it would be proper procedure for this department to withdraw Application 5218 from our files and return it to the Ainsworth Irrigation District at this time, and we are not complying with the request to do so in Paragraph A of the motion and request.

"The parties named in your motion and request will be given notice before any action is taken on Application 5218 and ample time for filing objections will be granted as requested in Paragraph C of the motion and request."

In that connection, section 46-238, R. S. Supp., 1959, effective September 20, 1957, provides in part: "Any application for an appropriative right which is deficient by reason of past failure to comply with any of the requirements of sections 46-233 and 46-238 for the perfection of an appropriative right, which application has not been dismissed or denied, is also hereby ratified and confirmed; unless, within one year from September 20, 1957, a petition \* \* \* to forfeit, cancel or otherwise invalidate such an application for an appropriative right, shall have been filed with the department by a person affected adversely thereby." Admittedly, no such petition was ever so filed by defendants herein or any of them with the Department of Water Resources, and no question was raised regarding validity of plaintiff's application except upon the ground aforesaid until July 7, 1959.

On July 7, 1959, objections to plaintiff's application were filed by nine named objectors, hereinafter called defendants. One of such objections was that plaintiff's application was null and void because it was filed in the name of the Ainsworth Irrigation District before its organization was completed. We believe that this is the proper place to dispose of that objection. In that connection, plaintiff has at all times regarded and treated Application No. 5218 as its own, and has at all times accepted the benefits and obligations thereof, as it had a right to do. See, 1 Fletcher, *Cyclopedia Corporations* (Perm. Ed.), s. 207, p. 681; 13 Am. Jur., *Corporations*, s. 102, p. 246, s. 103, p. 247, citing numerous authorities from this and other jurisdictions. From the time of filing the application on March 26, 1953, until July 7, 1959, defendants treated the application as that of plaintiff, except to claim on the latter date that it was invalid only because of alleged "trans-watershed diversion." Plaintiff and the department as well were thus led by defendants to believe and assume, until July 7, 1959, that the application was that of plaintiff, and that defendants claimed invalidity only because of alleged "trans-watershed diversion." Also, defendants had ample notice and opportunity to file a petition, as provided by section 46-238, R. S. Supp. 1959, and thus attack validity of the application, but they ad-

mittedly failed to do so. We conclude that they are not now in any position to claim that the application was void because it was filed in the name of the Ainsworth Irrigation District before its organization had been completed.

As recently as *Chicago, B. & Q. R. R. Co. v. State Board of Equalization & Assessment*, ante p. 77, ..... N. W. 2d ....., citing numerous authorities, this court held: "A litigant who knowingly and deliberately assumes a particular position in a judicial proceeding is generally estopped to take a position inconsistent therewith to the prejudice of an adverse party."

In defendants' objections, one defendant, Harold Harms, simply alleged that he was the owner in possession of described lands in Cherry County. In that connection, the record discloses that such lands do not abut on the Snake River and are outside the irrigation district, but will be crossed in part by plaintiff's proposed irrigation canal. Another defendant, Garret O. Swanson, simply alleged that he was the owner in possession of described lands which abut upon the Snake River. In that respect, the record discloses that such lands are outside the irrigation district, but that 40 acres owned by him abut upon the Snake River some distance above plaintiff's proposed dam and reservoir area, and that he has a one-fourth interest in other lands nearby. The remaining seven defendants alleged that they were owners in possession of described lands which total only 1,213 acres, representing 3.3 percent of the total area within the district. Of course, they would ordinarily be subject to the burden of water and the plaintiff's contract with the United States, appearing in this record and referred to in *Ainsworth Irr. Dist. v. Harms*, ante p. ....

In that connection, plaintiff argued that none of defendants had any right to appear and object to plaintiff's application or appeal to this court, because they were not legally affected and had no legal interest in this proceeding for an appropriation. At least six defendants, who admittedly owned land within the district, we believe would be legally affected by the appropriation and had a legal interest in this in rem proceeding which plaintiff would be required to prosecute and establish before the Department of Water Resources to obtain an appropriation in any event, whether or not anyone objected. See, *Ainsworth Irr. Dist. v. Harms*, ante p. .... We conclude that such six defendants had a right to object to plaintiff's application and to appeal to this court. However, whether or not defendants Harms and Swanson would be legally affected, or had a legal interest which would entitle them to object to plaintiff's application and appeal to this court, we need not decide in this proceeding in order to dispose of the case under the circumstances presented herein.

As far as important here, defendants' other objections were in substance as follows: (1) That the Department of Water Resources

was without authority to approve plaintiff's application because the proposal involved the unlawful diversion of water from the Snake River and transportation thereof in a canal across the watersheds of Gordon Creek and several other named creeks before it reaches the lands in the irrigation district from whence the unused waters would run into the Niobrara River, in violation of section 46-265, R. R. S. 1943; (2) that the proposed diversion of water was unlawful under the provisions of section 46-206, R. R. S. 1943, because the width of the Snake River at point of diversion of plaintiff's canal is less than 100 feet; and (3) that approval of plaintiff's application would be detrimental to the public welfare and deprive defendants of equal protection of the laws and of property without due process of law. Defendants prayed for a denial and dismissal of plaintiff's application.

On July 10, 1959, plaintiff filed an answer which traversed defendants' objections; and prayed for a denial of said objections and for a granting of plaintiff's application. Defendants' reply, filed July 15, 1959, was in the nature of a general denial. A full and final hearing was held by the Director of Water Resources from July 21 to July 23, 1959, whereat the parties adduced evidence and thereafter filed briefs. Subsequently, on September 4, 1959, orders were rendered by the department overruling defendants' objections and approving plaintiff's application.

The order overruling defendants' objections found and adjudged substantially as follows: (1) That if Application No. 5218 was deficient when filed by reason of nonexistence of Ainsworth Irrigation District, it was validated by Vern P. Lindholm's assignment to plaintiff, and that the application became ratified and confirmed under the provisions of section 46-238, R. R. S. 1943 (now section 46-238, R. S. Supp., 1959); (2) that because waters of the Snake River discharged into the Niobrara River, and substantial portions thereof will continue to do so when diversions are made for the proposed Ainsworth project, and the Niobrara River is essentially the same stream as the Snake River, and also because both streams are a part of the same river basin, the diversion as proposed by plaintiff's application will not be a violation of sections 46-206 and 46-265, R. R. S. 1943, as interpreted by the Supreme Court of this state, and as they have been administratively interpreted by the department and its predecessors; and (3) that the granting of a permit to use waters of the Snake River under plaintiff's application will not be detrimental to the public welfare.

The order approving plaintiff's application and certifying approval thereof by the department, as provided in section 46-235, R. R. S. 1943, was made subject to certain limitations and conditions. As far as important here, they were in substances as follows: That the source of the appropriation was the Snake River; that the water appropriated should be used for irrigation purposes only; that priority date of the appropriation was March 26, 1953; that on or

before March 4, 1960, plaintiff should file a map in the office of the department as provided by section 46-237, R. R. S. 1943, and in accordance with rules and regulations of the department; provided that work of construction should begin on or before March 4, 1960, and be prosecuted to completion as provided in section 46-238, R. R. S. 1943 (now section 46-238, R. S. Supp., 1959), unless temporarily interrupted by some unavoidable and natural cause; fixed a time for completing work of construction as November 30, 1970; limited the amount of plaintiff's appropriation to one-seventieth of a cubic foot of water per second of time for each acre of land to which water is actually and usefully applied on or before October 31, 1975; provided that the department may require installation of a measuring device as provided by section 46-256, R. R. S. 1943; provided that the rights of owners of land bordering on streams in Water Division No. 2-C to use water for domestic purposes, including the watering of livestock, must be respected; provided that the prior rights of all persons who, by compliance with the laws of Nebraska, have acquired the right to use the waters of the natural streams of the state, must not be interfered with by the use of water under this permit; recited that the record shows that there are periods during some years when the supply of water in the Niobrara River Basin is not sufficient to meet the requirements of all those having appropriations for its use, therefore applicant is given notice that it may be denied the use of water during times of scarcity; and that said "Section 6, Article XV, Constitution of Nebraska, 1920, and Sections 70-668 and 70-669, Reissue Revised Statutes of Nebraska, 1943, govern the use of water, and provide that no inferior right to the use of the waters of this State shall be acquired by a superior right without just compensation therefor to the inferior user with prior rights." Thereafter defendants' motion for rehearing was overruled and they appealed to this court, assigning in substance: (1) That the findings and determination of the department were contrary to the application, evidence, and law; and (2) that defendants were denied due process and equal protection of the law. We do not sustain defendants' assignments.

With regard to defendants' last assignment, they make no contention that the irrigation statutes and laws deny defendants due process or equal protection. However, citing and quoting from 12 Am. Jur., Constitutional Law, s. 566, p. 257, defendants contend that the department in its administration of the law has made its own law by administrative fiat, and thereby discriminated against defendants and denied them equal protection of the law by refusing to give them protection on a parity with that afforded objectors in *Osterman v. Central Nebraska Public Power & Irr. Dist.*, 131 Neb. 356, 268 N. W. 334, upon which defendants primarily rely.

In that opinion, this court concluded that under the established policy of this state, water for irrigation purposes taken from the Platte River or its tributaries could not be lawfully diverted over

and beyond the southern watershed of that stream and applied to lands situate beyond and without the basin of the Platte River. In other words, the primary issue decided in that case was that "waters of the Platte river" could not be lawfully transported "through and across the divide or watershed which separates the Platte river system from the basins of the Blue and Republican rivers (both tributaries of the Kansas river and constituting a part of its system), and therewith irrigate lands situated wholly outside the Platte river valley and beyond the watershed thereof." As hereinafter observed, we have no comparable situation in the case at bar.

Before proceeding further, we point out that defendants and their counsel as well had timely notice and knowledge that plaintiff's application had been filed with the department, together with timely notice and ample opportunity to file a petition attacking its validity within 1 year from September 20, 1957, but they admittedly failed to do so as required by section 46-238, R. S. Supp., 1959. Also, as shown by the opinion in *Ainsworth Irr. Dist. v. Harms*, ante p. ...., defendants and their counsel as well had timely notice and ample opportunity to defend and did defend in that special in rem proceeding and appeal therefrom to this court. Further, defendants and their counsel as well have timely notice and ample opportunity to defend in the case at bar, and they did so. No contention is made otherwise.

We point out also that in this proceeding defendants called but one witness who was a licensed professional consulting engineer in Lincoln. None of defendants testified at the hearing. There is no evidence that defendant Swanson, some of whose land admittedly abutted on the Snake River some distance above plaintiff's proposed dam and reservoir area, ever used any water from or had any appropriation of water from the Snake River, and if he did, every right which he had, if any, was protected by the department's final orders and the law. The same is true of defendant Harms, a part of whose land would be crossed by plaintiff's proposed canal. As said in *Crawford Co. v. Hathaway*, 67 Neb. 325, 93 N. W. 781, 108 Am. S. R. 647, 60 L. R. A. 889, quoted with approval in *Nebraska Mid-State Reclamation District v. Hall County*, 152 Neb. 410, 41 N. W. 2d 397: "While there are some questions affecting property rights which grow out of the administration of the law by the state board of irrigation (now the Department of Water Resources), and in which are involved matters in dispute calling for action of a quasi-judicial character, yet as to all these ample provisions are made for recourse to the courts." We conclude that under the circumstances presented in this case, defendants could not and have not been deprived of any constitutional rights as argued by them.

In *Nebraska Mid-State Reclamation District v. Hall County*, supra, we said: Article XV, section 4, Constitution of Nebraska,

provides: "The necessity of water for domestic use and for irrigation purposes in the State of Nebraska is hereby declared to be a natural want.' A natural want is one absolutely necessary to human existence. Therefore, its legislative conservation and control for such uses is a public purpose." In that connection, Article XV, section 5, Constitution of Nebraska, provides: "The use of the water of every natural stream within the State of Nebraska is hereby dedicated to the people of the state for beneficial purposes, subject to the provisions of the following section." Such "following section" is section 6, which provides: "The right to divert unappropriated waters of every natural stream for beneficial use shall never be denied except when such denial is demanded by the public interest. Priority of appropriation shall give the better right as between those using the water for the same purpose, but when the waters of any natural stream are not sufficient for the use of all those desiring to use the same, those using the water for domestic purposes shall have preference over those claiming it for any other purpose, and those using the water for agricultural purposes shall have the preference over those using the same for manufacturing purposes. Provided, no inferior right to the use of the waters of this state shall be acquired by a superior right without just compensation therefor to the inferior user."

This court has concluded in cases comparable with that at bar that on an appeal to this court from an order of the Department of Water Resources, the primary questions to be determined are generally whether such department acted within the scope of its authority and whether its findings and order complained of are supported by competent evidence or are unreasonable and arbitrary. See *State ex rel. Cary v. Cochran*, 138 Neb. 163, 292 N. W. 239. We conclude that the department had authority to make the findings and orders herein about which defendants complained, and that as hereinafter observed, they were not unreasonable or arbitrary.

The record is voluminous. We can only summarize the relevant and material competent evidence with relation to the primary question of whether the Snake River and the Niobrara River are essentially one stream and a part of the same river basin and watershed, and whether the Snake River exceeds 100 feet in width so that diversion of water therefrom by plaintiff for irrigation purposes would not be a violation of sections 46-206 and 46-265, R. R. S. 1943, as found and adjudged by the Department of Water Resources. In that connection, section 46-206, R. R. S. 1943, provides: "The water appropriated from a river or stream shall not be turned or permitted to run into the waters or channel of any other river or stream than that from which it is taken or appropriated, unless such stream exceeds in width one hundred feet, in which event not more than seventy-five per cent of the regular flow shall be taken." Also, section 46-265, R. R. S. 1943, provides: "The owner

or owners of any irrigation ditch or canal shall carefully maintain the embankments thereof so as to prevent waste therefrom, and shall return the unused water from such ditch or canal with as little waste thereof as possible to the stream from which such water was taken, or to the Missouri river."

The record discloses that the Ainsworth Irrigation District unit is an integral component of the comprehensive "Missouri River Basin Project." The physical and economic feasibility of the Ainsworth unit was approved by the Department of the Interior, and its construction was approved and authorized by the Congress of the United States. The proposed physical facilities of the Ainsworth Irrigation District are demonstrated on a map, exhibit No. 30, prepared by a witness for plaintiff, who was a civil engineer with the Bureau of Reclamation at Ainsworth since 1948, and who has worked on the Ainsworth project making field surveys from the river down to the lands to be irrigated, and in the bureau office making purchasing and cost estimates for feasibility reports. The Snake River flows north and slightly east into the Niobrara River, which first meanders north and east, then gradually turns and meanders east and southeast, and eventually empties into the Missouri River. Plaintiff's proposed Merritt Dam was planned and designed by the head of the earth dam design section of the Bureau of Reclamation in Denver, Colorado. The dam and reservoir will be constructed on the Snake River several miles south of its confluence with the Niobrara River. The dam will be some 140 feet high, with a spillway capacity of 1,150 cubic feet of water per second, and will store some 68,600 acre feet of water for irrigation. Due to high elevation of the area surrounding the dam and reservoir, it is unlikely that any land in the vicinity will be damaged by seepage. Plaintiff's canal, having an initial capacity of 620 cubic feet per second for carriage of water to the unit lands from the dam, will be constructed about 56 miles. It first extends in a northeasterly direction, then gradually east and south, thence northeast to and through the lands to be irrigated, with unused waters eventually emptying into the Niobrara River, where they would have been eventually carried in any event. Enroute, plaintiff's canal will intersect and cross several smaller streams or watercourses, as authorized by section 46-153, R. R. S. 1943, all of which streams are tributaries of and flow north or northeast, where they eventually empty into the Niobrara River. In that connection, the canal will be fenced throughout, and constructed with typical siphons, cross drains, culverts, drops, and checks. Where the canal is above ground water, it will be lined with concrete and in the ground water area it will be given a gravel stabilizing lining. The problem of seepage has been given careful study and losses are expected to be normal, that is, "three-tenths of a cubic foot per square foot of canal perimeter," which has been the bureau's experience in 17 western states.

The project will irrigate 33,960 acres of generally flat and smooth table lands, ideally situated and classified for irrigation, farming, and stock raising. Such lands, with minor exceptions, have a top soil of 18 inches. As shown by a comparison exhibit, the Ainsworth project has the highest benefit cost ratio of seven other units included in the general development plan for the Missouri River basin. The project meets all the feasibility requirements of the federal government, with costs beyond the ability of the farmers to repay being "met by surplus power revenues of the basin-wide project." In computing production with and without irrigation, conservative consideration was given to the "best data \* \* \* available from the State." Thus, it is estimated that by increasing net farm and livestock income by irrigation, the farmers will absorb the reasonable water charges payable without interest over a period of 40 years and greatly improve their financial situation. The evidence shows that from 1928 to 1952, effective precipitation in the area was never sufficient to meet the demands of full crop production except in 1951, and then precipitation was not equitably distributed. Ordinarily, rainfall is sufficient in April, May, and June to give crops in the area a start, but in July, August, and September, when crops are maturing and need for rainfall is greatest, it is generally uncertain and inadequate. Without dispute, dry farming in the area was generally unsatisfactory or impossible, and pump irrigation is generally prohibitive in cost and not an adequate solution for water needs in the district.

The annual flow of the Snake River for 25 years has averaged about 192,300 acre feet of water per year, which is of excellent quality for irrigation, and only 91,800 acre feet annually will be diverted by the project, which represents only about 47 percent of the annual flow of the Snake River at Merritt Dam site. There are only a few small appropriations located upstream having any priority date, and as far as this record shows, no defendant herein holds any appropriation, or makes any claim to use of the water. It appears to be undisputed that there is plenty of water for all needs. The only appropriations downstream are two small power plants owned by Consumers Public Power District, who admittedly will be compensated if they are damaged.

This record does not show any substantial dispute that the Snake and Niobrara Rivers were in fact and law a single stream, basin, or watershed. Defendants called but one witness who became a licensed engineer in 1953 and worked for the Department of Roads and Irrigation on matters other than irrigation until 1956. He had made no field survey of any kind, and testified entirely hypothetically from topographic maps. He never had been employed as a consultant by any irrigation district. He at first defined a watershed as "a divide line where water will run in opposite directions," inferring thereby, as argued by defendants, that the Snake River and every stream or watercourse in the area,

which are all tributaries of and empty into the Niobrara River, had a separate watershed across which plaintiff could not transport water for irrigation, as it proposed to do. However, defendants' witness conceded that another definition of a watershed would place all of the area involved in the Niobrara River watershed. In that regard, he was asked: "Q You have talked about watersheds. A Right. Q What do you understand a watershed to be? A. There are two definitions of watershed. The definition I was using was a divide line where water will run in opposite direction. The other definition would be toward a drainage area that drains into a given creek or stream. Q Within the latter definition, would you say this is all in the Niobrara watershed? A Yes sir." He was also asked: "Q Both surface and underground flow is in that direction? (Northeast) A Generally, they follow the same lines, yes. Q This whole area could be said to be part of the Niobrara drainage area? A That is true, yes sir."

Defendants also offered in evidence from exhibit No. 29, Geological Survey Water Supply-Paper 1371, p. 9, the following: "The Ainsworth unit lies within the Niobrara River basin and is drained by both overland runoff and subsurface outflow to the Niobrara River and its tributaries." Defendants further offered in evidence from exhibit No. 13, the final report of the Department of Interior, p. 55, which assumed that there was no diversion of water from one watershed to another, since the "return flows will naturally find their way and thus be in the same location within the State as though they never had been diverted."

A consulting engineer with offices in Denver was called as a witness by plaintiff. He has continuously practiced engineering since 1919 "entirely within the field of water development" and related matters. He and his firm carry on extensive state, national, and international activities in that field, having other offices in at least five named foreign countries. The record contains a lengthy review of the many projects with which the witness has been or is now associated, including his services as consultant in disputes involving the use of waters in various streams and rivers. Thereafter he defined the pertinent terms "from an engineering standpoint" as follows: "When a river is spoken of, it generally means a river and all its tributaries above a given point, which is the point on the river that is being dealt with. A river and all its tributaries constitutes a watershed, which may be defined as all the area lying within a divide, above a given point on a river or stream. The term watershed is synonymous (sic) with river basin, drainage basin, or catchment area, except in some instances, where by definition for specific purposes, in connection with specific agreements, the basin may have been extended upon the natural watershed." He also cited concrete applications of such definition in several projects. In speaking of the Snake and Niobrara Rivers, he testified: "I defy anyone to delineate a divide between those

two streams. \* \* \* I can't distinguish between the Snake and Niobrara. It is one watershed and no one can define it otherwise." Also, in the final analysis, defendants' only engineering witness did not disagree. In support of his definitions and conclusions aforesaid, and to illustrate previous administrative action by the state department in compliance therewith, plaintiff's witness prepared a large map reflecting all of the streams, systems, basins, and watersheds in Nebraska where irrigation development has occurred. Speaking with reference to defendants' contention, he testified that: "Under that concept there could not have been development of the major projects within the Platte river watershed, nor within the Republican river watershed, nor within the Loup river watershed. Development would be very much more minor than it is at the present time, and probably would be almost nil."

Contrary to defendants' contention, the foregoing evidence adduced by plaintiff was properly admitted for consideration of the department in making its findings and orders. In that connection, we have held that: "Where the general intent of the Legislature may be readily ascertained, yet the language used in a statute gives room for doubt or uncertainty as to its application, courts may resort to historical facts or general information to aid them in interpreting its provisions." *Placek v. Edstrom*, 148 Neb. 79, 26 N. W. 2d 489, 174 A. L. R. 856.

We have also held: "That construction of a statute of doubtful meaning given it by those whose duty it is to enforce it, and which construction the legislature has by its continued noninterference for a number of years acquiesced in, will be approved, unless as thus construed it contravenes some provision of the Constitution, or is clearly wrong." *State v. Bryan*, 112 Neb. 692, 200 N. W. 870." *Chicago & N. W. Ry. Co. v. Bauman*, 132 Neb. 67, 271 N. W. 256.

Also, we have held that: "Long-continued practical construction of a statute by the officers charged by law with its enforcement is entitled to considerable weight in interpreting that law." *Flint v. Mitchell*, 148 Neb. 244, 26 N. W. 2d 816.

Further, we have held that: "When a statute \* \* \* is ambiguous or susceptible of two constructions, one of which creates absurdities, unreasonableness, or unequal operation and the other of which avoids such a result, the latter should be adopted." *Maska v. Stoll*, 163 Neb. 857, 81 N. W. 2d 571.

Webster's New Twentieth Century Dictionary (2d Ed.), Unabridged, 1956, p. 2068, defines "watershed" as: "1. a ridge or stretch of high land dividing the area drained by different rivers or river systems. 2. the area drained by a river or river system." See, also, Webster's New International Dictionary (2d Ed.), Unabridged, 1943, p. 2886, which defines "watershed" as: "The whole

region or area contributing to the supply of a river or lake; drainage area; catchment area or basin.”

In that connection, it is interesting to note that for administrative purposes by the Department of Water Resources, section 46-215, R. R. S. 1943, provides: “The State of Nebraska is hereby divided into two water divisions, denominated water division No. 1 and water division No. 2, respectively.” Also, section 46-217, R. R. S. 1943, provides: “Water division No. 2 shall consist of all lands that may be watered from the Loup, White, **Niobrara** and Elkhorn rivers and their tributaries, and all other lands of the state not included in any other water division.” (Italics supplied.) In such respect, plaintiff’s application was entitled: “Application No. 5218. Water Division No. 2-C.”

As we view it, the Snake River and the Niobrara River are for all intents and purposes but one and the same stream, comprising the same watershed or basin, and could as well have been called the north and south Niobrara. Under the circumstances in this case, a mere matter of having different names does not control the physical attributes or the character of the area through which they flow as one river basin or watershed without any dividing line between them. Cases comparable in all material respects are not cited or found, but statements found in some authorities are helpful in arriving at such conclusion.

In *Dern v. Tanner*, 60 F. 2d 626, it is said: “Tributary waters, branches, are inseparable parts of the main stream, and with it are subject to common appropriation and control in so far as reasonably necessary in irrigation as in navigation.” The Snake River is admittedly a tributary of the Niobrara River.

Also, in *E. C. Horst Co. v. New Blue Point Mining Co.*, 177 Cal. 631, 171 P. 417, citing authorities, it is said: “The mere fact that Wolf Creek has a separate name and extends through another county does not make it less a part of Bear River.”

In *Osterman v. Central Nebraska Public Power & Irr. Dist.*, *supra*, this court took the position that the “Platte river or its tributaries” constitute one stream and basin or watershed. See, also, *Frenchman Valley Irr. Dist. v. Smith*, 167 Neb. 78, 91 N. W. 2d 415, which treated the Frenchman River and Stinking Water Creek as one stream.

We point out again that appellants in *Osterman v. Central Nebraska Public Power & Irr. Dist.*, *supra*, admittedly attempted to transport water by canal from the Platte River basin or watershed across and into the Republican River basin or watershed to therewith irrigate lands situate wholly outside the Platte River valley basin and beyond the watershed or basin thereof. Objectors therein were either appropriators whose rights were based upon state irrigation laws, or riparians whose claims were incident to

and arose out of ownership of and possession of lands bordering upon the Platte River or through which it ran, whose titles were initiated by settlement as early as 1857, and for which government patents issued earlier than 1870. The broad inference to be logically drawn from that opinion is that the state will not give its sanction to an appropriation of water which would in effect remove the waters of a river or stream from its natural basin or watershed and thereby cause it to be transported to another basin or watershed and lost to the communities which have grown up and developed in that basin or watershed. The opinion is entirely distinguishable as we view it from the case at bar on the facts and applicable law.

There is another factor which also becomes important in this case. Such factor is whether or not the Snake River extends 100 feet in width in order to come within the exception provided in section 46-206, R. R. S. 1943.

In that connection, section 46-206, R. R. S. 1943, deals primarily with a limitation of the amount of water that may be appropriated and taken from rivers or streams more than 100 feet wide, and section 46-265, R. R. S. 1943, deals with the return of unused water transported in irrigation ditches or canals by the owner or owners thereof in order to prevent waste thereof. Although at first such sections seemingly are in conflict, in fact they are not if the water of the river or stream from which appropriated and taken is transported by irrigation ditches or canals to lands in the same basin or watershed and the unused water is returned into a river or stream in the same basin or watershed where it naturally would have flowed in any event but for the appropriation and taking.

This record overwhelmingly establishes that substantial relevant portions of the Snake River exceed 100 feet in width and that "there are times when the Snake river has a greater flow, and times when the Niobrara has a greater flow at the point of confluence." Admittedly, plaintiff would take for irrigation only about 47 percent of the Snake River flow. Admittedly, defendants' engineer never visited the area to make any inspection, survey, or measurements of the Snake River. His measurements of the width of the Snake River at some six points thereon were taken from an enlarged reproduction of an aerial photograph obtained from the files of the Department of Roads and Irrigation. Such photograph was admittedly taken September 30, 1939, some 20 years prior to this hearing. In that respect, his testimony that the widest such point on the Snake River was only 83 feet has little or no weight in this proceeding. We again call attention to the fact that such witness also admitted that the entire area here involved was in the Niobrara River basin or watershed.

On the other hand, plaintiff called as a witness a geologist for the Bureau of Reclamation on the Ainsworth project. He was born

and raised in Ainsworth. He testified not only from experience since 1946 as a geologist for the bureau, but from experience in the precise area for 12 years prior to 1943 while doing field work for the American Museum of Natural History. He identified a series of maps prepared by the bureau from field surveys which show that substantial portions of the Snake River exceed 100 feet in width. One such, exhibit No. 64, shows the upper end of the proposed reservoir area behind the proposed Merritt Dam. Such area, exceeding 100 feet in width, is colored blue, and comprises "about 12,000 feet, or somewhat over two miles." Another, exhibit No. 65, reflects an area downstream from exhibit No. 64, and so shows a "comparable" area exceeding 100 feet in width. Another, exhibit No. 66, being the "easternmost section of the three maps," so shows "those portions of the river where the waterway exceeds 100 feet." He testified that the three maps show "a reach of five river miles" where "the stream width exceeds 100 feet \* \* \*". In fact, I know of places below the dam where this river width exceeds 100 feet."

Quadrangle maps appearing in this record also show that the Snake River exceeds 100 feet in width in the same or other areas. In such respect, exhibit No. 69, covering the proposed dam area, shows 10 such areas above the dam site and one below, varying in length from a few hundred feet up to a mile. Exhibit No. 70 reflects some 15 miles of the Snake River on upstream from exhibit No. 69, and shows 24 such areas of the same length. Exhibit No. 71 also joins exhibit No. 70 and reflects about 15 miles of the Snake River. It shows 25 such areas varying in length from a few hundred feet up to three-quarters of a mile.

In the case at bar, the proposed location and construction of irrigation canals and ditches, as well as the lands to be irrigated by the same, are located in and limited to the Niobrara River basin or watershed containing the source of the water to be used. All unused waters will be returned to the Niobrara River, thence to the Missouri River, where they would naturally have flowed in any event through the Snake River and all other tributaries of the Niobrara River which lie in its basin or watershed. To hold otherwise would deprive 33,960 acres of irrigable land of needed water and permit it to be wasted in the Niobrara and Missouri Rivers, without authority of fact and law.

In this case, the orders of the Department of Water Resources properly appropriated and permitted water to be taken from the Snake River, which exceeds 100 feet in width, and is part and parcel of the Niobrara River basin or watershed. The findings and orders of said department are fully supported by the record and law. We conclude that the findings and orders of the Department of Water Resources should be and they are hereby affirmed. All costs are taxed to defendants.

ORDER AND JUDGMENT

On this 3rd day of November, 1960, after due trial and hearing upon the issues made upon the APPLICATION OF RECEIVER FOR A DECLARATION OF HIS RIGHTS and FOR ORDER TO SHOW CAUSE, filed herein on May 21, 1955 (filing 23), and upon the ORDER TO SHOW CAUSE made and entered thereon in this action on May 21, 1955 (filing 24), and thereafter served, and upon and by the many pleadings herein filed in relation to, and after the entry of, such order to show cause; and after due consideration of the pleadings herein and the evidence and testimony presented in such trial and hearing; and the court having prepared and caused to be filed herewith a written memorandum announcing the entry of this order and judgment, and the considerations prompting it, in which are contained findings of fact and conclusions of law; now, therefore, in accordance with such memorandum;

IT IS CONSIDERED, ORDERED AND ADJUDGED:

1. That the findings of fact and conclusions of law set out in such memorandum be taken and considered to be the findings of fact and conclusions of law made by the court upon the issues thus presented;

2. That the ORDER TO SHOW CAUSE, made and given herein on May 21, 1955 (filing 24) be discharged;

3. That, in view of such discharge, the court now declines to make or enter any further order or orders, or judgment or judgments upon the pleadings filed in relation to, and after the

entry of, such order to show cause, or any of them, and remits the several parties, for the presentation of such issues to any appropriate court or courts, or administrative body or bodies, upon the tender therein of appropriate pleadings, and without prejudice thereto from or by reason of any ruling by this court made herein;

4. That, of the taxable costs in this action, so much as have arisen or been incurred or made in consequence of the making and entry of such order to show cause, and the receiver's application therefor, be assessed against the receiver and taxed by the clerk, and as so assessed and taxed, be ordered to be paid by the receiver out of the income or other moneys of his trust in his custody or possession; and,

5. That the clerk transmit forthwith by United States mail copies of this order and judgment, and of such memorandum, to all counsel in the case, and to R. L. Cochran, receiver herein.

BY THE COURT

CONSUMERS PUBLIC POWER DISTRICT, A Public Corporation  
and Political Subdivision of the State of Nebraska,  
Plaintiff in Error,

V.

NORRIS RURAL PUBLIC POWER DISTRICT, A Public  
Corporation and Political Subdivision of the State  
of Nebraska, Defendant in Error.FINDINGS OF FACT, CONCLUSIONS OF LAW  
AND ORDER

This cause came on for trial, and the Court, having considered the evidence, finds the facts and states the conclusions of law as follows:

1. By a petition in error the plaintiff in error seeks to have reversed and vacated a Certificate of Approval of the Department of Water Resources. This Certificate of Approval was given by the Department on January 22, 1959, approving an amendment to the charter of Norris Rural Public Power District so as to change its name to Norris Public Power District and to broaden its powers so as to permit it to do all things permitted by the laws of the State of Nebraska.

2. The statutes which authorize such a Certificate of Approval of the Department of Water Resources are Sections 70-662, 70-663, and 70-664 R.R.S. 1943 which are as follows:

"Section 70-662. (1) A petition for the creation of a district under the provisions of sections 70-601 to 70-679 may be amended, as provided in this section. Any public power district, now existing or hereafter created under the provisions of said sections, may eliminate, detach, reduce, and subdivide area and territory from within the boundaries of such district, if such district does not own or operate any electric light and power plants, lines or systems, or irrigation works within such territory to be so eliminated or detached. Any such district may add to, increase, enlarge its area and territory, or may amend its charter to provide for a change in the general description of the nature of the business in which the district is engaged and the location and method of operation of the power plants and systems or irrigation works of the district proposed in its charter, as long as the plants, systems, and works, the operation of the same, the exercise of powers, and the assumption of duties and responsibilities, of or on the part of such district do not nullify, conflict with, or materially affect those of, or on the part of, any other district.

"(2) Any such district, referred to in subsection (1) of this section, may amend its charter to provide for a change in its name or a change in the location of its principal place of business, and may reduce or increase the number of members of its board of directors. No such elimination or detachment, or increase or enlargement, of the territory of a district, or change in its principal place of business, its name, or the number of members of its board of directors, or change in the general description of the nature of its business or methods of operation, shall occur unless authorized by the affirmative vote of three-fifth of all the directors of the district involved.

"Section 70-663. Upon such authorization occurring, the proposed amendment shall thereupon be submitted to the Department of Water Resources of the State of Nebraska, together with a petition setting forth the reasons for the adoption of such amendment, and requesting that the same be approved. The department shall thereupon fix the time and place for hearing, to be given by publication for three consecutive weeks in two legal newspapers of general circulation within such district. Such notice shall set forth in full the proposed amendment. The cost of such publication shall be paid by such district. Any person residing in such district, or affected by the proposed amendment, may appear at such hearing, and contest the approval by the department of proposed amendment.

"Section 70-664. Unless it shall appear affirmatively that the adoption of such proposed amendment will be contrary to the best interests of such district, or that it will jeopardize and impair the rights of the creditors of such districts, or of other persons, the Department of Water Resources shall issue in duplicate a certificate of approval of such proposed amendment, and cause one copy to be filed in the office of the Secretary of State of the State of Nebraska and one copy to be filed in the office of the county clerk of the county in which is located the principal place of business of the district."

3. As it was organized under the provisions of what is now chapter 70 Article 6 R.R.S. 1943, Norris Rural Public Power District's Petition for Formation or charter recited in part:

"That a general description of the nature, location and method of operation of the proposed **rural** public electric light and power system is as follows:

"The general purpose and object of the creation of such district is to establish and operate a **rural** electric light and power system to furnish electric light and power at low rates to the **rural** inhabitants of said district and adjoining territory. In connection therewith the district is authorized and shall have power:

“First, to construct or purchase, and operate, transmission lines, substations, and service connections to supply where economically feasible, electric light and power to the rural inhabitants within said district and adjoining territory desiring said service.” (Emphasis supplied)

4. On February 7, 1958, Norris Rural Public Power District filed before the Department of Water Resources an “Application for Approval of Amendment of Petition for Creation of Public Power District.” By this Application Norris sought to change its name to Norris Public Power District and to replace the description of its powers as being to serve rural inhabitants with the authority to exercise all powers permitted by the laws of the State of Nebraska. It is unnecessary to relate the background of the approval of the proposed amendment by the directors of Norris Rural Public Power District or the procedure followed by the Department of Water Resources since those are not questioned by the Petition in Error. The contention of the Petitioner in Error, the objector before the Department of Water Resources, which this court is using as the basis for its decision is that the material evidence requires the conclusion that the change in the description of the nature of the business of Norris District will result in conflicts with the objector Consumers Public Power District, and therefore the Department of Water Resources under the foregoing provisions of Section 70-662 R.R.S. 1943, could not approve the Norris petition.

5. Under the holding in **School District No. 49 of Merrick County v. Kreihler**, 165 Neb. 761, 87 N.W. 2d 429, and in **Olsen v. Grosshans**, 160 Neb. 543, 71 N.W. 2d 90, the objector and Plaintiff in Error has predicated error on the insufficiency of the evidence as a matter of law to support the judgment of the Department of Water Resources, and in particular the finding of the Department of Water Resources that it does not appear that upon the adoption of the amendments that the plants, systems and works, the operation of the same, the exercise of powers, and the assumption of duties and responsibilities of, or on the part of, Norris District will nullify, conflict with, or materially affect those of, or on the part of, any other district.

6. The evidence before the Department of Water Resources, which is also before this court, is as follows:

- (a) The evidence of the objector Petitioner in Error, Consumers Public Power District, was that Norris’ lines are located so as to be in a position to sell to towns now receiving their electricity from Consumers; that in the case of one town which had been served by Consumers for many years Norris built new facilities to serve the town and Consumers had to tear out its old ones; that in the case of the City of Beatrice, Norris is taking an elec-

tric load that was served by Consumers; that this lessens Consumers' ability to serve its other customers and has an adverse effect on the sale by Consumers of its bonds.

- (b) None of said evidence of the objector was substantially disputed by Norris, and Norris witnesses affirmatively stated that Norris would continue to operate as it had in the past if this Amendment is approved.
- (c) The only evidence which Norris points to as showing the Amendment will not result in conflict with Consumers is that Norris' directors and manager testified, over objections, that it would not result in such conflicts. This opinion evidence was admittedly based on the further opinion of the witnesses that the Amendment would not cause conflicts because Norris District was already permitted to serve towns such as Beatrice under its original charter. In light of the Supreme Court opinion in **Schroll v. City of Beatrice**, 169 Neb. 162, 98 N. W. 2d 790, the opinion of Norris' witnesses was based on false assumptions and therefore of no probative force (**Puepka v. Iowa Mutual Insurance Co.**, 165 Neb. 781, 87 N.W. 2d 410).

7. There was no probative evidence to support the finding of the Department of Water Resources that the adoption of the Amendment would not result in conflicts with any other district, and the approval of the amendment to Norris' Petition for Formation, and such finding and action by the Department were unreasonable and arbitrary.

8. The probative evidence shows without dispute that Norris had conflicted with the objector Consumers Public Power District in the past by serving towns formerly supplied by Consumers, that this approval of the Department of Water Resources, if affirmed, will result in Norris' continuing such conflicts and that without the approval of this Amendment Norris will have no power to continue such conflicts.

9. The probative evidence shows that the change proposed by Norris in its charter would have the result that the plants, systems and works, the operation of the same, the exercise of powers, and the assumption of duties and responsibilities, of or on the part of Norris Public Power District would nullify, conflict with, or materially affect those of, or on the part of, Consumers Public Power District.

10. There is no evidence to support the contention of Norris that the Department of Water Resources has in the past approved Petitions such as this one of Norris, because there is no evidence showing that conflicts such as these have occurred in other cases.

11. Judgment of an administrative agency must be based on a factual foundation and if material elements have not been given

due consideration the decision is void. (**Block v. Lincoln Tel. and Tel. Co.**, 170 Neb. 531)

IT IS THEREFORE ORDERED ADJUDGED AND DECREED that the Certificate of Approval of the Department of Water Resources dated January 22, 1959, approving amendments to the Petition for Formation of Norris Rural Public Power District is reversed and vacated; the Application for Approval of Amendment of Petition for Creation of Public Power District filed by Norris Rural Public Power District with the Department of Water Resources is dismissed; the Clerk of this Court shall certify this Findings of Fact, Conclusions of Law and Order to the Department of Water Resources; and costs of this action are taxed to the Defendant in Error.

DATED this 27 day of June, 1960.

BY THE COURT:

Paul W. White  
District Judge

ENDORSED: 208-275—FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER — Clerk's Office, District Court, Lancaster County, Nebraska — Filed Jun. 27, 1960 — W. F. Sanders, Clerk District Court.

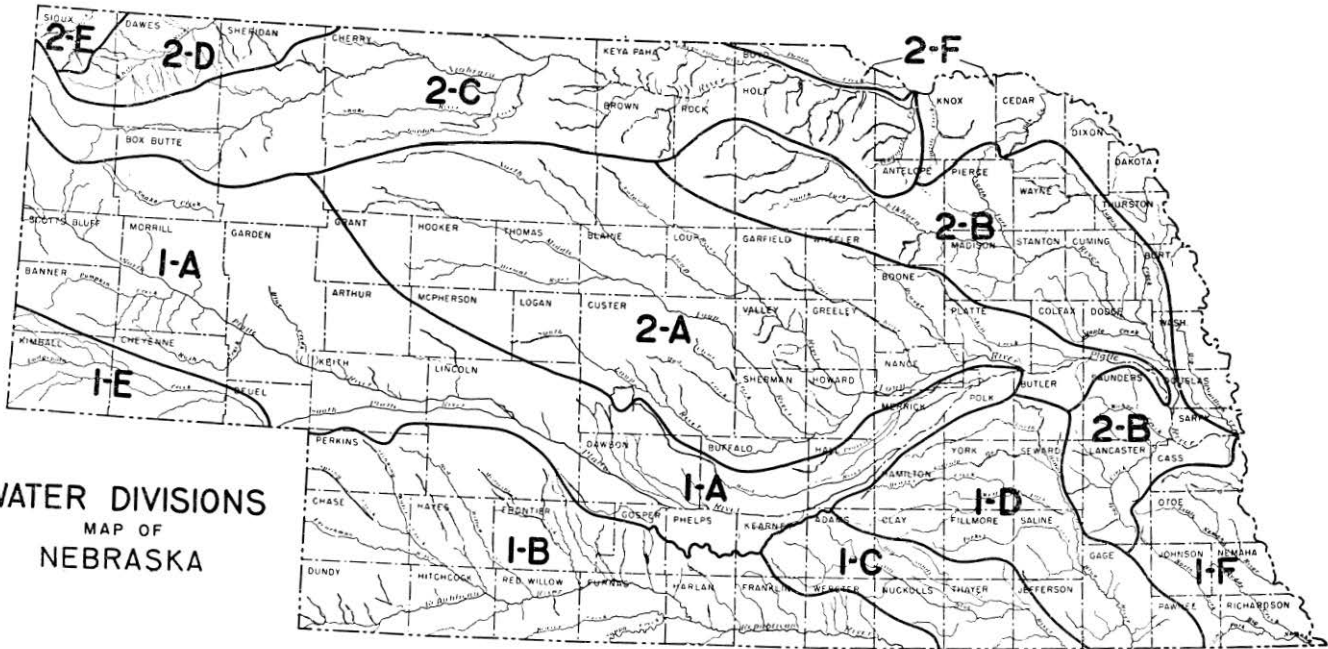

STATE OF NEBRASKA, ) IN THE DISTRICT COURT  
 ) SS OF LANCASTER  
COUNTY OF LANCASTER, ) COUNTY, NEBRASKA.

I, W. F. SANDERS, Clerk District Court, Third Judicial District of Nebraska within and for the County of Lancaster, do hereby certify that the above and foregoing is a true, correct and complete copy of FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER with all the endorsements thereon filed on the 27th day of June, 1960 in a cause in said court wherein CONSUMERS PUBLIC POWER DISTRICT, A Public Corporation and Political Subdivision of the State of Nebraska is plaintiff in Error and NORRIS RURAL PUBLIC POWER DISTRICT, A Public Corporation and Political Subdivision of the State of Nebraska is defendant in error, as the same appears fully upon the records and files of said court and now in my charge remaining as Clerk aforesaid.

WITNESS my hand and the seal of said court at  
Lincoln, Nebraska, this 1st day of July, 1960.

W. F. Sanders  
Clerk District Court

**DIVISION OF STATISTICS**

**WATER DIVISIONS**  
 MAP OF  
 NEBRASKA

**THIS PAGE INTENTIONALLY LEFT BLANK**

**WATER DIVISIONS AND WATER DISTRICTS**  
**WATER DIVISIONS: DENOMINATION**

The State of Nebraska is hereby divided into two water divisions, denominated Water Division No. 1 and Water Division No. 2, respectively. Reissue Revised Statutes, 1943, 46-215.

**WATER DIVISION NO. 1. BOUNDARIES**

Water Division No. 1 shall consist of all the lands of the state drained by the Platte rivers and their tributaries lying west of the mouth of the Loup river; and also all other lands lying south of the Platte and South Platte rivers that may be watered from other superficial or subterranean streams not tributary to the Platte river. Reissue Revised Statutes, 1943, 46-216.

**WATER DIVISION NO. 2. BOUNDARIES**

Water Division No. 2 shall consist of all lands that may be watered from the Loup, White, Niobrara and Elkhorn rivers and their tributaries, and all other lands of the state not included in any other water division. Reissue Revised Statutes, 1943, 46-217.

For convenience in the adjudication of claims and in the distribution of water, these divisions have been subdivided into twelve water divisions, denominated 1-A, 1-B, 1-C, 1-D, 1-E, 1-F, 2-A, 2-B, 2-C, 2-D, 2-E and 2-F, as shown on the opposite page.

## CLAIMS AND APPLICATIONS

The following tables give a complete list of all claims and applications of record in the Department of Water Resources which have not been canceled. This list also includes applications which have been filed and not approved.

The claims and applications have been arranged in each water division by streams in alphabetical order, and the appropriations on each stream are arranged in order of priority.

Appropriations having docket numbers refer to claims covering rights which were acquired under the law prior to April 4, 1895, and those having application numbers were filed to appropriate water under the law of 1895.

Following these tables is a list of water appropriations which have been canceled in full or in part, or which have been dismissed during the past two years.

\* Application pending approval.

\*\*\* Part of appropriation cancelled.

R. Denotes relocation.

\*\* By stipulation entered into by each of the following districts: The Loup River Public Power District is subsequent in priority to Application 2293 filed by the Middle Loup Public Power and Irrigation District, and Application 2312 filed by the North Loup River Public Power and Irrigation District. See Supreme Court Opinion 31410.
