

**STATE OF NEBRASKA
DEPARTMENT OF NATURAL RESOURCES
APPLICATION FOR A PERMIT TO APPROPRIATE WATER**

Complete items 1 through 10 by printing in ink or typing the appropriate information and by placing an X in the appropriate box.	For Department Use Only
1. Name and address of owner of land under proposed project. Names must be exactly as described on the deed or document transferring ownership of property. Landowner must sign the application. The Central Nebraska Public Power and Irrigation District PO Box 740, 415 Lincoln Street Holdrege, NE 68949-0740	Filed in the office of the Department of Natural Resources at <u>8:20</u> ^{XXX} a.m./p.m. on <u>23 November, 2015</u>
E-mail address: _____ Telephone No. (308) <u>995-8601</u>	Application No. <u>A-19400</u>
2. Name, address, and telephone number of applicant if different than landowner.	Map No. _____ Water Division <u>1-A</u> Receipt No. <u>A-4666</u> Amount <u>\$10.00</u> Right ID <u>13068</u>
E-mail address: _____ Telephone No. () _____	_____

3a. A permit is sought to: <input checked="" type="checkbox"/> Use natural flow <input type="checkbox"/> Use impounded water*	3b. A permit is sought for the purpose of: <input type="checkbox"/> Irrigation <input type="checkbox"/> Manufacturing <input type="checkbox"/> Domestic <input type="checkbox"/> Other _____ <input checked="" type="checkbox"/> Temporary** Groundwater Recharge
4a. Identify the source of water (name of stream or reservoir). <u>Platte River</u>	4b. If applicable, identify the facility name for transporting water from the source (portable pump, name of canal or pipeline). <u>Tri-County Supply Canal and Phelps Canal</u>

5. Identify the location of the Headgate Pump

Section 08, Township 13 North, Range 29 E W County Lincoln

The box at left represents one square mile (section). Place an X within each appropriate 40-acre tract to indicate the location(s) of each headgate or pump.

If applicable, indicate the height, in feet, of any diversion or check dams on the line below.

* A separate permit to impound water must be obtained.
 ** A temporary permit may be granted for a maximum of one year.

6. If applicable, identify the location of lands by 40-acre subdivisions that will be irrigated.

LEGAL SUBDIVISIONS	Sec.	Twp.	Rge.	No. of Acres	LEGAL SUBDIVISIONS	Sec.	Twp.	Rge.	No. of Acres
TOTAL NUMBER OF ACRES TO BE IRRIGATED:									0.0

Enclosed is an aerial photograph that I have marked to show the approximate location of land to be irrigated as described above.

7. State the approximate quantity of water desired for
 appropriation. 600 cfs

Gallons per minute
 Cubic feet per second
 Acre-feet (impounded water)

8a. State the estimated time required for completion of all water diversion facilities.
Existing

8b. State the earliest date when water will have been used for beneficial purposes.
09/30/15

9. Will this project be constructed under a federal program, receive federal funding, or have federal planning assistance?
 No Yes If yes, explain: Groundwater recharge will be coordinated with the Platte River Recovery Implementaiton Program (PRRIP)

10. I certify that am familiar with the information contained in this application, and that to the best of my knowledge and belief such information is true, complete and accurate.

9/25/15 Date *Dan Kraus* Signature of owner or owner's authorized agent (with proper documentation)

A final project map may accompany this application or must be filed within six months following departmental approval of this application, drawn in accordance with NAC Title 457 – Rules for Surface Water, Chapter 10, (<http://dnr.nebraska.gov/swr/surface-water-rules>). At the request of the applicant, the Department will assist with preparation of the project map.

This form must be completed in full. An incomplete or defective application will be returned with 90 days being allowed for resubmission. Failure to resubmit a corrected application within this period shall cause dismissal of the application and consequent loss of priority and fees.

A non-refundable filing fee, payable to the Department of Natural Resources, computed from the table below must accompany this application. Forward this application and applicable fees to:

Subject: Application for a Temporary Permit to Appropriate Water for Groundwater Recharge on the Phelps Canal and Funk Lagoon/Waterfowl Production Area in Gosper, Phelps, & Kearney Counties

Enclosed please find an Application for a Temporary Permit to Appropriate Water, a check for the Permit filing fee of \$10.00, a Platte River Hydraulic Analysis, a CD with all data and documents, a narrative describing CNPPID's intentions, and a report describing the project and anticipated operations. This filing is in response to the Department's approval of VAR-5529.

Any notices regarding this application should be sent to Cory Steinke, P.E., CNPPID, PO Box 740, Holdrege, NE 68949-0740.

Sincerely,

Don Kraus, P.E.
General Manager

DEPARTMENT OF
NATURAL RESOURCES

CNPPID's Intentions

Temporary Permit to Appropriate Water for Groundwater Recharge in the Phelps Canal and Funk Lagoon Waterfowl Production Area in Gosper, Phelps, and Kearney Counties

The applicant, The Central Nebraska Public Power and Irrigation District (CNPPID) intends to divert Platte River flows in excess of the U.S. Fish and Wildlife Service's Target Flows (target flows) and state protected flows (as defined in the Nebraska New Depletions Plan) for the purpose of groundwater recharge, in the Phelps Canal and Funk Lagoon Waterfowl Production Area, for the Platte River Recovery Implementation Program (PRRIP) and the Nebraska Department of Natural Resources (Department).

Only at those times when flow in the Platte River exceeds the quantity necessary to satisfy target flows and state protected flows would diversion occur. Included with CNPPID's Petition For Leave is the Platte River Hydraulic Analysis showing that CNPPID expects unappropriated flows in the Platte River.

The hydraulic analysis and description of excess flows or unappropriated water in the Platte River is based on an assumption that, because of the Platte River Recovery Implementation Program, any new appropriations to Platte River water may be limited to only being able to divert water in excess of U.S. Fish and Wildlife Service's "Target Flows." CNPPID is unaware of any formalization of a requirement to protect Target Flows in the seeking or granting of new appropriations. Therefore, CNPPID wants to clarify that this petition requests the next available water in the Platte River based on priority and submission date and that any limitations regarding Target Flows would be those requirements that may be shared by all future appropriations, or as otherwise may be required as a matter of law.

Diversion for groundwater recharge into CNPPID's Phelps Canal would not exceed 600 cfs. The proposed area of groundwater recharge will be the Phelps Canal and Funk Lagoon Waterfowl Production Area as shown on the attached map (Map 2).

Project Description

Parties in the Platte River Basin are in need of projects that can retime excess flows in the Platte River or develop offsets for streamflow depletions. Studies have shown that recharge projects may be able to enhance flows for instream flows and integrated management purposes. CNPPID has existing facilities that can accomplish these needs. However, excess river flows and canal capacities are typically only available during times of reduced or no irrigation demands. This application requests a water appropriation for diverting water into CNPPID's Phelps Canal and Funk Lagoon Waterfowl Production Area (WPA) for the purpose of groundwater recharge for the benefit of Platte River fish and wildlife and for integrated management purposes. Central has existing agreements (included in Exhibit 3) with the Platte River Recovery Implementation Program (PRRIP) and the Nebraska Department of Natural Resources (Department) to provide these types of benefits in association with previous temporary appropriations for recharge, and anticipates entering into similar agreements in conjunction with the use of this appropriation. The project will use Platte River flows in excess of the U.S. Fish and Wildlife Service's (FWS) Target Flows¹ and state protected flows (as defined in the Nebraska New Depletions Plan). A Platte River Hydraulic Analysis summary, which shows the availability of excess flows, and an analysis showing Supply Canal diversions are included in Exhibits 1 and 2, with the data analysis included on the attached 'cd'.

CNPPID will divert surface water from the Platte River at CNPPID's Diversion Dam, near North Platte, Nebraska, through CNPPID's Supply Canal and into the Phelps Canal and Funk Lagoon WPA for the purpose of groundwater recharge. Because CNPPID already utilizes these same facilities for diversion under other more senior appropriations for hydropower production, no additional water would be diverted from the Platte River at the point of diversion under this appropriation. However, under this appropriation the water so diverted could then be further diverted into the Phelps Canal rather than being returned to the Platte River at the Johnson No. 2 River Return (J2 Return) so long as unappropriated flows and flows in excess of PRRIP Target Flows are available.

¹ Taken from the Nebraska Depletions Plan, Platte River Recovery Implementation Program, Attachment 5, Section 8, December 7, 2005, pg 4. PRRIP has adopted these FWS Target Flows. All future references to FWS or PRRIP Target Flows represent the flows referenced in this footnote.

Groundwater Recharge Application

CNPPID seeks to appropriate available excess flows in the Platte River for the purpose of groundwater recharge. The Platte River Hydraulic Analysis summary shows that the Platte River will most likely produce flows in excess of instream flow rights and the FWS Target Flows in the non-irrigation season. This new appropriation would enable CNPPID to divert those excess flows for groundwater recharge into the Phelps Canal and Funk Lagoon WPA.

Project Facilities

CNPPID's Diversion Dam is located just below the confluence of the North Platte River and the South Platte River, east of the City of North Platte, approximately 50 miles downstream from Kingsley Dam, which impounds Lake McConaughy. The Diversion Dam is a combination concrete ogee spillway and radial gate structure extending 874 feet across the Platte River. The Diversion Dam diverts the natural streamflow of the North Platte River and the South Platte River, along with the storage water releases from Lake McConaughy, into the head gates of CNPPID's 75.5-mile-long Supply Canal.

The Supply Canal has a capacity of 2,250 cfs and extends from the Diversion Dam to the J2 Return, located south and east of Lexington. The Supply Canal diverts water on a year-round basis and furnishes water for CNPPID's three hydroelectric generating power plants and the cooling water for Nebraska Public Power District's Canaday Steam Plant. Jeffrey Reservoir and Johnson Reservoir are located along the Supply Canal and serve as regulating reservoirs. The Diversion Dam and Supply Canal are shown on Map 1.

The Phelps Canal is CNPPID's largest irrigation canal. It begins at the J2 Return and consists of 56.9 miles of main canal and 235.6 miles of distribution laterals and buried pipelines. It provides water to land (56,467 irrigated acres in 2012) in Gosper, Phelps, and Kearney Counties. Funk Lagoon WPA is adjacent to the Phelps Canal north of Funk, Nebraska and is able to receive water from multiple points along the Phelps Canal system. The Phelps Canal and Funk Lagoon WPA are shown on Map 2.

Supply Canal Operations

CNPPID diverts water from the Platte River at its Diversion Dam, east of the City of North Platte. CNPPID holds permits to divert natural flow and storage water from the Platte River into the Supply Canal for the purposes of irrigation, power production and instream flows for fish and wildlife. CNPPID normally diverts all water that is available at the Diversion Dam into the Supply Canal, having a capacity of up to a 2,250 cfs, and all remaining water is passed downstream of the Diversion Dam into the Platte River. Typically, water only passes the Diversion Dam if the Supply Canal is diverting at capacity or icing/maintenance issues exists along the Supply Canal, or if CNPPID is in an agreement with another agency to intentionally bypass water past the Supply Canal. Tables 1 and 2 in Exhibit 2 show historic non-irrigation season (September through March) diversions into the Supply Canal and flows passing the Diversion Dam.

Once water is diverted into the Supply Canal at North Platte, the water travels through the Supply Canal system and hydro plants delivering water to irrigation demands and all remaining

water is returned to the Platte River at the end of the system. Often irrigation demand utilizes most of, if not all of, the Supply Canal diversion during the irrigation season while winter diversions into the Supply Canal are typically for power production uses. If the Environmental Account Manager wishes to release Environmental Account water from Lake McConaughy, CNPPID would also divert that water if possible into the Supply Canal and later return it to the Platte River.

Proposed Recharge Operations

CNPPID intends to divert water into the Phelps Canal and Funk Lagoon WPA for the purpose of groundwater recharge. These diversions may occur as long as there is available capacity in the Phelps Canal and water is not being diverted for other purposes or other historic practices. For the purpose of groundwater recharge in the Phelps Canal and Funk Lagoon WPA, diversions shall not exceed a peak flow of 600 cfs. Flow will vary as the Phelps Canal may be filled to normal operating levels and then flows will be reduced to cover seepage rates and maintain canal water levels. The recharge operations could last from September through March if no problems are encountered with canal operations, such as icing, or elevated groundwater levels.

Impacts of Recharge Operations

Impacts to Supply Canal Operations

CNPPID diverts water through its Supply Canal year around for irrigation and hydropower production. This permit request will not change any of CNPPID's historic or future diversion operations. CNPPID will continue to divert all flows possible and pass any remaining flows down the Platte River. Diverting surface water for groundwater recharge only modifies the operations of CNPPID's system, reducing the amount of water returned to the Platte River at the J2 Return.

Impacts to Downstream Appropriators

CNPPID is requesting to divert excess flows into the Phelps Canal and Funk Lagoon WPA in this application. Excess flows are flows in the Platte River that are in excess of target flow requirements established by the PRRIP and in excess of that needed by existing surface water appropriations. A hydraulic analysis is included in Exhibit 1, of this narrative, that illustrates that excess flows at the J2 Return are available. The Department also has published a report, "Evaluation of Historic Platte River Streamflow in Excess of State Protected Flows and Target Flows," which also shows the presence of excess flows at the J2 Return. Since the permit accompanying this request is only requesting to divert into the Phelps Canal at times when excess flows are present and diversions into the Phelps Canal and Funk Lagoon WPA for recharge are not to exceed the amount of excess flows present at any given time, any depletion to J2 Return flows during times of diversion under this permit would not cause harm to any existing surface water appropriations or Target Flows.

Intended Benefits

The PRRIP was developed on January 1, 2007, by the governors of Nebraska, Colorado and Wyoming and the U.S. Secretary of the Interior, to provide defined benefits for four threatened

or endangered species using the Platte River Basin. LB962 was adopted by the Nebraska Legislature in 2004 calling for the management, conservation, and beneficial use of hydrologically connected groundwater and surface water. LB962 requires the development of integrated management plans and offsets for streamflow depletions caused by post July 1, 1997, uses with additional offsets that may be needed to return over-appropriated basins to fully appropriated conditions.

The permit associated with this request is for the diversion of natural flow into the Phelps Canal and Funk Lagoon WPA for the purpose of recharge for the benefit of Platte River fish and wildlife and integrated management purposes. Intended benefits of these diversions are to help reduce the shortages to PRRIP Target Flows and to assist local Natural Resources District(s) and the State of Nebraska in meeting integrated management objectives, including offsetting the impacts of some of the uses which have occurred subsequent to July 1, 1997, as required by the PRRIP and LB962. CNPPID anticipates entering into long-term agreements with these parties to divert water for groundwater recharge for the purpose of meeting their obligations. CNPPID has recently entered into one-year agreements for recharge with these parties making use of temporary appropriations. The anticipated long-term agreements would be similar to the one year agreements, but may contain term limits of up to 30 years.

EXHIBIT 1

Platte River Hydraulic Analysis

The Central Nebraska Public Power and Irrigation District (CNPPID) analyzed Platte River flows at Grand Island, North Bend and Louisville over the past nineteen years (1996-2014) to illustrate the availability of unappropriated water in the Platte River. CNPPID identified the U.S. Fish and Wildlife Service's Target Flows and state protected flows (as defined in the Nebraska New Depletions Plan) as flow requirements that must be exceeded prior to distinguishing unappropriated water. These flow requirements vary throughout the year with the target flows differing for type of year (wet, average, and dry) also.

For the purpose of this hydraulic analysis, CNPPID analyzed the flows in the Platte River that exceed the higher of the "wet" condition daily target flows and instream flow appropriations (such as, Central Platte Natural Resource District's appropriations (A-17004 through A-17009), and Nebraska Game and Parks Commission's appropriations (A-17329 through A-17332)). This analysis conservatively quantifies the amount of excess water available at Grand Island because of the use of the "wet" target flow criteria. Actual conditions for most of, if not all of, the drought cycle were classified as "dry" conditions, therefore the target flows would have been lower and more unappropriated water was in the Platte River than shown in this analysis. CNPPID acknowledges that the state protected flows include Water Action Plans that may utilize some of the unappropriated water in the Platte River, but due to the uncertainty of the projects and required flows, they were not included in this analysis.

The analysis consists of nineteen years of data, 1996 through 2014, to cover a time frame that represents wet, average, and dry years. The attached Platte River Hydraulic Analysis Summary shows the number of days that the Grand Island, North Bend, and Louisville river flow exceeds the requirements, the annual amount of unappropriated water at each location, and the annual amount of unappropriated water available at CNPPID's J2 Return for the past nineteen-year period.

The analysis shows unappropriated water in the Platte River for all but one year at Grand Island and every year at North Bend and Louisville. It is evident that the limiting factor for available unappropriated water at the J2 Return is the flow requirements and flow conditions at Grand Island. There seems to be around one-third of the amount of unappropriated water at Grand Island as there is at North Bend and Louisville over the analyzed period.

Days of Excess at Grand Island (Using FWS “Wet” Target Flows, NGPC and CPNRD rights)

**WATER SERVICE AGREEMENT – RECHARGE FROM EXCESS FLOWS
BETWEEN
THE CENTRAL NEBRASKA PUBLIC POWER AND IRRIGATION DISTRICT,
NEBRASKA COMMUNITY FOUNDATION and
PLATTE RIVER RECOVERY IMPLEMENTATION PROGRAM**

THIS AGREEMENT made and entered into this 26th day of November, 2014, by and between The Central Nebraska Public Power and Irrigation District, a public corporation and political subdivision of the State of Nebraska, with its principal office located at 415 Lincoln Street, P.O. Box 740, Holdrege, NE 68949-0740, hereinafter referred to as "Central" and the Nebraska Community Foundation (representing all signatories to the Platte River Recovery Implementation Program), a Nebraska non-profit corporation, with its principal office located at 3833 South 14th Street, Lincoln, Nebraska 68502, hereinafter referred to as "Foundation," and the Platte River Recovery Implementation Program, with its principal office located at 4111 4th Avenue, Suite 6, Kearney, Nebraska 68845, hereinafter referred to as "Platte Program," (jointly referred to as "Parties" and individually as "Party."

WITNESSETH:

WHEREAS, Central is the owner of the Phelps Canal as shown on Exhibit A; and

WHEREAS, Central filed in September of 2013 with the Nebraska Department of Natural Resources (hereinafter "DNR") a "Petition for Leave to File an Application for a Temporary Permit to Appropriate Water for Groundwater Recharge on the Phelps Canal in Gosper and Phelps Counties" (hereinafter "Appropriation"); and

WHEREAS, the Platte Program desires Central to augment Platte River stream flows via groundwater recharge; and

WHEREAS, Central desires to provide such recharge services.

NOW, THEREFORE, IN CONSIDERATION of the mutual covenants and agreements herein contained and the terms and conditions hereinafter set forth, it is hereby covenanted and agreed:

1. WATER SERVICE.

a. During the term of this Agreement, Central will provide the Platte Program with groundwater recharge via seepage through the Phelps Canal for the purposes described above equal to fifty percent (50%) of the Total Amount Diverted, as hereinafter defined, up to 4,000 acre feet of diversions, then 100% of any diversions in exceedance of 4,000 acre feet in the non-irrigation season. The Total Amount Diverted shall be measured by Central using the Phelps Canal measuring flume located at milepost 1.6 on the Phelps Canal (including water diverted and not available for recharge because of evaporation). The Total Amount Diverted will be adjusted by subtracting any deliveries or releases made by Central from the Phelps Canal and for the difference in storage in the canal at the end of the irrigation season (likely early September 2015), at the end of each subsequent quarter or billing period, and at the beginning of the next irrigation season (likely mid-April 2015). The non-irrigation season will begin when Central stops releasing water into sections of the Phelps Canal for irrigation and end when Central begins releasing water into sections of the Phelps Canal for irrigation, as determined by Central.

b. Central may make reasonable adjustments in the Total Amount Diverted as necessary to account for similar operations from other water sources, or for other reasons as may be appropriate. Central shall consult with the Platte Program in making such adjustments. All data used by Central regarding the Total Amount Diverted calculations shall be shared with the Platte Program.

c. Central may reduce or suspend groundwater recharge diversions under this Agreement for good cause, including but not limited to maintenance on the canal, construction on the canal, or if high groundwater levels are observed, as determined by Central.

2. **WATER SERVICE CHARGES.** The Foundation shall pay Central for the water service described above as follows:

a. A Water Service Charge as shown in Exhibit B per acre-foot for the Platte Program's share of the Total Amount Diverted, adjusted according to provisions in paragraph 1 above. All measurements made through Central's measuring device and so recorded by Central operating personnel shall be considered final. Central shall invoice the Foundation for the water service charges quarterly beginning January 1, 2015. Payment shall be due within 60 days of invoice.

3. **TERM.** The term of this Agreement shall commence when this Agreement is signed by the Foundation, the Platte Program, and Central (the "Commencement Date"), and shall expire on December 31, 2015.

4. **DATA SHARING.** Central and the Platte Program agree to share all hydraulic and hydrologic data collected in association with this Agreement.

5. **WATER APPROPRIATIONS.** The source of supply shall be water which is available pursuant to the Appropriation. The water service described herein shall be subject to the DNR approving such Appropriation. The water delivered pursuant to this Agreement shall be consistent with and limited to the terms and provisions of the Appropriation.

6. **FORCE MAJEURE.** Central shall not be liable for any delay or failure to perform its obligations under this Agreement caused by an event or condition beyond the reasonable control of, and without the fault or negligence of Central, including, without limitation, failure of facilities, flood, earthquake, storm, lightning, fire, severe cold or other weather event, epidemic, contamination, war, terrorist act, riot, civil disturbance, labor disturbance, accidents, sabotage, or restraint by court or restrictions by other public authority which delays or prevents performance (including but not limited to the adoption or change in any rule, policy, or regulation or environmental constraints imposed by federal, state or local governments), which Central could not reasonably have avoided by exercise of due diligence and foresight. Upon the occurrence of such an event or condition, the obligations of Central under this Agreement shall be excused and suspended without penalty or damages, provided that Central shall give the Platte Program notice describing the particulars of the occurrence or condition, the suspension of performance is of no greater scope and of no longer duration than is required by the event or condition, and Central proceeds with reasonable diligence to remedy its inability to perform and informs the Platte Program of the actions taken to remedy the consequences of the event or condition.

7. **DEFAULT.** If any Party to this Agreement fails to perform or otherwise breaches any of the terms of this Agreement, then such failure shall constitute a default. In the event of default by any Party, the non-defaulting Party/s shall give written notice of the default to the defaulting Party. Following such written notice, the defaulting Party may cure the default within thirty (30) days. Upon cure, this Agreement shall remain in full force and effect. If the defaulting Party fails to cure, the non-defaulting Party/s shall be entitled to any and all

legal and equitable remedies except Central's total liability to the Platte Program and Foundation for any loss or damage, including but not limited to special and consequential damages, arising out of or in connection with the performance of this Agreement shall not exceed either the amount of Water Service Charges paid by the Foundation to Central pursuant to this Agreement or \$50,000, whichever is less.

8. ENTIRE AGREEMENT. This Agreement contains the entire understanding of the Parties hereto with respect to the water service contemplated hereby and supersedes all prior agreements and understandings between the Parties with respect to such subject matter.

9. AMENDMENT. No amendment to this Agreement shall be valid unless it is in writing and signed by the Parties hereto.

10. BINDING EFFECT. This Agreement shall inure to the benefit of and be binding on the Parties, their successors and assigns. This Agreement may not be assigned by the Platte Program or the Foundation without the written consent of Central.

11. GOVERNING LAW. This Agreement shall be governed by and construed in accordance with the laws of the State of Nebraska.

IN WITNESS WHEREOF, the Parties hereto have executed this Agreement the date first stated above.

**WATER SERVICE AGREEMENT – RECHARGE FROM EXCESS FLOWS
BETWEEN
THE CENTRAL NEBRASKA PUBLIC POWER AND IRRIGATION DISTRICT
AND NEBRASKA DEPARTMENT OF NATURAL RESOURCES**

THIS AGREEMENT made and entered into this 26th day of November, 2014, by and between The Central Nebraska Public Power and Irrigation District, a public corporation and political subdivision of the State of Nebraska, with its principal office located at 415 Lincoln Street, P.O. Box 740, Holdrege, NE 68949-0740, hereinafter referred to as "Central" and the State of Nebraska, acting by and through the Nebraska Department of Natural Resources, with its principal office located at 301 Centennial Mall South, Lincoln, NE 68509-4676, hereinafter referred to as "State," (jointly referred to as "Parties" and individually as "Party.")

WITNESSETH:

WHEREAS, Central is the owner of the Phelps Canal as shown on Exhibit A; and

WHEREAS, Central filed in September of 2013 with the Nebraska Department of Natural Resources (hereinafter "DNR") a "Petition for Leave to File an Application for a Temporary Permit to Appropriate Water for Groundwater Recharge on the Phelps Canal in Gosper and Phelps Counties" (hereinafter "Appropriation"); and

WHEREAS, the State desires Central to enhance Platte River stream flows via groundwater recharge; and

WHEREAS, Central desires to provide such recharge services in the portion of Phelps Canal highlighted in red on Exhibit A.

NOW, THEREFORE, IN CONSIDERATION of the mutual covenants and agreements herein contained and the terms and conditions hereinafter set forth, it is hereby covenanted and agreed:

1. WATER SERVICE.

a. During the term of this Agreement, Central will provide the State with groundwater recharge via seepage through the Phelps Canal for the purposes described above equal to fifty percent (50%) of the Total Amount Diverted, as hereinafter defined, up to a 4,000 acre feet limit of Total Water Diverted in the non-irrigation season. The Total Amount Diverted shall be measured by Central using the Phelps Canal measuring flume located at milepost 1.6 on the Phelps Canal (including water diverted and not available for recharge because of evaporation). The Total Amount Diverted will be adjusted by subtracting any deliveries or releases made by Central from the Phelps Canal and for the difference in storage in the canal at the end of the irrigation season (likely early September 2015), at the end of each subsequent quarter or billing period, and at the beginning of the next irrigation season (likely mid-April 2015). The non-irrigation season will begin when Central stops releasing water into sections of the Phelps Canal for irrigation and end when Central begins releasing water into sections of the Phelps Canal for irrigation, as determined by Central.

b. Central may make reasonable adjustments in the Total Amount Diverted as necessary to account for similar operations from other water sources, or for other reasons as may be appropriate. Central shall consult with the State in making such adjustments. All data used by Central regarding the Total Amount Diverted calculations shall be shared with the State.

c. Central may reduce or suspend groundwater recharge diversions under this Agreement for good cause, including but not limited to maintenance on the canal, construction on the canal, or if high groundwater levels are observed, as determined by Central.

2. WATER SERVICE CHARGES. The State shall pay Central for the water service described above as follows:

a. A Water Service Charge as shown in Exhibit B per acre-foot for the State's 50% share of the Total Amount Diverted, adjusted according to provisions in paragraph 1 above. All measurements made through Central's measuring device and so recorded by Central operating personnel shall be considered final. Central shall invoice the State for the water service charges quarterly beginning January 1, 2015. Payment shall be due within 60 days of invoice.

3. TERM. The term of this Agreement shall commence when this Agreement is signed by the State and Central (the "Commencement Date"), and shall expire on December 31, 2015.

4. DATA SHARING. Central and the State agree to share all hydraulic and hydrologic data collected in association with this Agreement.

5. WATER APPROPRIATIONS. The source of supply shall be water which is available pursuant to the Appropriation. The water service described herein shall be subject to the DNR approving such Appropriation. The water delivered pursuant to this Agreement shall be consistent with and limited to the terms and provisions of the Appropriation.

6. FORCE MAJEURE. Central shall not be liable for any delay or failure to perform its obligations under this Agreement caused by an event or condition beyond the reasonable control of, and without the fault or negligence of Central, including, without limitation, failure of facilities, flood, earthquake, storm, lightning, fire, severe cold or other weather event, epidemic, contamination, war, terrorist act, riot, civil disturbance, labor disturbance, accidents, sabotage, or restraint by court or restrictions by other public authority which delays or prevents performance (including but not limited to the adoption or change in any rule, policy, or regulation or environmental constraints imposed by federal, state or local governments), which Central could not reasonably have avoided by exercise of due diligence and foresight. Upon the occurrence of such an event or condition, the obligations of Central under this Agreement shall be excused and suspended without penalty or damages, provided that Central shall give the State notice describing the particulars of the occurrence or condition, the suspension of performance is of no greater scope and of no longer duration than is required by the event or condition, and Central proceeds with reasonable diligence to remedy its inability to perform and informs the State of the actions taken to remedy the consequences of the event or condition.

7. DEFAULT. If any Party to this Agreement fails to perform or otherwise breaches any of the terms of this Agreement, then such failure shall constitute a default. In the event of default by any Party, the non-defaulting Party/s shall give written notice of the default to the defaulting Party. Following such written notice, the defaulting Party may cure the default within thirty (30) days. Upon cure, this Agreement shall remain in full force and effect. If the defaulting Party fails to cure, the non-defaulting Party/s shall be entitled to any and all legal and equitable remedies except Central's total liability to the State for any loss or damage, including but not

limited to special and consequential damages, arising out of or in connection with the performance of this Agreement shall not exceed either the amount of Water Service Charges paid by the State to Central pursuant to this Agreement or \$50,000, whichever is less.

8. ENTIRE AGREEMENT. This Agreement contains the entire understanding of the Parties hereto with respect to the water service contemplated hereby and supersedes all prior agreements and understandings between the Parties with respect to such subject matter.

9. AMENDMENT. No amendment to this Agreement shall be valid unless it is in writing and signed by the Parties hereto.

10. BINDING EFFECT. This Agreement shall inure to the benefit of and be binding on the Parties, their successors and assigns. This Agreement may not be assigned by the State without the written consent of Central.

11. GOVERNING LAW. This Agreement shall be governed by and construed in accordance with the laws of the State of Nebraska.

IN WITNESS WHEREOF, the Parties hereto have executed this Agreement the date first stated above.
